 flow of gases over reactive surface 3=21423
 in flowing fluids, bibliographic review 0=10631
 flux effects, synthesis of CaWO_4 and ZnSiO_4 : Mn
 with KCl or LiSO_4 4=10211
 formulation 0=18426
 Frank-Condon principle appl. to electron transfer in
 aqueous soln. 3=8943
 in free molecule flow 0=3302
 free radical formation in cyclohexane- O_2
 system 1=20727
 gas absorption and evolution, at const. press., meas. by
 automatic apparatus 4=13701
 gas evolution rates, measurement 4=23637
 in gas flows around lamina, temp. distrib. 0=14674
 gas mixtures, bimolecular reaction, heat flux 1=6567
 gas mixtures, doubly reacting 4=2144
 gas phase, deductions from statistical mechanical
 theory 1=11616
 gas-phase photochem. reactions, Slater's new
 approach 3=11357
 gas-solid reactions, const. pressure-differential gas
 apparatus 2=4534
 gaseous detonations 1=20740
 gases, use of greaseless, non-absorbing vacuum
 valve 1=6915
 gases, reacting, dynamical treatment 2=12958
 graphite, energy release on irradiation 4=12832
 halogen dissociation, in shock waves 2=10974
 halogenated pentaboranes, fragmentation patterns 0=21271
 at high pressure, explosive decomposition theory 2=6873
 hot-atoms, average collisional energy loss
 evaluation 4=26735
 "hot" atom reactions, kinetic theory 4=26734
 hot and thermal, comparison 0=3297
 hydrated electrons and var. substance 4=20073
 hydrodynamics of chemically reacting fluids 0=14109
 hydrolysis of KCN, ultrasonic meas. of rate 3=8952
 hydroxyl radicals in shock waves 0=6408
 inert gases, recombination rate constants, three-
 body 4=17852
 in internal flow systems, non-isothermal homog.
 reaction 0=8297
 iodine recombination rate, spectroscopy 1=10586
 ion recombination rates, gaseous 4=18694
 ionic decomposition processes, effect of initial
 prep. 4=13706

Reaction kinetics—contd

- ionic reactions, effect of inert salts 2=19135
 isobutyl radicals, thermal reactions 3=3390
 isomeric reactions 1=1472
 isomerization of isobutyl radicals 3=8948
 isopropyl iodide, pyrolysis 4=25631
 isotope effects, meas. method 0=14113
 isotope effects, secondary 0=14115-16
 ketene, photochemical dissociation, rel. to unimolecular
 reaction rate theory 0=15683
 in laminar boundary layer 0=6397
 laminar flames 0=6401
 long chain molecules 3=5157
 long chain molecules 3=25817
 in luminescent solids 1=6223
 malonic acid, decarboxylation, "exact" normal
 frequencies 4=13703
 mass spectra, quasi-equilibrium theory, improved
 expression 2=23951
 using mass spectrometer, time-of-flight type, pulse
 generator system 4=17855
 mass spectrometric observation 4=16563
 metal-gas reactions, with particulate product
 growth 3=18431
 mixing apparatus for observation 4=23634
 multiple zone reactions, first- or second-order kinetics,
 conditions 3=25810
 n.m.r. study, effect of fluctuating fields 3=15379
 naphthalene, electron transfer from negative ion, rel. to
 ESR 1=14803
 Navier-Stokes detonation problem, for small
 reaction rates 1=4097
 negative temperature production 4=4689
 nitrosylhydroxylaminesulphonate ion, decomposition, acid
 catalysed 3=20980
 one-dimensional condensed system 0=3296
 organic iodides, pyrolysis 3=16157
 oscillator systems, with statistical energy exchange in
 collisions 2=3679
 oxidation, gas, 1-100 msec. by adiabatic com-
 pression 3=20981
 oxide films, parabolic growth law 4=26745
 oxides, oxygen pressure series of chem. potentials 3=3391
 particle growth processes, statistics 4=2158
 pearlite nucleation rate, in Fe-C alloys 0=18393
 photochemistry, avoidance of explicit solns. of diff.
 equn. 4=29229
 photoconductivity and luminescence model 2=6487
 photosynthesis, flashing light spectrophotometer 4=16234
 plane detonation waves 0=16772
 polyatomic molecules, bimolec. pre-association and
 decomposition 4=9798
 polyethylene, irradi., trapped radical
 disappearance 2=16564
 polymerization 1=20734
 polymers, effects of neighbouring groups 3=8949-51
 polymethylmethacrylate, surface degradation 0=3309
 polypropylene, irradi., trapped radical
 disappearance 2=16564
 polyvinyl chloride, γ -irradi., kinetics of radical
 reactions 1=1489
 precipitation in alloys 4=23246
 precipitation, quasi-periodic; in interdiffusion of
 two subs. 3=8957
 precipitation, quasi-periodic, in interdiffusion of two
 substances 2=15123
 primary intramolecular kinetic isotope effect in
 nonequilibrium system 3=11347
 proton transfer in acid-base reactions 4=29210
 pyrolysis of cyclopropane and cyclobutane, isotope
 effects 3=8961
 quantum theory 4=4688
 quasiequilibrium rates, quantum calc. 4=62
 quaternization of poly (4-vinyl pyridine) with n-butyl
 bromide, steric hindrance 4=7741
 radiolysis, pulse apparatus for obs. 4=26763
 rate constants, calc. from transition-state
 theory 2=19133
 rate constants at low concentrations 0=8315
 rate theory, transmission coefficient 3=6909
 reactant isolation, one-dimensional systems 3=8946
 reacting gas mixtures, "thermal conductivity" 1=20726

Reaction kinetics—contd

- reaction rate of expanding fluid, effect on velocity of sound 0=10722
- reactive diffusion in crystals 0=6055
- reactor for high boiling liquids in gas phase 1=10293
- rearrangement collisions, quantum-mech. transition-complex theory 2=19141
- reflected-shock technique 0=16377
- use of reflected shock waves 3=13594
- relaxations, meas., temperature jump appar. 3=5158
- rotating anharmonic diatomic mols., unimol. rate theory 3=6907
- sarcosine zwitterion form, protolysis, n.m.r. meas. 4=2150
- scattering matrix and reaction rates 2=2444
- sec-butyl radicals, decomposition, unimolecular reaction theory 0=21274
- sec-deuterobutyl radicals, activated, unimolecular decomposition 0=8301
- self-heating chemical, criticality criteria 1=4092
- shock tubes, low-density type 1=2783
- simultaneous reactions, reciprocity relation 2=6875
- size effects among isotopic molecules 0=21265
- small systems 3=8964
- small systems, stochastic approach 4=23629
- solid-state reactions, kinetic model 1=11613
- solids, chemical equilibrium, activity coeffs. of electrons and holes 0=15914
- solids, with imperfections 0=4295
- solubility with gas-in-liquid reaction 2=2713
- spectrometer for observation 4=18404
- statistical computation of reaction probabilities 1=20725
- statistical mechanics and ion decomposition reactions and stability 3=19375
- statistical mechanics of reactive fluids 4=6662
- statistical thermodynamics, conditions for validity 2=21580
- steady-state unimolecular processes in multilevel systems 3=13596
- symmetry number and reaction rates 3=18429
- tert-butyl bromide, decomposition rate, comparative meas. with single-pulse shock tube 4=15838
- tert-butyl chloride, decomposition rate, comparative meas. with single-pulse shock tube 4=15838
- tert. butyl iodide-HI-isobutylene, equil. 2=19139
- thermal decomposition of diatomic molecules 0=3298
- thermal decomposition of tert-butyl cpds. at high temp. 4=15839
- thermal, along dislocations 3=8958
- thermally activated processes, frequency factors 1=4266
- thermochemical action, of ionizing radiation 2=4559
- thermodynamic pots. for reacting gas mixtures, new classes of 4=7739
- thermodynamic prop. meas. by dielectrometric titration temp. var. 4=23626
- thermodynamic relations for three-dimensional systems 0=19527
- thermokinetic potential, rel. to stable steady state 3=1878
- 3-body gas-phase reactions, cross-sections, phase-space theory 4=23627
- transport of solid through gas phase 2=23948
- tunnelling correction, approximate expression 4=7743
- and turbulence, in pipe, mass transfer 3=14103
- unimolecular, anharmonic effects 3=10489
- unimolecular, anharmonicity in vibrational state sums 4=24069
- unimolecular decomp. of chem. activated propyl radicals 3=20993
- unimolecular decomposition, near threshold 2=6874
- unimolecular gas reactions, theory 0=8302
- unimolecular rate const., comparison of integrals 0=14101
- unimolecular rate theory 0=6406
- unimolecular rates, due to multiple critical oscillators 2=4528
- unimolecular rates, strong collision theory, quantum-mechanical formulation 4=23628
- unimolecular reactions, anharmonicity 1=20724
- unimolecular reactions, chemical theories, comparison 3=16153
- unimolecular reactions, comparison of classical theories 2=8907

Reaction kinetics—contd

- unimolecular reactions, computation of statistical complexions 2=17085
- unimolecular reactions, high frequency factors 0=1948
- unimolecular reactions, high-frequency factors 1=10292
- unimolecular reactions, oscillator models 1=20728
- unimolecular reactions, oscillator models 4=26733
- unimolecular reactions, for vibr. excitation 3=3386
- unimolecular, statistical complexion calc., anharmonicity effects 4=13707
- unimolecular, transition-state theory 1=12320
- vacuum meas. apparatus 4=17854
- vapour phase, four-centre reactions 4=7742
- variational theory, three-body recombinations 0=8299
- waves in reactive media 2=19528
- Zircaloy-2, in dry air, at high temps. 0=12102
- Al films, oxide formation 0=8335
- Br and isotopic hydrogen mols. 4=29208
- Br, recombination rate constants, three-body 4=17852
- CD₄, unimolecular, statistical complexion calc. 4=13707
- CF₃ + CHD₃, H-D kinetic isotope effect 2=23955
- C/H system, equilibrium composition at high temp. 2=12348
- C₂H₂ + D₂O = C₂D₂ + H₂O, exchange equil. 4=30894
- 2C₂H₅NH = (C₄H₈NH)₂, in CCl₄, equil. 2=10961
- CN, formation and reaction in shock waves 2=6879
- C₂N₂, decomposition 2=12349
- CO, formation on incandescent W 2=8911
- CaO = Ca(g) + O₂, by mass spectr. 3=3379
- CdSe, impurity incorporation 3=13590
- Cl + HCl and Cl + DCl exchange rates, D-isotope effect, and tunnel effect models 4=29206
- Ce(SO₄)₂, aq. soln., radiation-induced reduction 1=1420
- Co-Cl complexes in methanol, kinetics of methanol exchange of solvation shell, -80° to +80°C 4=27201
- [Co(MeOH)₅Cl]⁺ in methanol, kinetics of methanol exchange of solvation shell, -60° to -80°C 4=27200
- Co-Pd oxidation, anomaly at Co Curie point 3=20982
- Cu, sulphurization mechanism 0=21268
- Cu-S, scale formation, causes and mechanism 4=23640
- D₂ abstraction from CD₄, (CH₃)₃CD, Cl₂, CD₄, rate consts. and activation energies 4=30895
- Fe oxidation to wüstite, rate law transition 4=10635
- Fe(NH₄)₂(SO₄)₂, aq. soln., radiation-induced oxidation 1=1490
- GaP with H₂O, and GaP range of stability 4=13709
- Ge, donor reactions 1=19854
- Ge iodides, reduction by H 4=13708
- Ge surface reaction with I 1=11612
- H atom catalysed gas-phase recombination at high temp. 3=16165
- H atom recombination on Al surfaces 4=13721
- H-atom recombination, ionic catalysis 3=16164
- H atoms with HCl and Cl₂, competitive rates 1=10294
- H atoms, hot, billiard-ball collisions 2=4561
- H atoms and molecules, with I atoms and molecules 2=10966
- H, ortho-para conversions and isotope exchanges 0=3293
- HBr chain reaction, effect of periodic pressure change 2=4535
- H and D atoms, with trans-butene 2=21586
- H-D isotope effect, at high temp. 2=4532
- H-D kinetic isotope effect, in reaction CF₃ + CHD₃ 2=23955
- H and D, dissociation rates 2=14333
- HI addition to isobutene and vinyl chloride 3=11338
- HI with ethyl iodide 3=20978
- HI, gas phase addition to ethylene 3=6915
- HI gas-phase reaction with CH₃I 3=11339
- HI with propylene 2=21582
- H₂, NH₃ and CH₄ with mixtures of (O + O₂) 4=4693
- H₂, o-p conversion 4=25646
- H₂ oxidation 4=17858
- H₂-Br₂, rate in nonsteady state, 1000°-1600°K 4=7744
- H-D, electrolytic, separation 0=748
- H + H₂ exchange reaction 4=17857
- H₂ + H, H₂ activated complex formation, calc. 0=1514
- H-I, D kinetic isotope effect 4=7745
- HI gas-phase addition to butene-2 4=26750
- H and N interaction with Mo ribbon 1=11600

Reaction kinetics—contd

- $\text{H}_2\text{--O}_2$, origin of OH chemiluminescence 4=13705
 H_3O^+ + substrate \rightarrow product reaction, D isotope effect 1=15195
 H_2SO_4 , dissociation 0=18433
 He , recombination rate constants, three-body 4=17852
 $\text{He}^+ \text{--H}_2$ and He--H_2^+ reactions, cross-sections, phase-space theory 4=23627
 He_2^+ formation 4=2145
 $\text{Hg } 6(^3\text{P}_0)$, with nine gases, spectroscopic meas. 2=6877
 I atoms, recombination in foreign gases 0=5868
 I lamps with W filaments, W deposition study 4=26741
 I , recombination rate constants, three-body 4=17852
 $\text{K} + \text{CH}_3\text{I}$, reactive collisions in molecular beams 4=28290
 $\text{K} + \text{HCl}$ and $\text{K} + \text{HI}$, in crossed molecular beams 4=28289
 K--NH_3 soln., decomposition, e.p.r. study 3=3381
 N_2 , recombination rate constants, three-body 4=17852
 N_2 , shock heated, recombination rate 2=7566
 NH_3 synthesis, activation energies 2=15138
 $\text{NH}_3 + \text{BF}_3$, kinetic isotope effect 1=6568
 NO decomposition rate between 3000 and 4300°K 1=7904
 NO , shock tube study, 3000°–8000°K 2=15134
 NO^+ , in upper atmosphere, formation 2=8985
 $\text{N} + \text{O}_3$, mass spectrometry 2=8909
 $\text{NO} + \text{N}$, low reactant partial pressure 2=2443
 $\text{NO} + \text{NO}_2 + \text{H}_2\text{O} \rightleftharpoons 2\text{HNO}_2$, vapour phase equilibrium 4=15835
 $\text{NO} + \text{O}_3$, in supersonic nozzle 4=7752
 N_2O , decomposition, shock-tube meas. 4=29216
 N_2O , thermal decomposition, by shock waves, 1500–2500°K 4=15834
 N_2O_4 , dissociation, u.s. study 2=4530
 $2\text{NO} + \text{F}_2 = 2\text{ONF}$, dilute diffusion flame study 0=16374
 NaN_3 photolysis 1=20758
 Ni ferrite, Ni formation by diffusion 1=7902
 Ni--Br , surface reaction, press. and temp. var. 4=10636
 O -atom reactions with olefins 3=11341
 O atoms, addition to olefins 0=21273
 O atoms with NO and NO_2 , mass spectra study 4=29215
 O atoms, recombination 0=18430
 O atoms, recombination, in absence of O_2 0=18429
 O atoms, recombination rates 0=6405
 O atoms, three-body recombination 0=20679
 O_2 , recombination rate constants, three-body 4=17852
 O_2 , dissociation in microwave discharges, catalytic effects of foreign gases 0=7737
 O_3 , decomposition 0=18431-2
 $\text{O} + \text{NO} + \text{M} \rightarrow \text{NO}_2 + \text{M}$ and $\text{O} + \text{N}_2\text{O} \rightarrow 2\text{NO}$, rates 2=4529
 $\text{O} + 2\text{O}_2 \rightarrow \text{O}_3 + \text{O}_2$, rate const. 4=15836
 $\text{P}(\text{CH}_3)_3 + \text{BF}_3$ 1=6569
 Pb azide, initiation by high-intensity light 4=30898
 Pt and Zr , attack of HBr , effect of α -ray irradiation 0=12100
 SO_2 , aq., ionic dissociation, rel. to u.s. absorpt. 2=5012
 Si crystal growth from SiCl_4 , decompos. 3=13423
 SrO , on W 0=3308
 UC_2 + graphite 2=7471
 UO_2 , hydrofluorination, optical interference meas. 3=24043
 XeF_4 and XeF_2 with NO and NO_2 4=23630
in ZnS:I vapour-solvent growth system, solid transport rate 4=15768
 Zr , in dry air, at high temps. 0=12102

Recombination

See Ions, recombination; Semiconductors

Recording

See also Sound recording

- cosmic ray data, multichannel transistorized apparatus 1=13538
d.c. response of mag. recording head 0=2424

 resistivity meas. by mutual inductance method 1=16204
 resistivity transistor-based meter 1=10651
 resistor, steplessly variable, water tank type 1=2924
 rutile, piezoresistivity 0=7949
 Saran charcoal rods, rel. to adsorbed water 4=30604
 semiconducting diode, tunnel, negative, meas. 3=22964
 semiconducting layers, measurement 2=2187
 semiconducting thin layers, meas. method 4=28552
 semiconductor—insulator—metal capacitors, impedance 4=12950
 semiconductors, bridge circuit for measurement 1=9518
 semiconductors, meas. at high frequencies 4=17485
 semiconductors, non-ohmic behaviour, acoustoelec. current 3=2876
 silicone polymer thin films, 500-2500 Å, negative 4=22768
 sodium tungsten bronze 1=11259
 solid cylinder with concentric spherical cavity 1=10485
 solids, impurity, theory 3=22885
 strip conductors with rt.-angle bend 3=9712
 sulphide films, dark resistivity 4=20810
 suspension, and particle size 4=10655
 tetracyanoquinodimethane, pressure effect 296°K 4=30602
 thermistor using BaTiO₃ 1=14494
 thermistors, as l.f. circuit elements 4=18641
 thermistors, l.f. wave filters 0=12572
 thermo e.m.f. rel. to 3=23025
 thin film resistances 1=6441
 toroidal coil, reduction by var. cross-section 4=18656
 tunnel diode negative resistance measurement 1=7661
 unit, meas., review, absolute, rel. to international 3=21189
 water, measured to det. cleanliness 0=110
 Wheatstone bridge, high resolution type 1=263
 Wheatstone bridge, precision type 2=1345
 wires, in arbitrary mag. field 4=441

Resistance, electrical — contd

A plasma jet 2=1459
 Ag binary terminal solid solns., temp. coeff. 4=22685
 Ag, effect of solutes on resistance minimum 0=20862
 Ag films 4=13674
 Ag films, effect of O₂ 4=26014
 Ag films, on glass and quartz, temp. depend. 1=2548
 Ag films, variations, causes, at -130° C 1=17614
 Ag, in point defects study, review 1=14249
 Ag, surface resistance 1=6201
 Ag whiskers, rel. to temperature 4=4124
 Ag wires, cold-worked and annealed 2=4335
 Ag—In, anelastic piezoresistance 4=12847
 Ag—Pd alloys, residual resistance 1=5002
 Ag—Pd, at low temp. 0=9942
 Ag—Zn, anelastic piezoresistance 4=12847
 Al alloys, at low temp. 0=6083
 Al films, rel. to oxidation thickness change 4=20801
 Al, 14-655° C, rel. to vacancy conc. 0=4315
 Al, in magnetic field up to 27 kOe, 4.2° and 20.4°K 4=28528
 Al oxide films, negative resistance 3=20321
 Al, rel. to plastic stretching at 78°K 1=11252
 Al, recovery 60° to 200°K, rel. to cold-working in liq. H₂ 4=12850
 Al, stage I recovery from neutron-irradiation 4=4097
 Al, rel. to vacancies, dislocations, and stacking faults 3=22891
 Al—Mg dil. alloys, rel. to vacancy—impurity interaction 3=22746
 Al₂O₃, effect of H-ion bombardment 0=20865
 Al₂O₃ films, negative 4=22760
 Al₂O₃ films, voltage depend., tunnelling 1=3731
 Al—Sn dil. alloys, rel. to Sn—vacancy interactions 3=22744
 Al—Zn, short-range order effects 1=14354
 Au, effect of solutes on resistance minimum 0=20862
 Au, exploding wire, behaviour at different current densities 1=16300
 Au films and contacts 3=15537
 Au, rel. to lattice vacancies 3=22883
 Au, low-temp. minimum, effect of plastic deformation 0=2847
 Au, monocrystals, meas. by a.c. method 0=1611
 Au, in point defects study, review 1=14249
 Au, stage I recovery from neutron-irradiation 4=4097
 Au, surface resistance 1=6201
 Au, rel. to vacancy density 1=3654
 Au, rel. to vacancy density 1=7577
 Au—Ag alloys, quenched-in 4=12848
 Au and Ag at low temp. 1=7615
 Au—Cu and Au—Cu—Ni alloys 0=4373-4
 Au—In alloys, quenched-in 4=12848
 Au—Mo, at low temp. 0=9942
 Au—Pd, at low temp. 0=9942
 Au—Rh, at low temp. 0=9942
 B, rhombohedral, 77-2000°K 0=560
 Ba, vs. pressure, 4-lead meas. system 4=30612
 BaTiO₃ ceramics, temp. var., anomalous, -180° to +200° C, intergranular barrier model 3=25399
 Be films, condensed on cold substrates, modifications 1=15179
 Be, resistivity, rel. to temperature 4=1561
 Bi, non-ohmic behaviour, acoustoelec. current 3=2876
 Bi, pressure effect 4=28760
 Bi, surface resistance and Fermi surface 2=2071
 Bi, thin films, temp. coeff., thickness depend. 0=10027
 Bi, vs. pressure, 4-lead meas. system 4=30612
 Bi and Bi—Sb alloys, var. with grain size 3=20323
 Bi—Te solid solutions, 77°-300°K 4=10045
 Bi₂Te₃, piezoresistance, deformation potl. and conduction band ellipsoids 0=17989
 Bi₂Te₃, rel. to pressure 4=10044
 Bi₂Te₃, rel. to pressure up to 200 000 kg cm⁻² 4=1616
 Bi Ti₂O₁₂ single crystals 4=23335
 C, fixed cracked resistors, current noise 1=7088
 C, rel. to low-temp. thermometry 1=2909
 C, thermometer, rel. to magnetic field at low temp. 1=10625
 Ca ferrite, Y₂O₃-doped 4=6951
 Cd films, rel. to adsorption 4=20326
 Cd, rel. to impurity 3=25324
 CdS, electron irradiated, intercrystal energy barriers 0=604
 CdS films, formed by co-evaporation, increase 4=29183

Resistance, electrical—contd

CdS films, vacuum-deposited 4=20805
 CdTe, rel. to pressure up to 200 000 kg.cm⁻² 4=1616
 Ce, effect of high pressures 1=14356
 Ce, effect of high pressures 1=17604
 Co, low temp., effect of domain structure 4=28529
 Co—Pt alloys, rel. to prelim plastic deformation 4=22981
 Co—WC 1=9144
 Cr films, residual resistivity, rel. to imperfections 4=20329
 Cr, influence of alloying 1 at. % V, Mn, Fe, Co or Ni 0=13844
 Cr—Fe alloys, temp. depend. 0=7910
 Cr₂O₃, effect of impurities of equal or lower valency 4=28612
 CrTe_x 3=23464
 Cs films, thickness depend. 0=1615
 Cs, liquid 1=15900
 Cs—Bi, thin films, rel. to structure 1=15142
 Cu alloys, with Cd, In, Sn, Sb, annealed, rel. to internal adsorption 0=14064
 Cu, effect of solutes on resistance minimum 0=20862
 Cu films, condensed on cold substrates, modifications 1=15179
 Cu, plastically deformed, temp. depend. 1=14358
 Cu, in point defects study, review 1=14249
 Cu, residual resistance at 4.2°K 1=6124
 Cu, residual resistance, theory 0=9292
 Cu, strip cold rolled from powder, along and across rolling direction 3=22900
 Cu, surface resistance 1=6201
 Cu whiskers, rel. to temp. 4=4116
 Cu—Al neutron irradiated 1=19821
 Cu—Au alloys, at low temp. 1=17606
 Cu₃Au 1=11255
 Cu₃Au, after quenching, long-range order 3=20889
 Cu₃Au, annealed, above critical temp. 2=2110
 Cu₃Au, short-range order effects 1=14354
 Cu and Cu alloys, rel. to stacking-fault electron scattering 3=22785
 Cu—Fe alloys 1=17413
 Cu—Mn, anelastic piezoresistance 4=12847
 Cu—Mn, temp. depend. 0=20868
 Cu—Ni alloy 0=4373-4
 Cu₂Pd alloys, residual resistance 1=12653
 Cu—Si—(Mn) alloys, rel. to deformation and annealing 3=22701
 Cu—Zn, anelastic piezoresistance 4=12847
 Cu—Zn, residual resistance 0=6024
 Dy films, spin-ordering effects 3=15547
 Dy, temp.—press. range 77° to 200°K and 15 to 120 kbar 4=30607
 Dy, vs. pressure, 4-lead meas. system 4=30612
 Er, vs. pressure, 4-lead meas. system 4=30612
 Eu, vs. pressure, 4-lead meas. system 4=30612
 Fe, effect of domain structure at low temp. 0=2846
 Fe, effect of pressure 0=11831
 Fe films, condensed on cold substrates, modifications 1=15178
 Fe, low temp., effect of domain structure 4=28529
 Fe, pure and doped, rel. to neutron-irrad. 4=12857
 Fe, vs. pressure, 4-lead meas. system 4=30612
 Fe wires, hydrogen-charged 3=10721
 Fe—Al alloys 0=20867
 Fe—Al alloys, rel. to short-range order 1=19828
 Fe—Al alloys, temp. depend. anomalies 1=12412
 Fe—Cr alloys, rel. to magnetic props. 0=4480
 Fe in Cu alloy, minimum 0=20861
 FeCr, short-range order effects 1=14354
 Fe—Mo alloys, resistivity, rel. to quenching temp. 4=1949
 Fe—Ni alloys, effect of pressure 0=11831
 Fe—Ni alloys, under isotropic compression at low temp. 0=13775
 Fe and Ni films evaporated in mag. fld, anisotropy 3=4120
 Fe—Ni films, rel. to magnetic field direction 4=28532
 Fe—Si, transverse effects 0=11666
 Ga, vs. pressure, 4-lead meas. system 4=30612
 GaAs_{1-x}P_x semiconducting p-n junctions, temp. var., direct—indirect transition 3=25377
 GaP crystal from vapour phase 1=20418
 GaP, n-type, rel. to temp. and press. 1=17735
 GaSb, n- and p-type 1=17733
 GaSb, n-type, rel. to press., 200°–400°K 1=17735

Resistance, electrical—contd

(90%)Ga₂Se₃—(10%)GaSe, anomalies 1=10072
 GaSe, rel. to temp. 4=12879
 Gd films, spin-ordering effects 3=15547
 Ge, As-doped 1=10042
 Ge, As-doped 1=17688
 Ge, effect of pressure and carrier mobilities 1=1056
 Ge, films, in ultra-high vacuum and acceptor levels 3=20309
 Ge, rel. to low-temp. thermometry 1=2909
 Ge, negative resistance characteristic, oscillations in mag. field 4=12897
 Ge, by photoconductive investigation 1=11325
 Ge, by photoconductive investigation 1=17801
 Ge, piezoresistance 0=6092
 Ge, thin films, 0=586
 Ge—GaAs n-n heterojunction, rel. to junction bias 4=12926
 GeSe, (100°–800°K) 1=8953
 Hg plasma, impedance characteristics 2=1425
 I, effect of pressure 1=10050
 I₂, up to 200 000 atm 1=3729
 In, rel. to impurity 3=25342
 In, surface impedance at 3000 Mc/s 1=14361
 InP, n-type, rel. to temp. and press. 1=17735
 InP, pressure depend., at 77 and 300°K 0=4362
 InSb, rel. to temperature—pressure phase diagram 3=20771
 K, changes at He temp. in pulsed mag. fields 4=4121
 K, films, thickness depend. 0=1615
 K, residual resistance, strain dependence 0=20870
 KCl, a.c. polarization effects 2=2112
 La, effect of high pressures 1=14356
 La, effect of high pressures 1=17604
 Li ferrite—chromite, 20° C to Curie pt. 4=4383
 Li, pressure coeff. at low temps. 3=22895
 Mg alloy, at low temp. 0=6083
 Mg, anisotropy in mag. field at 4.2°K 1=3726
 Mg—Mn dilute alloys, temp. depend. up to 33°K 0=17999
 MgO, effect of H-ion bombardment 0=20865
 Mn—Zn alloys, temp. depend., liq. H₂ and He temp. 0=6084
 Na₂WO₃, single crystals 2=2116
 16% Nb—Zr alloy, 475°–575° C, rel. to $\beta \rightarrow \alpha$ transform. 4=23281
 Nd, effect of high pressures 1=14356
 Nd, effect of high pressures 1=17604
 Ni binary alloys, short-range order effects 1=15128
 Ni, during film formation, effect of elec. field 0=8283
 Ni, effect of pressure 0=11831
 Ni films, with adsorbed H 1=11599
 Ni, films, effect of adsorption of Ba 3=13040
 Ni films, effect of annealing 1=10027
 Ni, films, effect of O₂ and BaO adsorption 3=20271
 Ni films, evaporated, rel. to thickness 4=17477
 Ni, low temp., effect of domain structure 4=28529
 Ni, after plastic deform. 3=20206
 Ni, Raney, diaphragm resistance 4=26758
 Ni wire, effect of ambient gas pressure 1=7613
 Ni—Au, decomposition study 0=14075-6
 Ni—Co alloys, after plastic deform. 3=20206
 Ni—Cr film resistors, stabilization rel. to annealing effects 4=26562
 Ni—Cr films on ceramic, temp. coeff., -55° to +150°C 1=8926
 Ni—Cr films, temp. coeff. 2=2120
 Ni—Cr films, vacuum-deposited on glass, rel. to thickness and composition 4=20809
 Ni—Cr solid solutions, rel. to composition 1=5034
 Ni—Cr—Fe alloys, 20–900° C, Lorentz number calc. 4=15424
 Ni₂Cr, anomalous 1=7612
 Ni—Cu alloys, effect of pressure 0=11831
 Ni—Cu alloys, rel. to magnetization 0=6074
 Ni—Cu alloys, after plastic deform. 3=20206
 Ni—Fe alloys, rel. to deformation and tempering 4=7437
 Ni_(1-x)Li_xO, room temp. to 700° C 4=12907
 Ni₂Mn alloys, residual resistance 1=12653
 NiO(Fe₂O₃)_{0.55} 1=1082
 Ni—Ta alloys 4=26273
 Ni—Ti solid solutions, rel. to composition 1=5034
 Ni—V solid solutions, rel. to composition 1=5034
 Os compounds 4=1618

Resistance, electrical—contd

- P, rel. to thermal cycling 4=10436
 P, up to 200 000 atm 1=3729
 Pb films, on glass and quartz, temp. depend. 1=2548
 Pb, rel. to impurity 3=25324
 PbS up to 200 000 kg cm⁻² 4=10061
 PbSe up to 200 000 kg cm⁻² 4=10061
 PbTe, p-type, piezoresistive effect 0=7943
 PbTe, rel. to pressure up to 200 000 kg/cm² 4=1616
 PbTe thin films 4=23583
 PbTe up to 200 000 kg cm⁻² 4=10061
 Pd and Pd-alloys, containing H, in acidic solutions 0=236
 Pr, vs. pressure, 4-lead meas. system 4=30612
 Pt, anisotropy in mag. field at 4.2°K 1=3726
 Pt, rel. to contact with H₂, air, Ar 4=10034
 Pt, low temp. precision thermometry 0=7002
 Pt-10%Rh, small diameter wires, 600-1450°C 2=1306
 Pu alloys, unusual behaviour 4=17542
 Pu, increase rel. to self-irradiation damage 3=22856
 PuC, up to 1200°C 4=4175
 Pu and δ Pu—Al rel. to order-disorder change 1=20622
 Rb films, thickness depend. 0=1615
 Re, alloyed with Au, Ag, Cu, down to liq. He temp. 4=22681
 Re alloys, pressure and temp. coefficients, meas. 1=19831
 Ru compounds 4=1618
 S, temp. var., polycrystalline 3=10839
 Sb, 90 k bars, rel. to phase transformations 4=4501
 Sc, vs. pressure, 4-lead meas. system 4=30612
 Se, dark-resistance variations, crystallization 0=10282
 Se, effect of pressure 1=10050
 Se—Ag, temp. depend. 0=10282
 Se—Pt, temp. depend. 0=10282
 SiC resistors, dynamic V-I characteristics 0=15886
 Si—SiO₂—metal diodes, S-type negative resistance and "multiple negative resistance characteristics" 4=30637
 Sn, critical resistance, at supercond. transform. 0=12563
 Sn, grey, 0.1-283°K 0=9931
 Sn, hysteresis loops, superconductivity 0=2287
 Sn, rel. to impurity 3=25324
 Sn, liq. He temp. 0=9932
 Sn, thin wires, rel. to temp. and thickness 2=2114, 23240
 Sn, vs. pressure, 4-lead meas. system 4=30612
 Sn, superconducting, surface impedance changes 4=16369
 Sn superconductor, microwave impedance rel. to direct current 4=16371
 Sn in Cu alloy, minimum 0=20861
 Ta films, rel. to sputtering time 4=20811
 Ta—C, rel. to composition 3=25368
 Ta—O, anelastic piezoresistance 4=12847
 Tb films, spin-ordering effects 3=15547
 Te, zone refined, as purity test 0=13963
 ThC, up to 1200°C 4=4175
 Ti rel. to 4 at.% Al, Mo, Cr, Re, Pd, Ta, La additions 4=22687
 TiC, rel. to vacancies 4=26017

- proton magnetic resonance 0=4537
- radiation damage effects on ferroelec. and mech. props. 3=10883
- Raman spectra, H-bond bands, rel. to temp. 4=10176
- Raman spectrum, H bond, para-ferroelectric transition mechanism 3=20484
- sound absorpt. near upper Curie pt., frequency depend. 3=2726
- thermoluminescence after γ -irrad. 2=14759
- u.s. absorption near Curie pt. 2=16600
- u.s. effects on phys. props. 2=16972
- unipolarity, changes due to prolonged field action 1=19922
- water molecule bonds, orientation 0=15781
- X-cut, complex permittivity meas. 0=2302
- X-irradiated single crystals, paramagnetic resonance 1=11487
- X-rays effects, on anomalous props. 0=11741
- Cu²⁺ doped, effect on "delayed phenomena" 3=25404
- KNaC₄H₄O₆·4H₂O, dislocations and fine lines 1=12393

Rock magnetism

- (Heading introduced in 1962)
- anhysteretic remanent magnetization in small steady fields 2=6671
- apparatus, new magnetometer 3=9905
- basalt in hole EM 7, Mohole project 3=9137
- basalts, from Victoria (Australia), magnetization stability 3=1495
- Britain, Devonian, revised 3=16309
- chlorophaeite, effects of heating 3=1499
- data rel. to geomag. field in remote times 3=1484
- demagnetization by constant and variable fields 2=18902
- demagnetizing factor rel. to magnetization and susceptibility 3=11064
- and earth field reversal 4=26866
- and earth mag. polarity reversal 4=23812
- and earth radius increase 4=20845
- and earth rotation, fossil 3=11465
- electrical properties, equiv. cct. determ. 3=19135
- and evolution of earth-moon system 3=9136
- ferrimag. mineral component Curie pt. determ., high-freq. method 4=28830

rock magnetism—contd

- ferromagnetic composition, a.c. field detm.
method 3=13847
- ferromagnetic phase constitution determ. without
separation 4=10777
- geomagnetic total force, secular variation over last
5000 years 4=2329
- Great Dyke, S. Rhodesia, palaeomag. 3=11480
- haematite-ilmenite solid solns., magnetization 3=3523
- hematitic body, massive, mag. characteristics 3=1494
- igneous and metamorphic, susceptibility anisotropy 3=1493
- igneous and metamorphic, thermoremanent
magnetization directions, mod. stress effects 2=4704
- low temp. "cleaning" 4=29344
- magnetic anomaly, total intensity, digital computer
calc. 4=15900
- magnetic permeability, equiv. cct. determ. 3=19135
- magnetite and hematite, mag. props. 3=13845
- magnetite, mag. transformation and domain
structure 3=9138
- magnetization time effect 4=26876
- magnetometers 4=3082
- meas., astatic magnetometer, optimum sample
size 3=12287
- measurement coils, sensitivity maximization 4=4828
- mesozoic rocks of Eastern Australia 3=18578-82
- multidomain partially magnetized system,
stress effects 2=4705
- plutons, granitic, Upper Cretaceous, California 3=18577
- pressure effects, unidirectional, meas. 3=1498
- random magnetization, ang. dispersion 4=23820
- remanent magnetization, stress stability 2=4706
- remanent moment, temp. var. meas. 3=14708
- self-reversal in synthetic ilmenite-hematite solid
solutions 3=18576
- self-reversed and field-reversed rocks,
distinguishability 3=3522
- serpentine from Sierra Nevada, remanent, induced and
total magnetism 3=11476
- shale, cont. pyrrhotite, reversed on heat
treatment 2=24067
- single-component specimens, thermomagnetization
characteristics 3=13846
- small, randomly directed moments in demag. rocks 3=13848
- susceptibility anisotropy 3=11477
- susceptibility of stressed rock 2=24064
- susceptibility, total and anisotropic, meas. 3=14718
- tabular bodies, long, mag. anomalies, interpretation,
standard curves 3=16310
- thermochemical remanent magnetization 3=11479
- thermoremanence, single to multi-domain trans-
itions 3=5228
- thermoremanent magnetization, inversed-type,
production 3=11065
- thermoremanent magnetization in multidomain
grains 2=24065-6
- thermoremanent and viscous magnetization components,
separation by a temp. method 4=4829
- transitional layers between zones of direct and
reverse mag. 4=2328
- Welsh slates, susceptibility anisotropy rel. to bulk
susceptibility 3=11478
- FeO-Fe₂O₃-TiO₂, mag. props. 3=1497
- FeTiO₃-Fe₂O₃, reverse thermoremanent
magnetization 3=1496

Rockets

- acoustic properties, liquid and solid-propellant
rockets 3=11864
- Aerobee, ionospheric electron density det. 0=14208
- Aerobee-150, measurements of ionosphere electron
density 1=7936
- use of α -sources for low thrust sources 4=13975
- anomalous radiation at 310-340 km over Atlantic,
space-rocket results 2=11085
- Astrobee 200, ionosphere meas. instruments 3=5213
- astronomical-instrument carrying 0=10531
- atmos. temp., 100-150 km, by Na cloud
ejection 1=10319

 atomic systems, resonance, theory 2=10226
 atomic systems, resonance, theory 3=6368
 backscatter from inhomogeneous media 3=11676
 backscattering from conducting cylinder with surrounding shell 1=373
 Born expansion, optimization 3=11699
 bound states embedded in continuum and formal theory 3=14900
 central potential scattering, Brysk and determinantal approxs. 3=11702
 Chandrasekhar's formulation, uniqueness problems 4=14021
 with classical central-field repulsive forces, analytic approach 0=17686
 classical treatment for large angles 2=15458

Scattering—contd

- on cones, finite, backscattering 0=17106
- Coulomb field, phases and amplitudes 3=9346
- Coulomb Green's function, nonrelativistic 3=11701
- in crystals, group theory 1=17392
- definition of operator, algebraic 4=19428
- diffusion-type variable-order approximation, multiple scatt. 4=14019
- dissipation functions and invariant imbedding 0=19004
- distorted-wave approx. for phase shifts 3=17198
- domination by Gribov-Pomeranchuk fixed singularities, arguments against 4=25034
- dual diagrams in perturbation theory 1=2020
- elastic waves by cylinder 0=14718
- equilibrium, dynamical derivation 1=5205
- fibres, simplified cylindrical distrib. function 2=15083
- fourth-order amplitude with two complex invariants 0=16606
- Fredholm integral eqn. with Green's function kernel 4=5023
- general class of scatt. problems 2=19383
- grey, Rayleigh phase function 0=16634
- hard core due to orthogonality constraints 3=5364
- inverse problem in quantum theory 3=7123
- inverse problem, rel. to transmission 2=9407
- isotropic grey, stellar radiation 0=19001
- isotropic, in semi-infinite atmosphere, H-functions 0=19002
- J.W.K.B. phase shift and classical angle of deflection, calc. 4=14022
- Jost functions and potentials, singularities 2=11244
- length, and effective range in two-body problem 0=11106
- Lippmann-Schwinger eqns., field of validity 3=21243
- Mandelstam representation, quasipotential character 3=19560
- molecular beams, rainbow effect 3=6439
- multichannel, in Hilbert space, integral equations 0=337
- multichannel, nonrelativistic quantum mechanical theory 0=11109
- multiple, mean spatial and projected angles, theory 3=17211
- multiple scattering, new expansion formula 1=8072
- multiple scattering, theory 1=19029
- multiple scattering of waves 1=10571
- one-dimensional wave, phase-shift method 1=2707
- operators, integral representation 2=21836
- partial wave amplitude, essential singularity 3=22077
- perturbative expansion for large ang. momenta 4=5993
- phase of scattered waves 0=2498
- phase-shift calc., Pais method 0=12852
- phase shifts for low-energy scatt. 4=2573
- plane wave by double periodic surface of arbitrary shape 2=5089
- plane wave by fundamental surfaces for mixed boundary conditions 4=5021
- plane wave by potential, approx. for partial waves 2=13266
- plane wave by special potential well, phase-shifts 0=20063
- plane waves at apertures in plane screen 3=17
- potential, "invariant imbedding" techniques 3=11700
- potential, non-relativistic, dispersion rels. 2=3283
- potential, phase shifts and bound state energies 3=7124
- potential scattering, Mandelstam representation 0=12849
- quantum-mechanical, wave packet theory 3=3755
- radiation, statistical geometric basis 3=14041
- radiative transfer, generalized scatt. functions 4=100
- radiative transfer, three-dimensional solns. 4=5109
- random, amplitude and phase distrib. 2=15492
- random distrib., free-space scatterer formalism 2=19381
- random distrib., two-space scatterer formalism 2=19382
- random volume scattering, theory 4=27026
- ray pencil from point source, isotropic 4=14056
- recurrence relations, calc. of radial part of ang. momentum matrix 3=3756
- representation of scatt. amplitude, component 4=836
- Riccati eqn., application 3=11662
- S-matrix expansion, two lemmas 2=3277
- S-matrix invariance 0=17259
- S-matrix and scatt. operator from wave operators 2=21835
- S-matrix theory, "time interval" notion 2=19436

Scattering—contd

- scalar field, on spherically symmetric scatterer, dispersion relations 0=17261
 - scattering operator, existence 3=16536
 - Schrödinger, scatt. causality condition 4=21048
 - Schrödinger's eqn. solution, with holomorphic potential function quasi-classical approx. 3=23763
 - Schrödinger's operator, trace formulae in 3-dimens. space 2=15489, 19438
 - semiconductors, degenerate, ionized impurities 2=12507
 - single-body, theory, literature review 2=7402
 - singularities in the left half-plane 3=24628
 - small-angle critical scatt. from cooperative assemblies 3=52
 - spheres and cylinders, poles, Hankel function zeros 3=17053
 - theory, multiple scattering 4=14018
 - thermal radiation in polydisperse turbid medium 4=14441
 - three-body operator in nonequil. statist. mech. 4=88
 - treatment of exchange 3=19566
 - two-channel problem, complex ang. momentum 2=20276
 - unitarity 2=21830
 - variational principle for scattering phases 1=454
 - vector wave eqn., variational princs. 3=17056
 - wave function, quantum, one-centre expansion 3=3758
 - wave scattering by irregular surfaces, exact solution 1=5332
 - of waves in dense distributions of large tenuous scatterers 4=14020
 - waves, by dislocations 2=6342
 - waves, fluctuating, by large objects 3=18703
 - waves, by many discrete objects, literature review 2=7408
 - waves, multiple scatt. by arbitrary objects 2=2599
 - waves and particles by inhomogeneous regions 2=2598
 - WKB phase-shifts, second order 2=19440
 - Yukawa potential scattering, partial wave amplitudes 0=17253
 - Al, inelastic : elastic scattering cross section ratio 3=20974
 - Au, by $K\alpha$, 10-1000 eV, energy, by calorimetry 3=5724
 - C, inelastic : elastic scattering cross-section ratio 3=20974
 - Cr, inelastic : elastic scattering cross-section ratio 3=20974
 - Ge, inelastic : elastic scattering cross-section ratio 3=20974
 - H atoms, on nuclei 1=19575
 - H atoms, on nuclei 3=4701
 - Pd, inelastic : elastic scattering cross-section ratio 3=20974
 - Pt, inelastic : elastic scattering cross-section ratio 3=20974
- acoustic waves**
- angular distrib., meas. by directional array 2=19663
 - Arctic pack ice, acoustic backscatt. strengths 4=29259

Scattering, particles—contd

- multichannel, variational principl. 2=5585
 multiparticle, systematic soln. using Lippmann-Schwinger eqn. 4=9134
 multiperipheral model, diffraction scatt. 3=17222
 multiperipheral model, diffrn. scatt. 4=3337
 multiperipheral model, high-energy integral eqn. 2=22431
 multiperipheral model, scatt. amplitudes 3=19556
 multiperipheral, rel. to singular Bethe-Salpeter eqns. 4=11938
 multiple, in absorber between 2 collimators 2=1670
 multiple, correction for energy losses 3=24667
 multiple Coulomb, meas. in emulsions 1=13282
 multiple Coulomb, in nuclear emulsions 3=8063
 multiple Coulomb, relativistic energy meas. 0=1260
 multiple dispersion representations, validity 1=10862
 multiple, in finite-dim. body, quantum theory 4=5070
 multiple, mean spatial and projected angles, theory 3=17311
 multiple, measuring apparatus, photoelec. transducer 2=20204
 multiple, one velo. theory, infinite scatt. media 3=19589
 multiple, of polarized particles 0=3930
 multiple, quantal multiple-scatt. eqns. 4=19742
 multiple scatt., effect on intrinsic particle field, emission on passing through 2 media 0=20093
 multiple scatt. of monoergic particles by amorphous foil, theory 0=9292
 multiple scatt. of particles of opposite charge 0=20165
 multiple, small-angle, using Molière screening 4=21838
 multiple, statistical problems 1=13195
 n-line graphs, kinematic branch points, new class 2=7817
 N-particle kernel, irreducible, Weinberg's conjecture 4=37073
 N/D calc. of Pomeranchuk and ρ -Regge trajectories 3=15019
 N/D method, with applications to π - π scattering 4=30187
 ND⁻¹ solutions for coupled scatt. amplitudes, symmetry 1=3137
 N-N pots. extended to hyperon-N scatt. 2=18190
 near reaction threshold, cross-section energy depend., resonances 0=11398
 neutral pseudoscalar theory, scatt. matrix 2=9797
 neutral scalar theory with recoil, s and p-wave solns. 4=846
 non-Born phase shifts, interrelationship 4=11090
 by non-central forces of given class 1=8434
 with noncentral forces, and two-body bound state 4=16974
 by nonlinear singularity, bounded, R-function construction 1=458
 nonlocal potential, variational scatt. 2=21829
 nonlocal theory, S-matrix construction 1=19130
 nonlocal theory, S-matrix construction 2=3275
 non-relativistic, causality and analyticity 3=24633
 nonrelativistic, variational method, differential form 3=5367
 non-shrinking diffr., slope of leading trajectory at $t=0$ 4=9135
 non-shrinking, elastic, high energy 3=14916
 nonspherical, at small angles, Schiff approx. 0=885
 normal thresholds in perturbation theory 1=10854
 Noyes and Wong eqn. for potential scattering 1=12607
 nuclear, elastic-inelastic phase relation 3=17447
 nuclear emulsions, meas. at long cell lengths 4=19341
 in nuclear emulsion, spurious 3=14543
 nuclear excitation, adiabatic approx. 0=9522
 nuclear excitation, collective, studies, review 3=22287
 nuclear potential, field theoretic definition 0=1252
 nuclear resonance, Regge represent. analysis 4=21807
 nuclear track emulsions, multiple scatt. 2=5554
 nuclear track emulsions, spurious scatt. 2=5553
 nuclei, average resonance parameters, R-matrix theory 3=8213
 on nuclei, black nonspherical, nuclear interaction 0=11392
 nuclei, closely coupled states rel. to optical potential 2=11286
 nuclei, complex, elastic, strong absorption model 4=6301
 by nuclei, coupled channel analysis 4=22128
 on nuclei, cross-section and polarization, optical model 0=5734

Scattering, particles—contd

- on nuclei, deviations from current models, review 1=8668
 on nuclei, direct interactions, effect of wave-function distortion of scattered particle 1=7363
 on nuclei, elastic and inelastic diffraction scatt., review 1=8679
 on nuclei, elastic, optical model 1=5884
 nuclei, elastic, optical model, potential independ. 4=25431
 nuclei, elastic scatt. rel. to elec. polarization 2=3538
 nuclei, elastic, strong absorption model 4=6300
 nuclei, elastic, strong absorpt. model, polarization of spin- $\frac{1}{2}$ particles 4=19741
 nuclei, elastic, threshold effect in optical model 3=6212
 nuclei, of fast particles, effect of boundary smearing 2=20578
 by nuclei, forward scatt. amplitude from optical-model potential, high energy limit 0=20428
 on nuclei (heavy), nucleon-nucleon correlation effects 1=5901
 on nuclei, inelastic, ang. distrib. and polarization 1=8674
 on nuclei, inelastic, collective effects 1=8676
 nuclei, inelastic, distorted-wave theory 4=25365
 on nuclei, inelastic, double-excitation, distorted-waves theory 3=661
 nuclei, inelastic, phases of partial matrix elements and parity rule 4=22085
 by nuclei, Monte Carlo study for geometrical barriers 3=12648
 on nuclei, near threshold for unstable particle production, cross-section 1=8672
 nuclei, optical giant reson., theory 2=3544
 on nuclei, optical-model analysis 0=20427
 on nuclei, optical model in the interior 3=2425
 nuclei, rel. to P_2 force in Elliott model 2=12110
 nuclei, phase shift analysis, review 3=12650
 nuclei, polarization 2=5876
 nuclei, quasi-elastic, distortion effects 3=8064
 nuclei, rel. to single-particle wave functions 2=20486
 nuclei, spin-orbit force 0=4015
 on nuclei, $Z \approx 50$, effect of shell closure 4=6191
 nucleon-deuteron, inelastic, impulse approximation 0=7344-5
 nucleon elastic scattering on target of spin 1 1=16769
 nucleon-nucleon, theory, rel. to nuclear forces 2=1757
 nucleon-nucleon, two-pion contribution 0=15293
 nucleons, by nonlocal potential, at high energy 0=9295
 by nucleus, black, inelastic diffrn. scatt. 3=2424
 on nucleus, with diffuse boundary, effect on ang. distrib. 4=25364
 nucleus, elastic, spin- $\frac{1}{2}$ particles, strong-absorpt. model 4=22083
 nucleus, generalized diffr. model at 660 MeV 4=1061
 by nucleus, inelastic, optical model rel. to direct interact. theory 3=2423
 nucleus, optical model, scattering amplitude 0=13109
 by odd-mass nuclei, collective effects 3=19747
 from odd-mass nuclei, oriented, deformed, elastic 3=19823
 off-forward scatt., dispersion relations 0=3935
 off-shell ampl. deriv. from on-shell ampl. 4=19442
 one-dimensional model, discontinuous Markov processes theory 4=25018
 one-particle production amplitudes, integral represent. 3=5942
 one-photon exchange processes, radiative corrections 3=7777
 one-variable dispersion relns., using JLD represent. 4=16823
 optical conditions within a weakly absorbing scattering medium 0=1044
 optical model potential, target exchange corrections 0=15566
 optical potential 4=21966
 optical potential ambiguities 3=22361
 optical theorem, with incoherent mixtures of pure states 0=20078
 optical theorem for particles with arbitrary spins 4=27814
 optical theorem, spin-depend. analogues 3=17208
 overlapping resonances, using $e^+ + e^- \rightarrow \pi^+ + \pi^- + \pi^0$ 3=17246
 p-p, p-n, electron excitation effects, calc. 0=1278

Scattering, particles—contd

- Pais approx. for phase shifts, rel. to Born approx. 2=13735
 parametric dispersion rels. 2=264
 "parity-unfavoured", forward and backward "selection rule" 3=24637
 partial amplitudes from nonlocal separable potentials 1=12059
 partial-wave amplitudes 0=2499
 partial-wave amplitudes 3=24636
 partial-wave amplitude, analytic continuation in complex plane of ang. momentum 2=22430
 partial-wave amplitudes, analytic props. 0=12859
 partial-wave amplitudes, analytical props. at any l 4=5967
 partial-wave amplitudes, analytical props., Fredholm's method 4=5968
 partial-wave amplitude, boundary conditions 4=18073
 partial-wave amplitude, for complex l 2=18077
 partial-wave amplitudes, complex singularities in perturbation theory 0=20068
 partial-wave ampl., continuation in total ang. momentum, for arbitrary spin 4=9120
 partial-wave amplitudes, high ang. momentum, props. 1=19135
 partial-wave amplitude, and scatt. amplitude, asymptotic behaviour 2=16175
 partial-wave amplitudes and scatt. amplitude, asymptotic behaviour 3=5957
 partial-wave ampl., singularities due to third double-spectral function 4=11937
 partial-wave amplitudes, spectral functions 1=16723
 partial-wave amplitudes, uniqueness theorem 4=847
 partial-wave analysis, relativistically invariant 4=3333
 partial-wave analysis, spinless particles 3=2208
 partial-wave and scatt. amplitudes 3=7801
 partial-wave scattering amplitudes, arbitrary ang. momentum 3=19587
 partial-wave scatt. amplitude in terms of unitarity condition and inverse amplitude 1=3220
 partial-wave scattering eqns. 1=5679
 partial waves, analyticity and crossing 2=257
 partial waves, in perturbation theory, analytical props. 2=21833
 particle—hole excitation effects 3=22360
 particle by identical bound particle, perturb. theory 3=9353
 particle posns. introd. into relativistic quantum mechanics 3=7797
 particle systems, "non-physical" steps in perturbation theory 0=15278
 peripheral collisions at 9-27 GeV and π - π interaction 2=16167
 peripheral, $\gtrsim 10$ GeV, effective target mass 2=9834
 perturbation series of S-matrix element 1=16722
 perturbation theory at high energy 3=17209
 perturbation theory, high-energy behaviour at fixed angle 4=25035
 perturbation theory, integral representations 2=5579
 perturbation theory, Mandelstam model, anomalous mass rel. 1=13339
 perturbation theory, use of quasiparticles 3=17194
 perturbation theory, scatt. amp. singularities, "open envelope" diag. 1=13345
 perturbation theory for strong repulsive potential 4=18074
 perturbation theory, time-ordered Green's functions 1=7203
 perturbing potential, determ. from scatt. phase shifts and bound states energy levels 4=27805
 phase approach generalization, for Dirac particles 4=24074
 phase meas. using intensity correl. 4=5999
 phase method generalized to nonlocal potentials 4=24075
 phase represent. of analytic functions 3=14895
 phase shift ambiguity, generalization, helicity 3=22075
 phase shift analysis, ambiguity for arb. spin 4=839
 phase-shift analysis with D-waves for track-chamber histograms 1=5698
 phase shift analysis, multiplicity removal 2=259, 22433
 phase shifts, approximation method to known case 4=8074
 phase shift behaviour when reaction channels present 2=20575
 phase shift bounds in single channel scatt. 4=21784

Scattering, particles—contd

- phase shifts, bounds, for static central potentials 0=17252
 phase shifts, calc. for centrally symmetrical case 0=20060
 phase shifts, calc., improved Born approx. 0=17251
 phase-shift calc. for long-tailed potentials 1=3135
 phase shifts, coupled errors 0=3943
 phase shift, derivation of new series 3=16537
 phase shifts, distorted wave approximation 0=20061
 phase shift energy derivative, rel. to macroscopic causality 2=3279
 phase shifts, extension of Born approx. 3=14906
 phase shift, g-derivative, props. 1=12065
 phase-shifts for long-range pots. 3=7793
 phase-shifts for low-energy scatt. 4=2573
 phase shift, momentum depend. bound 3=7807
 phase shift, momentum derivative, lower limit from macroscopic causality 1=10857
 phase shifts, negative energy moments 4=16042
 phase shifts rel. to no. of bound states 0=17264
 phase shifts due to repulsive potentials strongly singular at origin 4=27071
 phase shifts and scatt. matrix parametrization 4=3340
 phase shifts, variational principle 3=7800
 phase-space integrals, statist. mech. evaluation 4=9068
 physical regions and phase space volume, kinematical restrictions 4=21785
 π -nucleon, amplitude zeros rel. to dispersion reln. 3=564
 pion-nucleon by s-wave pion-pion interaction, classification 1=13325
 $\pi\pi$, Feynman diagram singularity determination by Landau's meth. 1=16714
 pion-pion, Shirkov dispersion eqns. 2=263
 in plasma, scatt. pot., calc. 0=2363
 polar surface, ideal 3=21898
 polarization and absorption phenomena 3=10060
 polarizations, in crossed reactions asymptotic relations 4=16948
 polarization, method of study 1=2026
 polarization of nucleons by, review 1=3175
 polarization relations, rel. to charge independence 2=5586
 polarized particles, multiple elastic scatt., diffusion theory 0=5524
 poles in production cross-sections 1=5672
 Pomeranchuk and Okun rules, math. implications 3=7784
 Pomeranchuk-Regge trajectories, two, conjecture 3=7805
 potential, amplitude analyticity 3=12413
 potential, asympt. expansion in inverse powers of wave number 4=8073
 potential, Born approx. for arb. spins 4=11928
 potential, complex ang. momenta 2=22423
 potential, deriv. from Agranovich-Marchenko eqns. 2=19437
 potential, dispersion-theory impulse approx. 3=5951
 potential fitting amplitude at given energy 1=13343
 potential, Mandelstam's programme 3=10039
 potential, many-channel, complex ang. momentum 3=558
 potential, many-channel, complex ang. momentum 3=7789
 potential, in momentum space, spectral represent. 4=14054
 potential, with n bound states 2=16159
 potential, non-relativistic, complex angular momentum, review 4=832
 potential, phase shift formulae 2=22425
 potential, reduction formalism 3=5939
 potential, Regge poles and branch cuts 3=12412
 potential representation, quantum field theory 2=9796
 potential scatt., asymptotic behaviour of S-matrix 3=14909
 potential scatt., for complex energy and ang. momentum 2=9798
 potential scattering, dispersion relation 0=2495
 potential scattering, double dispersion relations, analytic props. 1=16721
 potential scatt., Green's function 3=14903
 potential scatt., Jost functions 3=14902
 potential scatt., kinematical and dynamical resonances 1=7218
 potential scattering, Mandelstam representation 0=5500
 potential scatt., max. and min. principle 3=14904
 potential scatt., min. variational princ. method 2=9799
 potential scatt. at negative ang. momenta, Regge trajectories 3=24630
 potential scatt. in S-matrix theory of strong interactions 1=16702

Scattering, particles—contd

- potential scatt., Yukawa, dispersion relations 2=3284
 potential theory, analytic props. of scatt.
 amplitude 3=24631
 potential theory calc. by quasiparticle method 4=11935
 potentials with cores, Regge poles 4=11944
 potentials with inverse-square attraction 4=14053
 probability amplitude, quantized field, physical
 consequences 3=19588
 probability distrib., cross-section 3=4346
 production processes and moving Regge cuts 4=9148
 prolongation into complex ang. momentum
 plane 2=13749
 proton collimator, slit scatt. effects 2=1685
 proton-proton, spin correlation coeff. C_{nn} 0=7347
 proximity scatt., cross-sections for unstable
 particles 2=3537
 pseudoscalar coupling in Chew-Low formalism, s-wave
 scattering 0=20199
 quadrupole potentials, long-range, low-energy
 expansion 4=19981
 quantum calc., semiclassical treatment 3=1618
 quantum field theory, rel. to truncated vac.
 expect. values 3=14846
 quantum-mechanical problem, dependent and independent
 of time 2=13264
 quantum number exchange rel. to optical theorem 4=21789
 quantum potential approach 1=13360
 quasiclassical, in central-symm. field,
 amplitude 4=5969
 quasi-elastic scatt. of fast particles by nuclei 0=4085
 quasi-optical approach in quantum field theory 3=24577
 quasi-potential character of scatt. amplitude 4=3336
 quasipotential method, second Born term, analytical
 props. 4=5971
 quasi-stationary states, with complex energies 0=11110
 r^{-2} potential, bound states, scatt. 2=17364
 radial wave funcns., analytic properties 0=17254
 radially inhomog. spherical medium, dyadic Green's
 function 3=24467
 radiative corrections, unified treatment 3=12423
 radiative transitions, theory, resonance and multiple
 scattering 0=15515
 rate consts. for collisions in disperse systems, size
 distrib. effects 4=73
 reaction amplitudes, n-particle, kinematic branch
 points 2=11896
 rearrangement collisions, Born approximation 1=10858
 rearrangement collisions, coupled eqns. 4=27799
 rearrangement collisions, formal theory 1=9327
 rearrangement collisions, using optical
 potential 2=11287
 rearrangement, collisions, theory 2=22779
 reflection of charged particles by r.f. field 1=16419
 Regge amplitude, singularity 3=17203
 Regge analysis, rel. to partial wave expansions and
 crossing symmetry 4=850
 Regge behaviour, renormalization group methods 4=5990
 Regge cut, experimental test 3=24655
 Regge cuts and three-particle states in nonrelativistic
 model 3=23770
 Regge formula extension to whole l-plane 2=20259
 Regge formula, removal of background integral 3=7796
 Regge hypoth., in multiple meson prod. 3=19661
 Regge method for nonrelativistic 3-body problem, total
 arg. - momentum plane 3=24662
 Regge parameters, dispersion relns. 3=12426
 Regge parameters, dynamical eqns. 4=852
 Regge plane, cuts, cancelling 3=12428
 Regge poles, due to analyticity and unitarity 3=10042
 Regge poles, asymptotic value of amplitudes 4=861
 Regge poles, behaviour in a potential at high
 energy 3=2214
 Regge poles calc. by continued fractions 3=2204
 Regge poles contribution to high-energy total cross-
 sections 4=5991
 Regge poles as conventional field theory elem.
 particles 4=9146-7
 Regge poles and diagram technique 3=24661
 Regge poles, eval. from perturb. theory 3=4347
 Regge, poles, factorization of coupling 2=13263
 Regge poles, factorization of residues 2=20263

Scattering, particles—contd

- Regge poles, fermion, use 4=6113
 Regge poles, rel. to form factor data 3=566
 Regge poles generaliz., expt. consequences 2=16165
 Regge poles for hard-core potential scatt. 3=10043
 Regge poles and high-energy elastic scatt. 3=5945
 Regge poles and high-energy limits 2=20261
 Regge poles in high-energy potential scatt. 4=841
 Regge poles in high-energy scatt., impulse approx. 3=5948
 Regge pole hypoth., rel. to high-energy π photo-
 prod. 3=19672
 Regge pole hypothesis, polarizations 3=12493
 Regge poles, inelastic cross-sections, asymptotic
 behaviour 4=3343
 Regge poles and Landau singularities 2=22446
 Regge poles and Landau singularities 3=14923
 Regge poles in the light of Levinson's theorem 3=24663
 Regge-pole-like high-energy behaviour of perturb.
 theory 4=3357
 Regge poles localization in potential scatt. 4=25047
 Regge poles and multiple production 4=834
 Regge poles, nonrelativistic problem, local and singular
 interaction 4=3349
 Regge poles in nonrelativistic quantum theory 4=8076
 Regge poles, nonrelativistic trajectories 4=5992
 Regge pole parameters, dynamical determination 3=19569
 Regge pole parameters, dynamical eqns. set 4=3355
 Regge poles and particle prodn. by γ -rays 3=22088
 Regge poles and perturbation theory 3=14891
 Regge poles, rel. to perturbation theory 4=9145
 Regge poles, physical interpretation 4=2561
 Regge poles, position, influence of spin 3=5955
 Regge poles, positions and residues, analyticity 2=20260
 Regge poles in presence of hard core 4=19449
 Regge poles, propagator ghost elimination 3=17201
 Regge poles, quasiclassical potential well 4=860
 Regge poles for reactions of 2 spin- $\frac{1}{2}$ fermions and 2
 spin-0 bosons 4=25004
 Regge poles, rel. to real/imag. parts ratio 3=17213
 Regge poles in relativistic wave eqns. 3=12424
 Regge pole represent. below elastic threshold 4=5988
 Regge poles, resonance nuclear reactions 4=17109, 30334
 Regge poles, for S-potential 4=3341
 Regge poles, solvable cases from Mandelstam
 represent. 2=22445
 Regge-pole theory, exact form for scatt.
 amplitude 4=3331
 Regge pole trajectories, analytic props. 3=24653
 Regge pole, trajectory, removal of "ghost" 3=5954
 Regge pole trajectories, restrictions on 4=3354
 Regge-pole trajectories for Yukawa potl. 3=19570
 Regge-Pomeranchuk trajectory and 80 m_{π} reson-
 ance 3=19572
 Regge represent. for potential scatt., new 4=21805
 Regge representation and e.m. form factors 2=20323
 Regge representation, extension 3=10049
 Regge surfaces and singularities, relativistic theory 3=10044
 Regge trajectories, in Bethe-Salpeter eqns. 4=16836
 Regge trajectories, bootstrapping method 4=11949
 Regge trajectories for class of weak short-range
 potls. 4=3332
 Regge trajectories and diffraction shrinkage 4=853
 Regge trajectories, dominant, signatures 4=25048
 Regge trajectories and elementary poles 3=10048
 Regge trajectories for repulsive Yukawa potential,
 analytic props. 4=16043
 Regge trajectory, lower bound 3=10045
 Regge trajectory and resonant partial-wave ampli-
 tude 3=10046
 Regge trajectory, restrictions by maximal
 analyticity 3=21250
 Regge trajectories singularities rel. to Landau curves
 asymptotes 4=3353
 Regge trajectories, square-wall potl. 3=14907
 Regge trajectories, WKB and variational calc. 4=25046
 Regge trajectories, weak-coupling limit 3=22089
 Regge vacuum poles, trajectory 4=3342
 Reggized photon theory 3=19574
 regularity props. in scatt. amplitude 2=3276
 relativistic amplitudes, invariant expansions 4=19435
 relativistic, book 4=8038
 relativistic, complex angular momentum 4=27801

scattering, particles—contd

- relativistic Coulomb scatt. wave-function 0=15286

- scattering and production amplitudes 0=17260

Scattering, particles—contd

- scattering wave-function, distorted-wave calc. 1=19143
 Schrödinger and Dirac particles, by high-energy potential 2=13737
 Schrödinger eqn., in inhomog. medium 2=33
 Schrödinger eqn., limiting absorption and amplitude principles 2=32
 Schrödinger eqns., existence of solns. 4=27070
 Schrödinger particles, high-energy potential, approx. method 4=11088
 Schrödinger scatt. amplitude, analyticity 2=19439
 Schrödinger scattering amplitude 1=15696-7
 Schrödinger theory, Born approximation for transition matrices 1=12058
 screened Coulomb potential, Born approx. 2=1069
 semi-classical, by complex nuclear potential 2=11890
 separable nonlocal potls. and Regge poles 4=3330
 several groups of many equiv. particles, interaction energy 3=17207
 shrinkage of diffr. pattern and Regge pole effects 3=19582
 single-channel ampl., systematic approx. 4=11954
 single-channel, improved minimum princ. 3=9352
 single-channel phase shifts, static approx. and bounds 3=53
 single integrals of Mandelstam representation rel. to double spectral functions 4=25021
 single and multiple, angular distrib. 1=13330
 by singular potential in perturb. theory and in momentum repres. 0=12856
 singular potential theory, cutoff procedure 4=21782
 singular potentials with short range, Jost funct. method 4=21778
 singular potentials superposition, and peratization 4=25007
 singular potentials, weak-coupling limit 4=19431
 singular wave-function operator, applic. 2=11811
 singular wave-function operator, applications 1=10851
 singularities in ang. momentum plane 3=10054
 singularities in ang. momentum plane, pole-cut model 4=842
 singularities of 4-pt. function with variable masses 3=19590
 singularities of scatt. ampl., charged scalar fixed-pt.-source theory 3=14912
 singularities of scatt. amplitudes at isolated real points 2=13738
 singularities of scatt. amplitudes on unphysical sheets 1=450
 singularities on unphysical Riemann sheets 4=9119
 singularities in unphysical sheets 3=17210
 small-angle critical scatt. from cooperative assemblies 3=52
 small-angle multiple, fast charged, statistical theory 3=19585
 small-angle, systematic errors 0=15311
 small scattering chamber for large angular region 1=19072
 space-time description 1=10860
 spacially extended particle theory 3=7767
 spectral function analyticity, rel. to channel-spin 2=11883
 spherical dielec. particles of refr. index 1.25 3=16804
 spin, complex J partial wave ampl., energy analyticity 4=11927
 spin correlation coeff. C_{sp} , relativistic formula 1=2050
 spin effects, triangle inequalities eval. 2=22429
 spin 0 particles, elastic scatt., theory 1=17065
 spin $\frac{1}{2}$ particles, optical model 4=6366
 spin- $\frac{1}{2}$ particles, nonrelativistic, with spin-orbit interaction 1=19133
 spin $\frac{1}{2}$ particles, polarization effects, relativistically covariant relations 1=19147
 spin-1, covariant polariz. analysis 2=18085
 spin- $\frac{3}{2}$ particles, by Coulomb field 0=2508
 spin-2, scattering by Coulomb field 0=2509
 spin-orbit potential with π -meson scatt. correction 0=15296
 spin polarization meas., study of techniques 0=1408
 spin-zero meson exchange criterion, Treiman-Yang test 4=24999
 spinless, charged, partial wave analysis 3=12411
 spin $\frac{1}{2}$ —spin $\frac{1}{2}$, Lorentz-invariant S-matrix ampl. 4=16832
 spinless, Lorentz-invariant, quantum mechanics 4=8077
 spinless particles, rel. to quantum-mech. equations 1=5648-52

Scattering, particles—contd

- with spins, Regge poles contribution 4=16837
 spinors in Coulomb field, relativistic, theory 2=22436
 spinors in Coulomb field, relativistic, theory 1=19129
 spurious, in nuclear emulsions 4=27732
 stable and unstable particles, dispersion relations 3=24632
 static-source theory, recoil model, quantization 2=9801
 statistical model, large-angle elastic scatt. 3=7794
 stopping power of electron gas for charged particles, rel. to dielectric constant 4=27572
 strip approx., consistency, Regge-pole conditions 4=21804
 strong interaction resons., rel. to Regge poles 2=13740
 strong interactions at low momentum transfers 1=12054
 sum rules, appl. to electron-deuteron scatt. 0=2530
 symmetric coupling matrix, use 2=4912
 T-matrix, Coulomb, anomalous behaviour 4=11089
 t-matrix for potentials with hard core, calc. 1=8057
 by target possessing discrete excited states, complex eigenvalues 0=9293
 tertiary and general-order collisions 1=3134
 theory, using eigen-phase shifts and eigen channels 0=11111
 theory, using quantum-mech. many-body problem 2=5877
 theory, without channel radii 0=17567
 thick absorber, single-scatt. process deriv. 3=10138
 three-body, ang. momentum separation, Fadeev eqns. 4=21787
 three-body, approximation techniques 4=25027
 three-body, non-relativistic, discontinuities across cuts 3=12427
 three body problem, ang. momentum continuation without cuts 4=15028
 three-body problem with separable potentials, Regge cuts 4=19454
 three-body problem for short-range forces 3=14919
 three-body problem, Sturmian function appl. 2=20267
 three-body scatt. analysis 2=3271
 three-body system, with short-range forces, scatt. amp. 1=16713
 three-dimensional Lorentz group, complex ang. momentum 4=25025
 three equivalent particles, interaction energy 3=17206
 3-j symbols, symmetry relations 3=7798
 three-particle, planar, formal theory 3=13999
 three-particle, potential, complex ang. momentum 4=16045
 three-particle prod. near threshold when two interact. resonantly 4=19441
 three-particle states in complex ang. momentum theory 4=5977
 three-particle system, Hamiltonian eigenfunctions 1=19144
 three-particle system, resolvent of Schrödinger operator 3=21244
 three-particle unitarity 3=19564
 three-particle unitarity integral, prod. amplitude 4=25026
 3/2 and 0 elastic 3=19586
 threshold behaviour, close-coupling effects 3=22502
 threshold behaviour, rel. to N/D method 4=25019
 threshold effects in average cross-sections, R-matrix theory 3=10320
 threshold effects in three-body channels 0=15287
 thresholds, ordinary and anomalous, in perturbation theory 0=17266
 time dependence effects 4=19743
 time duration definition, causality—analyticity connection 4=27816
 time-of-flight obs., multiple scatt. correction by Monte Carlo anal. 4=6083
 total cross-sections, high energy, rel. to "universality" 2=22448
 transformation group for metrics with invariant ang. distrib. 4=30184
 transport in scatt. medium, quantum theory, incoherent processes 0=9298
 transverse moments distrib. and high energy scatt. 3=22082
 two-body central, asymptotic phase shifts and bound states 4=9129
 two-body Muskhelishvili-Omnès form factor 2=20269
 two-body problem, covariant 0=3923
 two-body problem, elastic and inelastic scattering 1=4768
 two-body problem, integral formalism, using Liouville eqn. 0=15288

Scattering, particles—contd

- two-body problem, number of partial waves 0=20062
 two-body reaction amplitude, Mandelstam representation 1=10861
 two-body unitarity relation, simplification 1=19137
 two-channel, non-relativistic dispersion relations 2=11878
 two channel, pole residue relations 3=17216
 two-channel process, dispersion relns. 3=4344
 two-channel reactions, simple model 3=14886
 two-channel, with unstable particles, N/D formalism 4=27813
 two-dimensions, scatt. amplitude 3=19563
 two interacting particles, six-dim. wave eqn. 4=11082
 2-particle, elastic, in 3-particle break-up 4=9097
 2-particle resonance systems, masses of 4=3311
 two-particle resonances, dispersion relns. 3=12483
 two spin-half particles, dispersion relations 4=30186
 ultraviolet divergences in Feynman diagrams, removal 3=12401
 uncoupled phase method for hard-core interactions 4=11930
 unitarity bound of ampl. and diffr. peak 4=27807
 unitarity conditions in terms of propagation kernels 1=12808
 unitarity condition applied to Regge scatt. amplitude 3=22085
 unitarity as direct eval. of discontinuity 2=22427
 unitarity and evaluation of discontinuities 3=24629
 unitarity impulse approx. 3=19565
 unitarity and Mandelstam representation 1=13336
 unitarity and production amplitudes 2=16168-9
 unitarity property of scattering operator 0=4945
 unitarity of S-matrix and analyticity 1=5683
 unitary scatt. amplitudes, construction 1=7216
 unphysical sheet amplitudes, and resonance poles 4=21788
 unstable, analyticity props. of Feynman diagr. 4=5935
 unstable particle quantum theory 4=24077
 unstable particle, with two stable ones 3=5923
 unstable particles, analyticity of particle wave amplitudes 2=1663
 unstable particles, diff. scatt. cross-sections, extrapolation method 1=456
 unstable particles, masses and lifetimes 4=16805
 unstable particles, scatt. amplitude 3=550
 unstable particles, scatt. amplitude determination 0=9296
 unstable particles and 3-body systems 4=25028
 upper bound, high energies, improvement 3=17221
 upper bounds at high energy 4=27810
 use of "damping" functions 0=9319
 vacuum pole trajectories, intersection 4=16835
 variational calc., phase-shift accuracy 2=1660
 variation principles for matrix elements 3=22093
 variational method, integral form 3=7122
 variational wave functions, hypervirial theorems 3=7128
 vertex functions, unitarity reln. 4=25042
 very-high energy collisions, ang. distrib. of secondaries in jets 4=5943
 very high energy, rel. to low-energy radn. 2=20229
 virtual particles not corresp. to usual type poles 2=13744
 wave amplitudes, partial, singularities for 2 ingoing and 2 outgoing particles 2=22420
 wave-packet formalism for finite time interval 0=15272
 wave-packet interpretation 0=12874
 wave-packet theory formulation 0=45
 Wigner's inequalities for spin 0 and $\frac{1}{2}$ particles 0=5501
 Yang-Mills field, Dirac quanta 4=11878
 Yukawa coupling const. calc. 3=10051
 Yukawa potential, use of improved Born series 4=2556
 Yukawa potential, Regge poles and asympt. behaviour of amplitudes in perturb. theory 3=21249
 Yukawa potentials, complex 3=4339
 Yukawa potentials, generalized 4=2551
 Yukawa, Regge pole trajectories for weak coupling 3=22092
 zero-energy parameters, rel. to various potentials 4=25017
 zero-energy scatt. problem 2=7832
 8.5 BeV, elastic, analysis 4=3350
 Ar molec. beam on LiF cleavage plane 3=2680
 Au¹⁹⁷-O¹⁶, optical model analysis 4=22196
 C¹² + C¹², elastic scattering at 6-35 MeV 1=11039
 C¹², by C¹², at 127 MeV, elastic and inelastic 2=16438
 C¹²-C¹², 127 MeV, elastic and inelastic 4=22198

Scattering, particles—contd

- C¹²-Li⁷, elastic 4=22197
 H and H₂ beams, by H and He gases 2=23017
 H⁺ ions, in CH₄, CF₄, C₂H₆, C₂F₆ 2=12354
 He beams, thermal, by H and He gases 2=23017
 He molec. beam on LiF cleavage plane 3=2680
 He II, liq., Van Hove correl. functions 3=11703
 He³- α , resonating-group struct. in one-channel approx. 3=24811
 He³, on medium-weight nuclei 0=9641
 He³, 29 MeV, by Au, polarization 3=24976
 He³, 29 MeV, by H, D, He³ and He⁴ 0=20250
 He³ by C¹², Ne²⁰ and A⁴⁰, at 28.5 MeV 0=20463
 He³-He³, elastic, 3-12 MeV meas. 3=12521
 Li atomic beams, by crossed Hg beam, de Broglie interference effects 1=820
 Li⁷-Li⁷, elastic 4=22197
 N¹⁴ + Be⁹, elastic, low-energy, optical model 4=22201-2
 N¹⁴-C¹², elastic, 8 to 20 MeV centre-of-mass energy 4=22199
 N¹⁴-N¹⁴, elastic, 8 to 20 MeV centre-of-mass energy 4=22199
 N¹⁴ + O¹², elastic, low-energy, optical model 4=22201-2
 O¹⁶ + C¹², elastic, low-energy, optical model 4=22201-2
 O¹⁶-C¹², elastic, 8 to 20 MeV centre-of-mass energy 4=22199
 O¹⁶-C¹², 168 MeV 4=22200
 O¹⁶ + O¹⁶, elastic scattering at 6-35 MeV 1=11039
 Pb²⁰⁸-C¹², inelastic 4=22204
 Pb²⁰⁸-O¹⁶, inelastic 4=22204
 Ta¹⁸¹-O¹⁶, 166 MeV, inelastic 4=22203

Schlieren systems

- colour schlieren analysis, use of colour film 1=6960
 colour schlieren photography in wind tunnels 3=271
 combined with high-speed cameras 2=19738
 demonstration apparatus 1=12998
 flow past cylinders, high velocities 2=15534
 glass, quantitative meas. 1=4447
 instrumented shock tube 2=7244
 layer, uniform and plane, spectral and ang. distrib. rel. to noise 3=3883
 light distrib. in image plane, rel. to refr. index distrib. 4=18383
 liquid free surface study 3=16744
 for obs. of gas flow at low pressure 4=8229
 photography of orthogonal pinch discharge 3=7585
 plasma density meas. in rail accelerator 4=14734
 plasma diagnostics, technique, using ruby laser light source 4=18900
 plasma, r.f., photography 3=4146
 quartz, fused, for delayed u.s. pulse detection 2=2718
 refractive index gradient meas. in solutions 4=8380
 sequential-spark with cylindrical-lens camera, laminar to turbulent flow transition 0=16727
 sharp-focusing, for flat flames study 2=7352
 shock-tube instrumentation 2=19602
 shock tube study, large-amplitude waves 1=8153
 time resolved study of discharge, 0.4-4 mm Hg 3=9739
 ultrasonic beams between plane-parallel plates 1=6939

Scintillation counters

- photosensitive junction device, new type 4=1694
 photovoltaic solar energy converters, efficiency 3=15637
 phthalocyanines, rectification props. 3=17916
 piezo-junctions in Ge, Si 3=2940
 plasma, micro, at crystal dislocations, stair-rod, p-n junctions 3=20351
 point-contact diode for elec. characterization of films, design, calibration and operation 4=28569
 point-contact diode, for harmonic generation of mm waves 4=17501
 point contact effective area 0=2883
 point-contact rectification, dipole mode of minority diffusion 0=1633
 point contact rectifiers, effect of surface currents 1=11319
 position of juncns., det. device 2=6474
 pressure effects on p-n resistivity 1=7630
 radiation detector leakage, noise resolution 2=6479
 as radiation detectors 0=17156
 radiation detectors, amplifiers for, transistor and valve types 1=2938
 radiation detectors, diffused p-n junction, var. of window effect with bias, calc. 4=5891
 rectifier, statistical model, construction 4=28594
 rectifiers and transistors, metal-semicond., injection model 4=1638
 rectifying contact, piezoelectric effect 1=1092
 rutile diode, reduced, Schottky barrier layer model, expt. analysis 4=22746
 Schottky diodes, photoelec. det. of image force dielec. const. 4=26081
 scintillator-junction-diode combination, α and p counting 4=9010
 semiconducting junctions, p-n, n effects, max. allowable 3=22959
 semiconductor-metal contact, 2-carrier model theory 2=23422
 silicon carbide p-n junction, electron emission 1=7658
 solar-energy converters, theory 2=14519
 square law dielectric diode, noise power meas. 4=12839
 step junctions, symmetrical, space-charge-layer width and capacitance 3=881
 stepping diode, description of three types 3=10857
 surface-barrier diodes, as fast neutron detectors 1=3193
 surface-barrier diode, nuclear particle det. 2=5530
 surface-barrier diodes, as particle counters, 0.2-300°K, mechanism 1=3089
 surface barrier, particle detectors, protection, against Hg vapour in vac. pumps 3=22043
 for temperature meas., by leakage current 4=18463
 thermojunctions, review 0=10002
 thyristor, for thermoregulator 4=18469
 transient behaviour in pulse operation 4=1631
 transient processes, low injection levels, nonequilib. carrier storage and decay 4=26076
 triode, dielec., space-charge-limited 2=21181
 tunnel, $A^{11}B^V$ materials, conductivity minimum theory 3=20129
 tunnel, alloyed contacts of Au, to Si and Ge, low resistance 3=20360
 tunnel cathode, equiv. noise temp. 2=12532
 tunnel cathode, low-noise beams 2=8376
 tunnel diode, amplification conditions 2=23425
 tunnel diode band structure 1=11273
 tunnel diode, capacitance vs. voltage meas. 4=30639
 tunnel diodes, char. curve meas. 3=17917
 tunnel diode characteristic, temp. dependence 1=11316
 tunnel diode circuit for liq. scintillation counting 2=2978
 tunnel diode, circuits, fluctuations 2=15871
 tunnel diode, circuits for NaI:Tl detectors 2=5275
 tunnel diodes, construction method 3=13094
 tunnel diode, current-voltage characts. deriv. 2=10509
 tunnel diode decade counter 3=5611
 tunnel diodes, effect of degeneracy 3=17679
 tunnel diode development, review 3=8538
 tunnel diode discrimination, d.c., hysteresis 4=21439
 tunnel diode, discriminator, pulse-shaper 2=5276
 tunnel diode, electromech. transducer elements 2=17546

Semiconducting devices—contd

diodes and junctions—contd

- tunnel diodes, by epitaxial growth of Ge on Ge or GaS 0=18025
 tunnel diode, fast memory 4=12941
 tunnel diode, in fast pulse-shaping cct. 2=5283
 tunnel diode, in fast trigger cct. 2=2977
 tunnel diodes, field decay of local states 3=15453
 tunnel diode, in four stable state cct. 2=2976
 tunnel diode, hydrostatic press. transducer 2=6484
 tunnel diodes, I, G, and I/G values, electronic det. 1=13051
 tunnel diode, i.r. luminescence 2=10631
 tunnel diodes, impurity band conduction, excess current 1=11314
 tunnel diodes, junction potential studies 3=20357

 carrier recombination, rel. to recomb. centre conc. 2=632
 carrier recombination, surface, continuous level spectrum 2=18662, 23290
 carrier recombination theory, by multiple levels 2=23284
 carrier recombination, universal surface velocity 1=3740
 carrier-saturated current flow, thermodynamic deviations 4=12873
 carrier scattering, Hall current detm. 3=17845
 carrier scattering, inelastic, lifetime and mechanism 1=1031
 carrier, sign, concn. and mobility, meas. method 3=15559
 carrier steady-state distribution function 0=17905
 carrier transport including space charge, theory 1=11280
 carrier transport and photoconductivity with trapping, theory 0=13586
 carriers, diffusion coeff. meas. 2=21115
 carriers, nonequilibrium retardation times 0=20885
 carriers, surface mobilities, calc. 2=2134-5
 carriers of very low mobility, theory 2=23299
 cascade capture of electrons 0=15917
 as catalysts 2=8918
 cathodes, pulse current, cond. mechanism 4=28545
 cathodoluminescence, trapping mechanism 3=3064
 cavity packing with hard Ga alloys, elec. props. 0=14360
 charge carrier behaviour, in high elec. fields 0=13588
 charge carrier effective mass, review 4=6779
 charge carrier inertia effects meas. 4=28541
 charge carriers scatt. from point imperfections 2=21114
 charges, effective, diff. bet. physical and chemical definitions 4=20346
 chemical formation by oxidation and reduction, effect of equilibrium conditions 3=25824
 chemical and physical structure imperfections, rel. to chemical reactivity 1=3736
 chemisorption isotherms on model surface 2=4543
 chemisorption rate laws 3=1390
 chemisorption, "real" surface, electronic theory 0=1634
 combination resonance at local centres of large radius 4=30549
 combined electron resonance 3=15931
 combined resonance in crossed mag. and elec. fields 2=18657
 combined resonance in strong magnetic fields, theory 1=19842

Semiconductors—contd

combined resonance in strong magnetic fields, theory 2=4003
 with complex band structure, deformation potential theory 1=6142
 complex bands, deformation pot. theory 2=23271
 composition effects 3=25340
 conduction centres, four-point resistivity probe 0=2856
 conduction, dielectric const., i.r. absorpt., diffusion, study by microwave techniques 4=15531
 conduction electrons, chem. potl., degeneracy, in mag. field 1=12427
 conduction electrons, 2-phonon scatt., Weisskopf-Wigner theory 0=528
 conduction, hot carrier, freq. depend. 3=13048
 conduction mechanism in low-mobility semiconductor 2=4004, 6433
 conduction mechanism, thermally stimulated 0=11674
 conduction, metallic impurity, localized-spin theory and negative magnetoresistance 2=16690
 conductivity anisotropy measurement, effect of specimen side-arms 4=28551
 conductivity, average, of diffused layers in semiconductors 4=12869
 conductivity calc., including impurity and phonon scatt. 1=12408
 conductivity, dielectric const., slab in waveguide microwave meas. analysis 4=12880
 conductivity, effect of electric field 1=14419-21
 conductivity, effective mass from i.r. reflectivity 4=17390
 conductivity, elec., meas., loss, by coaxial cell 4=6934
 conductivity, electrical, calc., allowing for impurity ions 3=20288
 conductivity, electrical, impurities, low temperature 3=22910
 conductivity, electrical, impurity, low temp., calc. 3=20292
 conductivity, electrical meas. 4=4137
 conductivity electrons, energy spectrum, in mag. field 4=17398
 conductivity, incremental, due to space-charge layer 4=20347
 conductivity, at low temp. 1=7511
 conductivity, majority carrier magnetosurface effect 1=14405
 conductivity meas., epitaxial and bulk, four-point probe 3=25341
 conductivity, measurement, five probe method, theory 3=21674
 conductivity, nonequilib., decay, two recomb. centres, calc. 3=17833
 conductivity, temp. var., and ratio of carrier masses for given doping 4=4128
 conductivity variation, cross-sectional, meas. 3=17844
 conductivity of warm electrons, cubic crystals, tensor theory 4=12871
 conference, Berlin 1=2382
 conference, Exeter, July 1962 2=23260
 conference, Exeter (1962) 3=6566
 conference, Exeter (1962) 3=6567
 Conference (Garmisch, 1956) 0=4324
 conference, L'vov (1959) 1=3733
 conference (Prague, Aug. 1960) 1=6131
 conference, Prague 1960 2=21113
 conference, Prague 1960, closing speech 3=2861
 conference, Prague 1960, closing speech 3=2862
 conference, Prague 1960, summary talk 3=2860
 conference, Varenna (1961) 4=20339
 contacts with metals, nature of current flow 0=582
 Corbino expt. using cylindrical mag. field, galvanomagnetic and thermomagnetic effects 3=1925
 correlation energy of electrons, theory 0=2867
 covalent bonds 3=10566
 covalent, "cascade" recomb. of carriers 2=18656
 covalent, impurity centres, ionization energy, temp. depend. 0=15864
 crucible material, use of vitreous C 3=21181
 crystal defects and energy states 2=14515
 crystal excitons, drag by charge carriers, calc. 3=17691
 crystal growth, Czochralski, distrib. of additions 3=25670
 crystal growth, Czochralski, impurities, two-crucible control 3=25671
 crystal imperfections 1=3652
 crystal potential and energy bands, calc. 0=4354

Semiconductors—contd

- crystal potential and energy bands, exchange and correlation effects 3=6578
 crystal potl. and energy bands, self-consistent calc. 0=1629
 crystals electron band struct., review 4=28406
 crystals, exciton absorption rel. to fine structure of luminescence and photocond. 2=8400
 crystals, and grain boundaries 4=30570
 crystals, magnetoelectric and thermomagnetolectric effect, calc. 3=6565
 cubic lattice, simple, band struct. rel. to pot. and lattice struct. 2=23104
 current carrier energy spectrum calc. 2=633, 23302
 current carrier energy spectrum calc., rel. to spin-orbit coupling 2=4010
 current carrier energy spectrum calc., rel. to spin-orbit coupling 3=2877
 current carrier scattering on impurity centres 0=6088
 current density rel. to electric field strength, homopolar semiconductors 4=26018
 current fluctuations, near non-equilibrium stationary state 3=15558
 current instability, self-excitation 3=20284
 current instability, theory 4=10036
 current oscillations, appearance 3=17830
 current-voltage relations in forward-biased p-i-n structures 1=1037
 current waves interaction with polarization 4=1572
 currents, space charge limited, with blocking contacts 3=8501
 cyclotron and combinational resonance 2=16688
 cyclotron and paramag. resonance on strained crystals, rel. to band structure 1=6097
 cyclotron resonance 0=537, 6093
 cyclotron resonance, Azbel'-Kaner and Voigt-type, theory 3=785
 cyclotron resonance, in crossed elec. and mag. fields 0=11596
 cyclotron resonance in extreme anomalous relaxation region 4=12717
 cyclotron resonance, use for microwave generation amplifcn. 0=2437
 cyclotron reson. of non-equilib. carrier distribns. 2=23130
 cyclotron resonance, quantum effects 2=23137
 cyclotron resonance, quantum transport eqn., eqn. treatment 3=15560
 cyclotron resonance in varying magnetic field 2=3882
 cyclotron resonance in varying magnetic field 3=2776
 daltonides, anomalously composed, theory 3=10762
 decay of excess carriers, theory 1=2406
 deformation potential theory, for complex energy-band structure 1=1030
 degenerate bands, thermomagnetic effects, theory 3=17832
 degenerate, disordered, theory, 1930 → present 3=13045
 degenerate, energy levels and optical props. 3=20454
 degenerate, h. f. resist., due to electron-phonon (optical) interact. 4=10038
 degenerate, Hall mobility of carriers, rel. to impurity content, theory 1=11287
 degenerate, theory 3=10739
 degenerate, thermo-e.m.f. and Nernst effect, rel. to mutual electron and phonon drag 3=20290
 depletion-layer photoeffects 0=1682
 diamagnetic resonance 2=20981
 diamagnetic susceptibility, theory, temp. depend. 0=18157
 diamond-structure, dielec. const. rel. to energy gap 4=12867
 diamond-type crystals, hole band, many electron theory 0=2858
 diamond-type, energy spectrum of holes 0=11597
 diamond-type, free dangling orbitals on clean (111) surfaces 3=10748
 diamond-type, strain depend. of acceptor binding energy 1=17665
 diamond-type structure, surface states, theory 2=23306
 dielec. const. by intrinsic activation energy 3=847
 dielectric constns. meas., waveguide 4=17482-3
 dielectric function, wave-number-dependent, calc. 3=6577
 diffusion attenuation of space charges 0=542-3
 diffusion const. and length of excess charge carriers, meas. 0=2857

Semiconductors—contd

- diffusion and drift of minority carriers, theory 2=6438
 diffusion with interstitial—substitutional equil. 3=20225
 diffusion of ionized impurities, model 1=17566
 diffusion limited field instabilities 0=4325
 diffusion in, review 1=3739
 diffusion, thermal, meas. 1=17568
 diffusivity, thermal, method for meas. 2=8239
 dipole scattering 3=10734
 dislocation acceptors, occupation statistics 0=18005
 dislocation det. on cleavage surfaces by etching 3=4877
 dislocation mobility and kink nucleation theory 3=17730
 dislocations, elec. props., theory and exptl. 3=25335
 dislocations, generation and elec. effects 1=6136
 with dispersed colloidal phase, optical absorption by free carriers 0=7995
 dispersion theory, interband and plasma effects 3=10744
 displacement threshold meas., review 4=30594
 donor-acceptor pair energy levels 0=11602
 donor diffusion in degenerate layers 1=14422
 double-injection in deep-lying impurity types 4=12875
 donor ionization energy, resonance transfer 1=14410
 donor states, deformation round impurity atoms, theory 1=19845
 double diffusion of impurities 1=11219
 double refraction of e.m. waves in transverse mag. field, theory and exptl. verification 1=3819
 drift mobility, lifetime of carriers, simultaneous meas. 2=12504
 drift mobility meas. theory, diffusion and recomb. controls 0=541
 dye-semiconductor interface, photo-effect sensitization, effective mass determination, Fermi liquid theory 0=575
 e.m. wave absorption by electron-phonon system 4=1713
 e.m. wave propag., plasma, appl. 3=6568
 e.m. wave propag., in presence of const. induction 4=11794
 earths mantle as semiconductor 1=21084
 effective mass measurements, review 3=10743
 effective mass for non-quadratic dispersion formula 1=11274
 elastic constants and lattice vibrations, diamond-type materials 3=1214
 elastocaloric effect in many-valley type 3=4832
 elec. breakdown, theory 0=15910
 elec. cond., Boltzmann transport eqn., electron-lattice vibration interaction, piezoresistance 4=15527
 elec. cond. meas., limitations in potentiometric method 1=17644
 elec. conductivity, complex value calc. 1=16306
 elec. conductivity at microwave frequencies 0=2852
 elec. conductivity, statistical theory 0=571
 elec. conductivity and thermionic emission 0=15901
 elec. conductivity, variational calc. 1=17660
 elec. current fluctuations, theory 3=6572
 electric current fluctuations, theory 2=23295
 elec. and galvanomagnetic meas., effect of random inhomogeneities 0=17982
 elec. resistivity and thermoelec. power, below and above melting pt. 0=7909
 electric field effect on electrons in narrow bands 2=10452
 electric field, var. with electron conc., large impulse currents 3=22919
 electric fields effects on elec. props. 2=10451
 electric thermal currents, in terms of collision freq. integrals 2=23277
 electric cond., h.f., of degenerate semicond. 3=25337
 electrical cond. due to self-activation 3=17842
 electrical cond. meas. in microwave field 4=1580
 electrical conduction and photovoltaic effects in materials with position-dependent band gaps 2=14519
 electrical conduction, sign, meas., liquid He temp. 3=16883
 electrical conduction, temp. depend., theory 2=21091, 23229
 electrical conduction, transverse, rel. to electron and phonon mutual dragging 2=3987
 electrical conduction, transverse rel. to electron and phonon mutual dragging 3=4901
 electrical conductivity, Heitler-London approach and d-electron conduction 1=8933
 electrical conductivity in magnetic field, theory 2=4009

Semiconductors—contd

- electrochem. electrodes, cathodic processes 1=20746
 electrode potentials in solution 1=7915
 electrodeless meas. techniques 3=342
 electrodes with two electrolyte contacts 3=18446
 electroluminescence, breakdown, phonon-defect interaction 4=4288
 electroluminescence, energy storage mechanism 4=7175
 electrolytic treatment, masking technique 4=23662
 electro-mechanical effect, resistance to indentation rel. to potential 3=23365
 electron cascade capture by ionized impurities, theory 4=12674
 electron centres, local, paramag. res. and relax. 2=23697
 electron chemical potential, rel. to band theory 3=2873
 electron density growth, rel. to negative differential resistance 4=11092
 electron density of states, highly impure semiconductors 4=12872
 electron distribution, inverse type 2=6435, 10455
 electron-donor recombination 2=8310
 electron effective mass, generalization of Bardeen's formula 1=17466
 electron effective mass, relation to energy gap and spin-orbit splitting 0=18049
 electron-electron scatt., effect on transport phenomena 2=8316
 electron-electron scatt. and transport phenomena in nonpolar materials 1=8936
 electron-electron scattering, theory and expt. 3=10732
 electron emission rel. to BaO adsorption 2=22241
 electron emission in electric field 1=17
 electron emission, field, energy distrib. rel. to effective mass 3=2014
 electron emission, field, energy distrib. theory 2=20016
 electron emission, field, image force relaxation effects 4=19079
 electron emission, secondary, as continuous multiplier 2=17881
 electron emission, secondary, of layers in pick-up tubes 1=521
 electron energy spectrum, effect of carrier density fluctuations 2=4002
 electron energy spectrum, effect of edge dislocations 1=6085
 electron energy spectrum, effect of screw dislocations 1=6086
 electron field emission 4=19080
 electron gas, nondegenerate, deviations from Ohm's law variational approach 0=1624
 electron gas, screening Coulomb potential 2=18655
 electron Hall mobility, effect of electron-electron scatt. 0=13584
 electron and hole fluctuations, nonthermal equil. 4=9887
 electron-hole junctions 1=6141
 electron-hole pair prod., transition probability 2=23273
 electron-hole pairs, energy of formation in Group IV, theory 2=6436
 electron-hole plasma, cylindrical, instability in mag. field 2=2069
 electron-hole plasma, magneto-surface props. 2=23282
 electron-hole scatt., semiconds. with band-gap impact ionization 3=25222
 electron and hole slowing-down times, non-equilibrium 2=23274
 electron and hole statistics in dislocated semiconductors 1=17659
 electron impact ionization 1=14400
 electron irradi. at low temps., cryostats, 4.2°K 4=11440
 electron mobilities in organic semiconductors, calc. from band and hopping models 4=15445
 electron motion in, Green's functions 1=15734
 electron-phonon interaction and energy spectrum, degenerate 3=20129
 electron-phonon interactions 2=23063
 electron-phonon interactions and transport phenomena 0=6013
 electron plasma, in mag. field, oscillations 0=17009
 electron plasmas, theory 0=2860
 electron processes, kinetics 1=6079-82
 electron relax., donor, by spin-orbit interact. 3=25219
 electron scatt. by ionized impurities, Born approx. 4=12874

Semiconductors—contd

- electron scatt. by phonons and impurities, theory 1=8934
 electron scattering on charged dislocations 2=10453
 electron scattering, on impurities and phonons 2=6440, 10454
 electron scattering on impurities, theory 2=21118
 electron scattering on impurities, theory 3=2867
 electron S-states, in hole field, Schrödinger eqn. 0=2804
 electron states, band and localized, theory, rel. to chemical binding 2=23263
 electron states and phonon spectra from i.r. spectra 3=15667
 electron systems, collective excitations, rel. to external fields 2=23267
 electron temp., elec. cond. and thermionic emission 2=18660, 23289
 electron temp. fluctuations and noise, high fields 3=17835
 electron temperature decrease by elec. fields 4=17388
 electron temperature, effect of electric field 1=14419-21
 electron "temperatures" direct meas. 3=10730
 electron transitions, from donor to acceptor state 2=8315, 10456
 electron transport in high elec. fields, distrib. functions 4=8114
 electron tunnelling in junctions, theory 3=6608
 electron velocity distrib., effect of interelectron collisions 0=10903
 electronic processes, charac. times, review 2=8313
 electronic spectra, low-temp., papers in conference, Kiev, 1961 3=24124
 electronic theory of catalysis on semiconductors, book 2=15143
 electronic transitions 1=19840
 electrons and holes, excited, ranges 4=20235
 electrons, hot, effect of high hydrostatic pressure 1=14409
 electrons, spin-lattice interact. 2=23709
 energy band structure, group-theory calc. 2=21122
 energy band structures, review 2=12502
 energy bands calc., tight-binding method 0=6027-9
 energy bands symmetry, without spin-orbit interaction 0=1543
 energy gap, effect of electron-lattice interact. 4=4014
 energy gaps, correl. with binding energy 2=2161
 energy gaps, depend. on chemical bonding 1=6139
 energy levels of conduction electrons in a mag. field 0=1548
 energy spectrum for low mobility 3=15563
 energy structure of complex semiconductors calc. 3=15568
 energy surfaces, toroidal, in crystals with wurtzite symmetry 1=934
 epitaxial growth of layers, "sandwich" method 4=7572
 etched surfaces, electron diffraction exam. 0=590
 Ettingshausen effect for cooling ~100°K 2=21129
 Ettingshausen effect, theory 0=18012
 excess carrier conductivity, kinetics, at high generation levels 3=22911
 excess carrier transport, review 4=28543
 excess carriers, decay, effect of electric field 0=9956
 excess carriers, lifetime 0=20894
 excess current carriers in magnetic field 2=4012, 6432
 excess minority carriers, decrease 2=18665
 exchange interact., indirect, through current carriers 4=26019
 excitation, by e.m. waves, forming "helicon" particles 3=6568
 exciton dissociation, by phonons 0=532
 exciton gas 2=12406, 14419
 exciton polarization, by low elec. fields, H-like model 0=13629
 exciton spectra 2=16820-1
 exciton states, Green's function approach 1=3747
 exciton states, Hamiltonian formalism 2=23121
 exciton theory 1=17469
 exciton wave, exponential growth conditions 2=18664, 23292
 exciton waves, Green's function, soln. 0=9836
 excitons, bound complexes 2=2068
 excitons, magneto-optical absorption, calc. 2=8062
 excitons, non-radiative ionization of perturbation centres 4=25910
 excitons, review 1=14222
 excitons, spectroscopy, for laser appl. 3=7330

Semiconductors—contd

- Faraday effect 0=7923
 Faraday effect 4=17565
 Faraday effect in anisotropic semiconds. 2=12581
 Faraday effect, general formula review 3=23047
 Faraday effect at i.r. freqs. 0=13677
 Faraday effect in many-valley semiconductors 1=19959
 Faraday effect meas. 2=8490
 Faraday effect, microwave, and guided waves 3=2875
 Faraday effect in non-degenerate semiconductors 1=12431
 Faraday effect, reformulation incl. multiple reflection effects 4=10159
 Faraday ellipticity of free carriers, depend. on scatt. mechanism 1=17666
 Faraday rotation, interband, theory 1=11356
 Faraday, Voigt effects 2=18797
 Fermi level calc. with electronic computer 3=20293
 Fermi level demonstration 1=11272
 Fermi level, position, effect of heavy doping 4=1574
 Fermi level, surface, rel. to band gap, barriers 3=20134
 ferro- and antiferromag., conductivity mechanism 2=23303
 ferro- and antiferromagnetic interactions 3=20565
 ferro- and antiferromagnetics, elec. conductivity 1=5009
 ferromagnetic, carrier recomb., spin-wave absorption 0=577
 ferromagnetic, magnetocaloric effect, meas. 0=2853
 ferromagnetic, spontaneous Hall effect, theory 3=22918
 field effect 0=20890
 field effect at low temps. 1=17658
 field effect meas. in transverse mag. field 0=15920
 field-effect modulation in quasi-intrinsic semiconductor 1=2420
 field effect theory 2=8320
 field emission of electrons, governing laws 1=316
 field emission in mag. field 3=16973
 field emission microscopy, cathode prep. 4=23519
 field emission, review 0=3782
 field emission, spectrometer 3=5691
 field emission, theory 2=3064
 film, local electron centres, near surface 4=1577
 film preparation by sputtering 4=20798
 films, diffused, conc. profile rel. to elec. conductivity 2=8279
 films, elec. cond., thickness and surface field depend. 1=1039
 films, forbidden bandwidth, thickness and temp. depend. 3=17843
 films, Hall effect and elec. cond., meas. apparatus 2=9492
 flaw solubility in heavily doped, theory 0=15916
 fluctuations, elec., appl. of Nyquist theorem 2=17773
 fluctuations, electrical, generation-recombination, Klaassens expression, corrections 3=17834
 fluctuations, electrical, i.f., electron-hole plasma instabilities 3=20281
 fluctuations, electrical, i.f., magnetohydrodynamic carrier motion 3=20280
 fluctuations, Fokker-Planck equation 1=18320
 fluctuations, homophase and heterophase, statistical theory 1=3737
 fluctuations spectra 0=14526
 fluctuations, symposium 0=20876
 fluid interfaces, electroconvection 1=2943
 forbidden band, discrete defect energy levels, and tunnelling 1=17766
 forbidden band width in ZnS-type structure 1=3760
 free-carrier absorption due to ionized impurities 0=18011
 free-carrier absorption, quantum theory 2=2223
 free-carrier lifetimes, from i.r. absorption relaxation times 0=4326
 free carrier light absorption 4=1709
 free carrier Voigt effect, anisotropic 4=15590
 free carriers with arb. energy bands, thermodyn. props. 4=28394
 g-factors and spin-lattice relax. of conduction electrons 4=28868
 galvanomag. anisotropy, warm electrons, calc. 4=28540
 galvanomagnetic effects, influence of conductivity gradients 1=7620
 galvanomag. effects rel. to layer structure inhomogeneities 2=8309
 galvanomagnetic effects, meas. instrument 4=12879

Semiconductors—contd

- galvanomagnetic props., thin films and surface layers 1=3723
 galvanothermomag. effects for nonparabolic bands 2=18666
 generation-recombination noise rel. to diffusion and surface recombination 1=8937
 generation-recombination noise and warm electrons 3=64
 glass-like 0=3263
 glasses, Fermi states, calc. 3=20918
 grain boundary conductivity, homogeneity, direct proof 4=6935
 group IV and III-IV cpds., band structure 3=10625
 Group I-V cpds., covalent bonding 2=6247
 Group III-V cpds., Faraday effect, i.r., rel. to effective mass determ. 2=23529
 Groups III, IV, V, "crystal hybridization" and covalent bond 2=23027
 h.f. magneto-acoustic resonance 0=1566
 Hall coeff. and resistivity meas., Dauphinee-Mooser circuit zero-point detector 4=8593
 Hall coefficient, temp. depend., at const. carrier conc. 1=14417
 Hall effect for high elec. field in many-valley semicond. 3=22916
 Hall effect, high-ohmic, electrode meas. arrangement 4=1583
 Hall effect, hot-electron, optical phonon scatt. effect 4=4129
 Hall effect in impurity conduction 1=19846
 Hall effect for low mobility, theory 3=15566
 Hall-effect reinforcement of h.f. mag. fields 4=12868
 Hall effect, theory, carrier drag effects 3=6575
 Hall effect, theory, for low mobility 4=1568
 Hall field relaxation at high frequency 0=18007
 Hall mobility, anomalous, rel. to impurity distrib. 2=12503
 Hall mobility and magnetoresistance due to hot carriers in strong mag. fields 3=10760
 Hall mobility, minority-carrier, meas. method 4=22694
 Hall mobility in nonpolar materials, interelectronic collision effects 1=14415
 heat conduction, book 2=3852
 heat conduction meas. by velocity method 2=5197
 heating of current carriers, relax. time meas. 4=1579
 heating in vapour, press. and temp. adjustment 4=10995
 heavily-doped, band structure 3=10741
 heavily doped, theory 3=17831
 heavily-doped, theory 4=1576
 "helicon" mode propagation for metre and decametre waves 3=22921
 heterogeneous, energy gap and effective mass, effect of gradients 4=12679
 heterogeneous, magnetoresistance asymmetry 0=9950
 high electron field effects 0=20893
 high-field and space-charge, review 3=13055
 high resistance, resistivity and Hall const. meas. 1=9518
 hole energy distrib. in elec. fields 4=25875
 holes, scattering by acoustic-mode phonons 1=11275
 homogeneity anal. using volume photo-e.m.f. 3=15587
 homogeneity meas. from plasma edge 2=16686
 hot-electron distrib. functions in many-valley semiconductors 1=17667
 hot electron theory, density matrix approach 2=16689
 "hot" electron emission 0=9066
 "hot" electron mobility tensor, integral eqn. 0=11671
 hot electrons, Boltzmann eqn., theory of avalanche multiplication 1=6133
 hot electrons, behaviour in microwave fields, calc. 1=8935
 hot electrons, distrib. functions and ioniz. rates 3=6573
 hot electrons, effect of phonon distrib. 3=10759
 hot electrons, electron-electron interaction 1=11283
 hot electrons, intervalley scatt. 1=10039
 hot electrons, prod. by u.s. waves 4=28393
 hot electrons, spectral shape and attenuation length in presence of finite absorption 4=25880
 hot electrons, symmetry behaviour 3=13054
 "hot" electrons, theory 2=631
 hot electrons, theory 3=17828
 human retina receptor elements 2=1034

Semiconductors—contd

Semiconductors—contd

plasma, growing helical density waves 4=17406
 plasma, hole—electron, mag. moment, meas. and theory 4=4027
 plasma injection, volume-controlled two-carrier currents, theory 1=1036
 plasma instabilities, observation conditions 2=20977
 plasma model, recombination processes 0=2859
 plasma oscill., electron-hole, l.f. 3=15476
 plasma oscillations, coherent excitation 1=7565
 plasma oscillations and short range interactions 1=14420
 plasma phenomena 4=15464
 plasma, pinched, moving, Doppler effect, e.m. waves 3=17827
 plasmas, growing helical density waves 3=8504
 plasmas, helical instabilities, calc. 3=13051
 plasmas, helical instabilities, theory 3=8410
 plastic deform., review 2=16951
 polar, carrier plasma oscill., coupling with lattice vibr. 2=10319
 polar crystals, elementary excitations with spin-open background 2=10293
 polar crystal model, in crossed elec. and mag. fields, excitation Hamiltonian 1=892
 polar, elec. cond. and Hall effect, with carrier scatt. 0=580
 polar, elec. conductivity and thermoelec. power 2=6439
 polar, h.f. conductivity, freq. depend. 1=1029
 polar, lattice screening in 0=2868
 polar, many-valley, mobility and thermoelec. power 3=2871
 polar, optical phonon shock excitation by charge carriers 4=22525
 polar, Seebeck coeff., polaron model 1=14523
 polar semiconductors, electron mobility, conc. and temp. depend. 3=22912
 polyacrylonitrile, conducting mechanism 3=20341
 polymers, inorganic, Fermi states, calc. 3=20913
 potential distrib. meas., analogue method 3=17907
 potential distrib. in rectangular bar, for four-point probe meas. 4=22698
 powdered, photoconductivity using photodielectric effect 0=20924
 pressure effects on props., review 1=7630
 progress, book of review articles 0=20877-9
 progress, review articles 2=14513, 18670
 proton-neutron damage correl. 3=25308
 proton-neutron damage correl. 4=4090
 quantized system, in weakly dissipative medium 0=3459
 quantum mechanical model, recombination probability 0=1741
 radiation effects 0=20850
 radiation effects 2=21126
 radiation effects, review 4=30591
 radiation-induced defects 4=1535
 radiationless transitions, 2 harmonic oscillator wave-func., overlap integral 0=522
 radiative recombination, review 1=3746
 Raman effect, first-order lattice vibration, theory 3=25448
 rate of diffusion-limited annihilation of excess vacancies 0=2864
 recombination, capture cross-sections 0=4330
 recombination centres, capture cross-section, determ. method 2=23286
 recombination centres, characteristic parameters 1=17657
 recombination centres, inhomog. distrib. meas. 2=23344
 recombination centres, nonuniform distrib., photodiffusion effect 4=1674
 recombination coefficients, in Coulomb repulsion field, temp. depend. 0=15907
 recombination at defects, thermodynamics 1=19841
 recombination-generation noise, unified statistical approach 2=8311
 recombination, at impurity centres, capture coeff. 1=14404
 recombination, interband collisions 2=8314
 recombination through excited states, transient lifetime 3=20287
 recombination mechanism 3=22917
 recombination mechanism, exciton capture by impurity centres 4=9913
 recombination for photo-excitation from impurities 3=849

Semiconductors — contd

- recombination processes, by Auger effect, negligible influence 0=13590-1
- recombination processes, effect of excited multielectron centres 3=4910
- recombination processes through multielectron centres 3=10752
- recombination radiation, spontaneous and stimulated 4=6777
- recombination statist. for Auger effects 3=13090
- recombining carrier motion rel. to surface space-charge layer 2=23261
- refractive index dispersion near absorption edge 4=13002
- refractive index of films, effects of illumination 2=18793, 21227
- refractive index meas., polarization-photometric method 4=17545
- refractive index, oscill. in mag. field, in intrinsic absorption edge region 2=2220
- relation with giant molecules 2=6430
- relationship between, energetic, electrophysical and mechanical properties 0=573
- relaxation times meas. near 10^{-8} sec. 3=16885
- resistance meas. at high frequencies 4=17485
- resistivity and Hall const., meas. cit. analysis 0=19587
- resistivity meas., four-point probe 3=24160
- resistivity meas., four-probe, geom. factor calc. 4=1584
- resistivity meas., probe 2=21128
- resistivity meas., review of methods 2=14514
- resistivity meter, contactless 1=13049
- resistivity meter, non-contact 4=22701
- resistivity tensor, two-band, components 4=20341
- resonance tunnelling 4=4033
- Resource Letter, Scr-1 4=20340
- review of progress (book) 1=5007-8
- rhombohedral, electron excitation by phonons 2=21202
- screening, with many-valley electron spectrum 2=2133
- screw dislocations, elec. field and charge distrib. for thermal equil. 4=6846
- secondary-emission props. rel. to periodic system 2=5376, 7657
- Seebeck effect 0=20943
- Seebeck effect, anomalous, mechanism 2=16760
- Seebeck effect theory in plastically deformed materials 1=17807
- semiconductivity prediction rules for crystal lattices 0=11682
- semiconductor catalysts, theory 0=21267
- semiconductor-electrolyte space charge capacity meas. 2=18653
- semiconductor-metal contact effects, Johnson-Rahbek 4=12877
- semiconductor-non-aqueous electrolyte interface, electronic exchange 1=1483
- semimetals, magnetoresist. oscill. due to optical phonon scatt. 2=18639
- semimetals, u.s. amplification by e.m. fields 2=15683
- shallow impurity states and ioniz. energy 4=1573
- sheet resist. nonuniformities, four-point probe 4=22697
- sheet resistivity meas., using square four-point probe 0=15898
- Shubnikov-de Haas oscillations, rel. to spin 3=844
- slices, radial resist. gradient, correction factors 4=20350
- small injections, graphical data analysis 3=20279
- solids, photo-process fluctuations 2=8430
- space charge distrib. 4=22689
- space charge, field and potential distrib. 3=10757
- space-charge-lim. currents, rel. to saturated photo-currents 4=28637
- space charge limited currents with trapping 2=14524
- space-charge-limited currents, with traps 3=8503
- space charge region, equilibrium, rel. to low free carrier conc., theory 4=28550
- space charge regions 4=28547
- space-charge zones near surface, carrier motion 3=2859
- specific heat 4=12638
- specific resistance by h.f. method 0=2855
- spectra, i.r., and electron states and phonon spectra 3=15667
- spectra, intraband transitions absorpt. 4=22831
- stability of non-stoichiometric compounds 0=13516
- statistics of multi-level impurities 1=7631

Semiconductors—contd

- steady-state electronic processes, characteristic times 0=576
- steady-state injections in p-type, theory 3=10751
- strongly-doped, theory, interband transitions 4=6937
- structures, current-voltage relations 3=2880
- study of damping capacity 1=10206
- super-cell structure 1=1386
- superconducting, possibilities 4=18568
- superconductive transformation, necessary conditions 2=11552, 13502
- superconductivity in many-valley case 4=14513
- superconductor, semiconductor model, tunnelling effect 3=1894
- supersonic carrier drift, rel. to plasma sound wave generation theory 3=22915
- surface charge density at contact due to acceptor-donor bonds 4=7694
- surface charge, plots of functions for calc. 2=23300
- surface charge, potl. profiles in space-charge region 3=22913
- surface charge rel. to surface potential 3=13049
- surface cond., variation by adsorption, transverse elec. fields and irradiation 1=3738
- surface conductivity, potential, meas. 2=21116
- surface conductivity theory, boundary conditions 2=16691
- surface conductivity theory, relax. time energy depend. 2=16692
- surface effects on signals in waveguides 3=19454
- surface elastic waves 1=4400
- surface elec. props., mapping by electron "mirror" 1=17668
- surface electric field 1=5015
- surface energy, calc. for diamond and zinc blende structures 0=13467
- surface Fermi level, rel. to band gap, barriers 3=20134
- surface free carrier concentration 1=5015
- surface free-radical recomb., rel. to luminesc. 4=20476
- surface injection phenomena, graphical anal. 4=12876
- surface investigation, etching method 2=23910
- surface ionization, review 1=4567
- surface ionization, temp. depend., theory 4=26023
- surface layers, transverse impedance rel. to freqn. 3=13053
- surface local electron centres, optical props. 4=12741
- surface mobilities of minority and majority carriers, calc. 2=2134-5
- surface neutralization of incident ions, Auger-type, theory 1=7632
- surface phenomena, study by field effect 1=8931
- surface photovoltage rel. to optical absorption, minority carrier diffusion 2=2131
- surface potential, non-selective action of light 1=3788
- surface potential under metal contact, det. 1=8938
- surface properties, conference, Moscow (1961) 4=15528
- surface props., recomb. velocity rel. to transistor gain 2=4052
- surface props., review 1=6138
- surface props., review 2=10449, 12505
- surface recomb. at higher injection levels 4=26022
- surface recomb. rate, under nonsymmetrical boundary conditions 1=14416
- surface recombination centres, position of energy level 1=14399
- surface recombination change caused by sorption of water molecules 1=14398
- surface recombination in electron-bombard. induced conductivity 1=20028
- surface recombination at higher injection levels 4=30616
- surface recombination rate, stationary photocond., surface potl. depend. 1=1032
- surface recombination theory, rel. to internal transitions 2=10458, 14517
- surface recombination velo. validity criteria 4=22695
- surface recombination velocity, validity rel. to diffusion velocity 1=6143
- surface space-charge calc. 0=18006
- surface space charge curves 1=5015
- surface space-charge layers, current paths 1=3745
- surface state-majority carrier exchange kinetics 4=20348

Semiconductors—contd

- surface states, i.r. absorption from frustrated total internal reflections 2=6575
- surface states in one-dimensional crystals 1=7521-3
- surface states relax. 2=10450
- surface states, "slow", relaxation theory 2=10447
- surface states, theory 0=2878
- surface transport properties of filaments, theory 1=17647
- surface transport properties of filaments, theory 2=4001
- surface transport, in space-charge layers, theory 0=9955
- surface transport theory, review 1=3742
- surface transport and thermoelectric power 3=2858
- surfaces, conference 1=1028
- surfaces, gas adsorption 1=15181
- surfaces, prep. and props. 4=4136
- surfaces, purification methods 4=29173
- survey of outstanding problems 3=843
- synthesis, oxygen reactions, chem. potential series 3=3391
- thermal cond. meas. in mag. field 3=1850
- thermal cond., Onsager's theory 1=6077
- thermal conductivity, below λ -pt. of He, meas. and cal. 4=30531
- thermal conductivity considered from kinetic theory 0=8561
- thermal conductivity and heat capacity, meas. 1=4490
- thermal conductivity meas., Ångström method 2=22074
- thermal diffusivity meas. 0=11669
- thermal expansion, effect of impurities 3=17664
- thermal and thermoelec. props. non-stationary meas. method 2=16693
- thermally activated linear response functions 4=16062
- thermally stimulated current theory 0=15896
- thermionic electron emission from narrow energy band 4=27563
- thermionic emission, effect of electric field 1=14419-21
- thermionic emission, electrons and positive ions, laser induced 3=24333
- thermionic emission, time dependence 1=16370
- thermocathodes, work function 1=4632
- thermodynamic activity, and intrinsic ionization equilibrium 3=17836
- thermo-e.m.f. due to hot carriers, meas. 4=1696
- thermoelectric applications, review 2=5296
- thermoelectric efficiency, determination 1=14524
- thermoelectric emission in strong fields 2=21203
- thermoelectric emission in strong fields 3=2982
- thermoelectric figure of merit, variations 2=12549
- thermoelectric power, integrals evaluation 0=1690
- thermoelectric power, longitudinal, rel. to phonon drag 4=10138
- thermoelectric power, in mag. field, phonon relaxation 0=1692
- thermoelectric power, in quantizing magnetic field 2=4078, 6505
- thermoelectric props., meas. 0=1688
- thermoelectric refrigeration and generation 4=12996
- thermoelectric Seebeck coefficient, rapid meas. method 2=2139
- thermoelectric and thermomagnetic effects 4=22812
- thermoelectricity, figure of merit, impurity scatt. effect 0=1689
- thermoelectricity, for low mobility 3=25425
- thermoelectricity, two-band model, inner elec. field 0=20942
- thermoelement efficiency, effective masses and mobilities 0=3732
- thermoelements, carrier concn. optimization 4=10139
- thermogalvanomagnetic effects, quantum theory 4=28517
- thermomagnetic calculations and future devices 4=4135
- thermomagnetic figure of merit of two-band multivalley semicond. 4=22690
- thin films, absolute absorption coeff., thickness depend. 0=9951
- thin layers, Hall mobility and resistivity meas. 4=28552
- III-V, current instabilities in applied elec. field 4=26044
- III-V, current oscillations, microwave 4=4132
- III-V group, model using chemical bonds 4=4126
- toroidal isoenergetic surfaces, conditions 4=12690
- transient recombination from high injection levels, meas. using p-L-n structures 4=15529
- transition processes meas. by microwave techniques 4=1581

Semiconductors—contd

- transport, experimental, recent developments, review 3=10730
- transport in material with anisotropic mobilities 2=14520
- transport phenom. with non-equil. concns. 3=17841
- transport phenomena for low mobility 3=15562
- transport phenomena, low-temp., low mobility 4=1570
- transport phenomena in slightly ionized gases, theory and applications 0=8989
- transport phenomena, theory 1=17648
- transport phenomena theory 2=4015, 8326
- transport props. of added carriers, alternative derivation 1=11279
- transport props. of cubic semicond. with nonparabolic energy bands 4=28544
- transport props. of mixed valence semiconductors 4=22693
- transport theory, review 3=10731
- transport theory, survey of new techniques and ideas 2=23270
- transport theory, warped energy surfaces 3=20286
- transverse conductivity, in strong mag. field, considering inelastic electron scatt. 1=14418
- transverse mag. effects calc., weak-field approx. invalid 3=10754
- transverse magnetoelec. effect, in weak scatt. limit, quantum theory 0=2842
- transverse photomagnetic effect 1=11328
- trap energy distrib. from glow curves, theory 3=846
- trapped electrons, re-emission, role in photocond. rise theory 2=2189
- trapping level parameters in CdS-type, meas. 3=25231
- trapping and recombination, at many-electron centres, kinetics 1=1033
- tunnel effect, analogy with optical incomplete reflection 3=17837
- tunnel effect with impurity scattering 3=20291
- tunnelling, direct and phonon-assisted, theory 1=2404
- tunnelling, independent-particle viewpoint 1=10639
- tunnelling, interband, theory and effect of longit. mag. field 2=12413
- tunnelling between localized centres, rel. to internal field emission, theory 1=6134
- tunnelling, metal-insulator, effect of traps 4=6910
- tunnelling, multiphonon processes 2=23279
- tunnelling, theory 1=5010
- two-band, thermoelectric figure of merit, theoret. bound 3=17967
- two-carrier, concn. and mobility of charge carriers 0=15900
- two-carrier currents, volume-controlled 2=23228
- two-carrier currents, volume-controlled; injected plasma case, theory 1=1036
- two-carrier space-charge-limited current flow 0=2863
- II-IV and III-V cpds, Cu impurities, excited states 3=10810
- type and doping determination, i.r. techniques 2=8312
- u.s. amplification in crossed fields 3=12921
- u.s. attenuation in mag. field, calc. 0=13504
- u.s. attenuation in mag. field, Fermi velocity det. by high-field tilt effect, theory 0=20767
- U.S. Bureau of Standards work, review 2=18505
- u.s. excited, in mag. field, effect on charge carriers 0=9851
- u.s. propag. rel. to piezoelectricity and deform. potential 4=12626
- ultrapurification, conference, Boston (1961) 4=23319
- ultrasonic amplification in piezoelectrics by d.c. field 2=18784
- ultrasound amplification 4=22483
- ultraviolet reflection and critical points 2=21117
- uniaxial, birefringence, theory 0=2931
- vacuum boundary, image forces 0=17077
- valence band for holes, anisotropy in mag. field 4=6785
- valence, elec. cond., in strong elec. field, at low-temp. 2=23272
- valence type, conduction at low temp., in high fields 0=15913
- very degenerate, band structure, theory 3=10740
- Voigt effect, due to free carriers 3=6643
- Voigt effect for free carriers, theory 2=6548
- Voigt effect, theory and exptal. verification 1=3819
- volume-gradient effect 2=23262
- volume-gradient phenomena 1=17644
- volume recombination lifetime, meas. 1=14427

Semiconductors—contd

- "warm" electron effect in polar materials 2=14522
- warm electrons distrib. function, effect of $e-e$ interact. 3=8499
- warm electrons, variational treatment 0=18009
- wires, space-charge and pot. distrib. 2=6446
- work function, rel. to gas adsorption 2=22240
- work function and sec. electron emission 0=2374
- Zener breakdown and residual resistance 1=1021
- Zener breakdown, rel. to residual resistance 2=23275
- Zener tunnelling, in const. field 0=4332
- with zero energy barrier, equilb. props. 3=25333
- zone refining, automatic apparatus 0=16271
- O₂ chemisorption kinetics 4=20832

Series

- asymptotic expansions, from generalized series 3=9321
- Bessel functions, formulae 4=18025
- Bessel functions, large order, expansions of integrals 4=16014
- celestial mechanics, coordinates of unperturbed motion, convergence 3=23658
- Chandrasekhar's method for diffuse scattering problem, convergence 0=19003
- Fourier, associated with duty cycles 0=7063
- Fourier, hollow tube charge density integral solving technique 1=10659
- Fourier, summation by analogue computer 1=17984
- Fourier, von Eller optical synthesis machine, testing 1=16066
- generalized asymptotic series 3=3704
- interpolation, "ideal" concept for data coherence 2=9145
- Laplace, generalization to arb. powers and functions of distance 4=11022
- in multi-beam interference, anomalous divergence 0=2245
- related to hypergeom. functions F_1 and F_2 3=18688
- spherical harmonics, arb. functions, three-dim. addition theorem 4=11023
- summation, divergent, in time meas. 3=11668
- Taylor's, in zero-point energies calc. 3=12794
- two-centre expansion for powers of distance between two points 4=11024

Spherics

Shock tubes

(Heading introduced in 1963)

- rel. to attenuation of repeated shock waves 4=21226
- boundary layer flow, tracer study 3=7285
- boundary-layer separation and shock bifurcation detection 3=18903
- bursting-diaphragm, general-purpose 3=18902
- coupled to time-of-flight mass spectrometer 4=4691
- coaxial electromagnetic, acceleration mechanism 4=18334
- contact surface, origin of luminosity, gas mixing 4=29702
- with current crowbar, snowplough plough model 4=29700
- diaphragm disk scriber 4=18336
- discontinuity, gas behind, impurity ionization meas. 4=11291
- e.m., accel. and decel. of plasma 4=507
- e.m. driven, plasma cloud structure 4=18826
- e.m. driven, plasma luminosity 4=18827
- e.m., plasma prod. by shock, small amount 4=5289
- e.m., wave attenuation by radiative losses 3=1758
- 8 × 2 in., instrumentation 3=1763
- electric arc-driven 3=16702
- electric, precursor arc use 4=27251
- for electricity direct conversion, m.h.d. 4=18665
- electromagnetic, luminous front thickness 4=18842
- electromagnetic, origin of driving force 3=11859
- electron density fronts, obs. by n sec pulse technique 4=8313
- end-plate effects, at Mach 13 4=29701
- evacuation, wide aperture valve 4=27235
- explosion driven 3=7280
- flow nonuniformities, wall boundary layer effects, small perturbation effects 4=29697
- hot-flow length and testing time, viscosity effect 4=14263
- hydrodynamic tube, with liquid driven by gas 3=11858
- hydrogen, eqn. of state verification 4=18795
- hydromagnetic, mag. fld. investigation 4=8312
- ionization, chemical, study, with mass spectrometer 4=13713

Shock tubes—contd

- ionization probes use, design 3=1762
- Langmuir-type probes, for stagnation point meas. 4=29699
- m.h.d., "switch-on" shocks 4=14262
- magnetic, H, parasitic elec. discharges, contact/shock fronts coincidence, plasma luminescence 4=24305
- magnetic, with variable driving field, theory 3=202
- in microphone calibration, at high noise levels 4=14305
- plasma, discharge between coaxial cylinders, velo. meas. 3=14252
- plasma front velocity 4=18832
- plasma, non-equilib., electron-ion reaction rates 4=19058
- precursor photoionization 3=9550
- precursor waves 4=270
- pressure bar gauge, piezoelectric 4=29703
- propagation of shock waves in conical tube 4=18321
- quantitative spectroscopic studies 4=8410
- recombination rates of atoms, meas. 3=18905
- shock reflection obs., 0.1 μ sec risetime pressure gauge 4=16006
- spectroscopy, review and recent results 4=18335
- temperature meas., electron, double-probe meas. 4=2773
- temperature measurements in the OH⁺ π band system calc. 3=7281
- thermal decomp. study of tert-butyl cpds 4=15839
- transition from laminar to turbulent boundary layers 3=7283-4
- valve modification 4=18337
- velocity of gas flow behind discontinuity, var. 4=11290
- for wind tunnel, mixing chamber for combustion gases 4=21169
- CO₂ transmission meas., 1500°-3500°K, 4.25 μ 4=22373
- H₂O driven, pressure varn., deviation from theory 4=8311
- H₂O vapour condensation on walls 4=18496
- Ne I transition probab. meas. in e.m. T-type tube 4=19961
- T, luminous and shock front obs. 4=271
- T-shaped, plasma formation in side arm 4=5288
- Xe ionization, elec. cond. 4=14581

- bibliographical review 0=10631

Shock waves—contd

blast, calc. of rear temp. and radiation 4=24297
 blast pressure gauges with ferroelectric ceramic elements 4=21009
 blast scaling 1=1765
 blast-wave density gauge 4=2777
 blast waves, in conical tubes 0=10725
 blast waves in spherical, cylindrical and plane shocks 1=12911
 body of revolution, nose, pressures and temps. 3=197
 Boltzmann eqn. soln. using Burnett approach 3=14244
 Boltzmann eqn., using distrib. function formula 3=21478
 boundary-layer effects in shock tube 1=11779
 boundary layer interaction problems, upstream disturbance velocity 1=15935
 breakdown wave propagation, theory 3=1956
 brittle medium, on explosion, front 3=23970
 Burgers' equation, applications 1=6887
 in cavitation, origin, Rayleigh's theory, air content depend. 0=6860
 in cavitation, oscillatory 0=14598
 in chemical kinetics, use of reflected waves 3=13594
 chemical reaction effects, two Mach numbers for h.f., l.f. 4=16138
 in collision-free plasmas 3=12216
 collisionless, in plasma 1=18841
 comet atmospheres, interaction with solar corpuscular stream 4=10885
 comets, excited by solar particles, theory 3=9181
 compression, spherically symmetrical convergent 1=15937
 compression wave intensification, on interaction with flame front 0=14895
 conductivity discontinuity in originally non-conducting gas 1=19011
 conference, Gif-sur-Yvette (Autumn 1961) 2=15132
 conference, Paris (1963) 4=11507
 conical shock tubes, design and performance 1=4372
 conical supersonic flow, higher-order approx. 3=159
 constant strength, propagation, homentropic motion 0=6861
 as continuous wave-function, existence theorems 0=991
 continuum radiation from ionized inert gases 2=21931
 current sheet in plasma gun 2=7630
 curvature of shock fronts in shock tubes 3=18904
 curved, in conducting gas flows, in mag. field 4=29691
 converging spherical wave, stability 1=2779
 critical viscous sub-layer in boundary layer interaction 1=10533
 curvature and extent in argon shock tube 1=10536
 curvilinear, flows behind wave front 3=16697
 cyanogen, dissociation energy by X-ray densitometry 1=11131
 cylindrical, exact analytic soln. 3=3851
 cylindrical, magnetically driven 1=12914
 cylindrical, in mono- and diatomic gases, homology solution, numerical calc. 4=14254
 cylindrical, precursor electrons ahead 3=1759
 cylindrical shock-mag. field interaction, similarity soln. 2=7241
 cylindrical, spherical, in monatomic cond. fluids 3=21965
 damping, mag. fld. effect 4=11773
 decay, effect of inhomogeneity, theory 4=2768
 deflagration-to-detonation transition 0=6999
 demonstration 3=9546
 density measurement, interferometric, effect of high gradients 4=214
 density profile measuring instrument 1=8152
 detection by glow discharge probe 4=8314
 detection, pressure sensing probes 0=3583
 detonation, in dilute sprays 1=18458
 detonation front, in exploding O_2 - CO_2 mixtures 0=994
 detonation, gaseous, laminar, generation structure 3=18895
 detonation generated plasmas 1=12915
 detonation Mach, high velo. and press. 4=16176
 detonation pressure, by crusher rod compression 0=10351
 detonation process 0=103
 detonation, regular motion condition generalities 4=16175
 detonation vel., condensed explosives 3=20992
 detonation vel. rel. to front shape 2=17500
 detonation velocity rel. to front shape 3=3849

Shock waves—contd

detonation-wave propagation, "self-induction" 4=2775
 detonation wave, spinning and stability 1=18457
 detonation waves from conc. high explosives, parameter calc. 3=11853
 detonation waves in gaseous HN_3 , calc. of characteristics 3=3850
 detonation waves, Mach reflection 1=10538
 detonation waves, missile technique of study 2=9305
 detonation waves near hot boundary 3=18896
 detonation waves, oscillations, optical study 1=18456
 detonations, large rate parameters 3=21487
 diatomic gas behind, dissociation, impurity effect 4=30482
 differential equation reduced form system, continuous solns. 4=11292
 diffraction of oblique wave 3=21482
 diffraction of plane wave 3=21481
 diffraction of plane weak waves by contours of arbitrary shape 4=14257
 diffraction round contours of arb. shape 3=23972
 diffusion of ionized gas behind wave front 1=16275
 discharge pin, for transient event meas. 4=14258
 in discharges, in air and hydrogen, at 300 kc/s 1=4589
 as discontinuities in 1-dimens. gas flow 1=6882
 discontinuity conditions across fronts 4=21071
 discontinuity decay, in continuous medium 1=7057
 discontinuity propagation in sound waves 1=10537
 in dissipative fluid in unsteady flow 1=8149
 dissociation, behind wave front, change in gas parameters 1=2777
 dissociation of diatomic molecules behind shock front 0=14111
 through ducts of variable cross-section 0=10726
 e.m. driven, attenuation, radiative losses 3=1758
 e.m. field interaction 3=16945
 e.m., in gyromag. media 3=24466
 e.m. produced, luminous phenomenon, refl. study 3=23971
 e.m., in transmission line with unsaturated ferrite 4=21224
 e.m. wave refl. and refr., Fresnel formulae 4=3143
 elastic and electromagetic, combined 2=19645
 elastic precursor waves, decay 4=5278
 in elasto-plastic medium, plane propagation 4=21223
 electric discharge shock tube diagnostics of plasmas 1=5475
 electrically driven, microwave studies 3=21488
 electrically excited, velocity 0=7210
 electrically produced, interaction with mag. field 2=1190
 electrodynamic excitation procedure 3=1757
 electromagnetically driven, luminosity behind, origin 3=7282
 electron distrib. in shock tubes 1=18817
 electron-driven, theory 1=10540
 electrostatic, in zero-temp. plasma 0=12620-1
 emission of Na_2 bands behind shock fronts 0=5946
 entropy and velocity 0=2203
 equation of state adiabatic discontinuity sign at melting 4=18491
 examination, by streak interferometry 0=3642
 excited atom distrib., radiation meas. 3=14243
 exosphere, hydromagnetic, propagation 4=23776
 exosphere, outer, hyperwaves 2=13053
 in exploding gas, study using multibeam cathode-ray tube 1=324
 exploding wire, streak interf. obs., two wavelength, temps., electron conc. 3=18900
 from exploding wires, review. 3=199
 explosion, elec. cond. in wave-front 0=7061
 explosion-generated, finite difference net 4=16169
 explosion of ionized air channel 3=4124
 explosions, confinement by gas boundary 2=4542
 in explosions under water 1=1790
 Fermi-Dirac gas 0=8693
 in fissionable gas, by neutron irradiation 4=18332
 flame propagation, in rough tubes prior to detonation 0=10809
 flow behind, rel. to Rayleigh problem 2=20126
 flow behind, supersonic, 2-dimensional steady 1=18453
 flow duration in l.p. shock tubes 1=165
 flow of gas around blunt body, delayed vibration excitation 4=18227

Shock waves—contd

flow, hot, 1 in. diam. tube, duration 2=19600
 flow, in magnetic annular shock tube 0=1195
 flow meas. in shock tubes using fine unheated wires 1=2786
 flow mechanism, shock tube study 1=8150
 flow round point-fronted bodies, numerical calc. 4=14256
 in fluid, prod. by explosion 1=18380
 in fluids, 4 theorems for possible flows 4=2978
 fluids, perfect, shock equations, correction terms 0=10730
 formation in expanding gas jets 2=11404
 formation, and 1st and 2nd order discontinuity propagation 3=21483-4
 formation from self-excited oscillations in closed pipe 4=5281
 formation in Laval nozzles 4=8309
 formatn., weak disturb. reflectn. from sonic line. 3=196
 formatn. weak disturb. reflectn. from sonic line 3=5489
 in 446 cm electrically driven tube 4=24304
 four shock configuration 2=11399
 free radicals, flash absorption spectroscopy 0=17760
 gas, conducting, in crossed elec. and mag fields 2=3146
 gas density, meas. rel. to Mach number, by electron beam method 4=14259
 gas dynamic—mol. flow transition, review 4=11296
 gas flow behind, oscillatory equilb. attainment 2=19599
 gas flow next to wave, boundary-layer theory 2=17499
 gas flow temp. 2=9309
 in gas, interaction of plane waves 4=18346
 gas, internal relaxation or zero energy reactions, shock wave 3=23921
 gas ionization, in e.m. field, piston problem 0=3842
 gas, monatomic, smoothing-out, asymptotic law 2=13359
 gas monoatomic, smoothing-out asymptotic law 3=5488
 gas, non-monotonic changes behind front 4=18343
 gas, polytropic, flow, straight-line characteristics 2=21932
 gas, radiation, cooling after shock heating 4=18482
 gas-shock luminosity against transparent surfaces, extinction 4=11295
 gas, ultrarelativistic, attenuation, interact. with rarefaction wave 2=21942
 gas, ultrarelativistic; attenuation, interact. with rarefaction wave 3=7236
 gas of variable density, reflection 2=19595
 gases, attenuation of guided waves 4=21226
 gases, detonation wave velocity meas. 3=198
 gases, electron-driven, theory 2=5044-5
 gases, ideal, finite diff. calc. far from explosion 4=18345
 in gases, plane, homology soln. numerical calc. 4=18342
 gases, real, ideal analogy 0=12454
 in gases, 700-kbar, Mach reflection 2=5046
 gases, with variable sp. ht., parameters behind shock front 0=8740
 gases, viscous and heat-conducting, hyper-sonic flow. 3=160
 gasomagnetic waves, density jumps, velocity, collision pressures 1=13167
 generation by flame in explosive gas 4=5294
 glass, meas. with resist. transducer, 100-200 kbar 4=21225
 gradients, behind shock, in 3-dimens. gas flow 4=29692
 granite, meas. with resist. transducer, 100-200 kbar 4=21225
 in gravitational fields 0=10590
 gravitational waves, general propag. law 1=1683
 heat exchange and gas dynamics, conference 4=8230
 heat gauge records, interpretation 1=11781
 in heterogeneous atmosphere, energy density and temp. behind front 4=8315
 hexogene crystals, velocities and effects 0=16776
 high-intensity stress pulses, meas. 0=5086
 high-speed, in magnetic annular shock tube 0=1194
 homology parameter calc. for high Mach number 3=9544
 hydrocarbon—air mixtures, self-ignition 1=12916
 hydrodynamic eqns., relativistic, unsteady, in Minkowski space 2=15470, 19415
 in hydrogen plasma, elec. cond. meas. 2=19934
 hydromagnetic, "collision-free" rel. to turbulence 3=7540
 hydromagnetic, growth, effect of transverse mag. field 1=13169
 hydromagnetic, in linear pinch discharge 1=16336

Shock waves—contd

hydromagnetic shock propagation in inhomogeneous gases 1=10774
 hydromagnetic, with transverse field and viscous dissipation, structure 3=11855
 hydromagnetic, Varenna lectures 1=5438
 hydroxyl radicals, kinetics 0=6408
 hypersonic, electron and particle densities behind 0=16775
 hypersonic flow past slender cone 4=18228
 in hypersonic gun tunnel 0=4976
 hypersonic shock layer, m.h.d. support 3=18901
 hypersonic waves, density meas. using β -rays 2=64
 hypersonic wind tunnel, spectral meas. of stagnation temp. 1=13015
 hypervelocity wave phenomena, in condensed explosives 0=16378
 ideal gases, absence of temperature gradient 3=16696
 impact, metal, hypervelocity 3=21486
 impact point of falling body det. 0=912
 in inert gas, alkali smoke seed effects 4=29679
 in inhomogeneous gravitating gases, propagation, Chisnell's method 1=2780
 initiation of PETN explosive by plane wave 1=11621
 instability, anisotropic, collisionless wave in rarefied plasma in mag. field 3=16930
 interaction with e.m. field 0=19911
 interaction with flame fronts 0=12105
 interaction with gas flows carrying small particles 4=18338
 interaction in gases, Ar—air obs. 4=21227
 interactions, triple, Mach effect, theory 3=3847
 interferometer profile determ., e.m. waves, Fabry—Perot 3=21479
 interferometer studies, modified double-slit apparatus 1=2781
 interplanetary space, rel. to SC mag. storms 2=15282
 in interstellar gas, from ionization fronts 1=2586
 in interstellar gas, from ionization fronts 1=2587
 interstellar space, cumulative 4=29417
 ionization equilibrium behind front in atomic gas 4=18330
 ionization behind, kinetics 3=19169
 ionization, precursor, calc. 4=269
 ionization, rear, ionizing rad. effects 4=18329
 ionized fluid, compressible, hydromagnetic wave propagation 0=11030
 in ionized gases, attached, stationary 1=5569
 in ionized gases, magnetically driven 3=7278
 ionizing cylind. shock in transverse mag. field 4=8918
 ionizing, slow, internal struct., computer calc. 4=18325
 ionizing, structure in mag. field 2=13357
 ionosphere, vertically travelling, due to nuclear explosions 0=16773
 in iron and steel, rarefaction 2=2758
 in iron and steel, rarefaction 3=3852
 isentropic fluid, development from finite-ampl. waves 4=14253
 jets, supersonic, gas mixture separation 0=16726
 jump conditions, effect of ionization 4=16174
 laminar—turbulence change in boundary 4=24298
 laminar and turbulence theories in mag. field 3=21844
 large-amplitude waves in tubes, schlieren study 1=8153
 layers, detached, radiation—convection coupling 2=9300
 leading edge of shock-induced boundary layer 3=1753
 light emission from compressed gas layers 4=18324
 light emission, under cosmic condition 2=62
 liquids, e. m. produced, front thickness meas. from acoustic freq. spectrum 4=24300
 liquids, photography of, with compressed A flash source 0=19127
 in liquids, shock-front thickness from acoustic spectrum 4=5290
 longitudinal in plasma columns 3=7530
 longitudinal, quasi-transverse, in elastoplastic medium 3=1749
 low-pressure, test time reduction 3=21492
 luminosity behind waves in Xe 1=15938-9
 luminous, by electrical discharges at low pressures 1=6888
 luminous phenomena, in e.m. shock tubes, interpretation 3=16701

production by projectiles from helium gun 1=9090
production, in spark gaps 4=266
propag. of strong discontinuities in multi-component
medium 1=15940

Shock waves—contd

propagation, basic concepts and relations, elementary
discussion 1=15933
propagation, calc. method 0=19278
propagation in detonated compressible matter 1=15934
propagation in detonated compressible matter 1=11776
propagation, developments, conference 3=11675
propagation, due to point detonation 0=6863
propagation, into earth 0=19280
propagation, to earth from falling body 0=57
propagation in elec. and mag. fields rel. to e.m.
wave excitation 2=17954
propagation in a heat-conducting gas 3=18899
propagation in homogeneous media, second-order
approx. 2=1181
propagation in hydrodynamic conical shock
tube 4=18321
propagation in inhomogeneous gases: hydromagnetic
shocks 1=10774
propagation in inhomogeneous gases, spherical
waves 1=18455
propagation in inhomogeneous medium 3=3848
propagation inside stars 3=23692
propagation of intense shock waves into the earth 1=6584
propagation at moderate strength, theory 3=14249
propagation in moving medium 1=15941
propagation in perfect conductors in mag. field 2=5047
propagation, qualitative differences from linear
waves. 3=200
propagation in side arm of T-shaped shock
tube 4=5288
propagation, simult. difference eqns. 1=5292
propagation in solids and compactible
media 3=11856
propagation, in solids, theory 0=12453
propagation in stellar envelopes 1=15508
propagation in strong spark discharges, theory 1=18785
propagation in switching tubes by microwave
pulses 3=3846
propagation in transverse magnetic field 4=19184
propagation velocity, spatial variation 2=16005
radiation in air at high altitudes 2=1180
radiation heat transfer meas. at supersatellite
speeds 4=14260
radiation intensity, before shock-wave emergence 3=21480
radiation-magneto-gas dynamics 1=16543
with radiation, structure 4=29688
radiation-resisted shocks, analytic soln. 3=1761
radiation-resisted, structure predictions 3=18894
radiative processes 0=10728
radio emission from plasma shock waves 2=20137
rarefied gas, hypersonic flow, compressible viscous
layer 2=2743
in rarefied gases, thickness, by two-fluid model 2=2751
in real gas dynamics, theory 4=2767
rear gas state calc. 4=16170
re-entering rocket, shock layer, electron density 2=2755
reflected, density measurements 1=8151
reflected, end-wall heat-transfer effects, on
trajectory 4=29696
reflected-shock technique for fast chem. reactions 0=16377
reflection, at Mach 13, end-plate
effect 4=29701
reflection, oblique, calc. 4=2765
reflection in perfectly conducting gas 1=19010
reflection and refraction 0=986, 6872
reflection, of strong point-source blast waves 4=29690
reflection, at 2-media interface, oblique incidence 0=8743
refraction, at gas interface 0=12456
use in refractive index meas. 1=16065
use in refractive index meas. 1=18577
in relativistic fluid 4=5279
in relativistic magnetohydrodynamics 1=19013
relativistic, strong, density compression ratio 0=16771
relativistic theory 0=19277
relaxation phenomena in gases, shock tube method 2=15649
in relaxing gas, unsteady propagation 1=18454
in relaxing media, propag. 2=21943
resonator on shock platform 3=14247
review 0=2202
review of importance in magnetohydrodynamics 4=2766
review, theory 3=18892

Shock waves—contd

rocket explosion, study of upper atmosphere 1=20879
 in rubber beams 1=1780
 sand, impact cratering with bullets, model 1=18335
 seawater, spherical explosion, implosive phase 2=9306
 self-similar motion of ultrarelativistic gas 1=6875
 self-similar motion of ultra-relativistic gas 1=10528
 semi-infinite elastic solid, stress field produced by
 bomb blast at surface 0=19279
 shape and parameters, by explosion, in non-uniform
 medium 3=21485
 shock front discontinuities, theory 2=19594
 shock front formation in materials 1=168
 shock front structure and reflectivity in 9 gases 1=167
 shock front thickness meas. 0=16774
 shock surface rel. to streamlines 1=15936
 shock tube, AERE, 8 x 2 in., design, instrumentation
 and performance 2=19602
 shock-tube boundary layers, turbulence
 transition 2=9302
 shock-tube bursting, rel. to impulses, erosion, tube
 material, pressure 2=23782
 shock tube, e.m., for low attenuation 2=17498
 shock tube, electronically-driven, magnetically-
 insulated 1=6890
 shock-tube end-plate heat gauge records 2=21934
 shock-tube flows, testing time and contact-zone
 phenomena 2=1187
 shock tube with integrated-schlieren instrumentation,
 A, He and CO₂ 2=7244
 shock tube, ionization causing resistance-gauge
 shorting 0=2274
 shock tube, mag. annular, current distrib. 2=13362
 shock-tube, magnetically driven, electron and ion
 temps. 2=9308
 shock tube, 17 in. diameter, for rarefied gas
 dynamics 2=15632
 shock tube spectroscopy, hydrodynamic aspects 1=170
 shock tube technique for det. O₂ dissociation
 rates 1=4926
 shock tube technique for det. O₂ vibration
 relaxation 1=4925
 shock tubes, applications 2=19603
 shock tubes, book 1=18459
 shock tubes, design and operation, review 2=19604
 shock tubes, with diaphragm near divergent nozzle,
 wave diagrams 2=2760
 shock tubes, effect of boundary-layer growth of
 reflection 2=1188
 shock tubes, electrical, time for ion heating, calc. 1=10540
 shock tubes, gas cond. and boundary layer thickness
 meas. freq. modulation circuit 2=13521
 shock tubes, gas dynamic processes, investigation 2=9309
 shock tubes, heat transfer, thermometer meas. 2=5049
 shock tubes, ionization, origin 1=18460
 shock tubes, microwave technique appl. to
 ionization 3=1934
 shock-tunnel driver, equil.-interface technique 2=15631
 small-intensity, existence, in ordinary and m.h.d.
 systems 4=267
 smoothing by radiative transfer, mag. field
 effect 4=5285
 solar chromospheric, rel. to energy balance 2=979
 solar corona and chromosphere propagation 2=2537
 solar corona, rel. to temperature 2=13131
 in solar flares, rel. to cosmic ray generation 1=18089
 in solid bodies, oblique collision, irregular
 conditions 2=2759
 in solid bodies, oblique collision, irregular
 conditions 3=1756
 solid, opaque, shock front position meas. 4=27253
 solids, anelastic, review 3=21477
 solids, initiated by high explosives or impacts 0=14729
 in solids, interatomic, focusing 2=6400
 in solids and liquids, compressibility data from X-ray
 study 2=12847
 solids, mechanical response to extreme e.m.
 radiation 2=11398
 sonic-boom ground-pressure signatures 4=4778
 spark channel decay after current passage 3=9748
 from spark-channel expansion 0=5285
 spark channel heating 3=21740
 from spark channels, in liquids 0=15002

Shock waves—contd

spark discharges, strong, velocity theory 1=18787
 in spark discharges in T shaped tubes 1=18786
 spectra, effect of shock-machine loading 3=201
 spectroscopic investigation of gas behind wave 0=19212-3
 spectroscopic temp. meas., in shock tube 0=12455
 spectroscopy, temp., relax., line shape, transition 4=2831
 speed meas. by streak camera 4=24303
 speed of propagation, luminous fronts in shock
 tubes 2=7245
 sphere in hypersonic flow, shock layer about stagnation
 region, viscous flow 0=14671
 spherical BaTiO₃ pressure transducer, for meas. in
 air 0=130
 spherical blast, in free space, similarity soln. 0=2204
 from spherical cavities in materials strained
 beyond the elastic limit 3=7279
 spherically symmetrical, in general relativity 4=5042
 stability, hydrodynamic, of detonation waves 2=11403
 stability of ripples in plane front 4=5292-3
 stability of step shocks 3=1760
 stable and transient, in solid cast explosives 0=3584
 star interview, due to explosion, energy
 transfer 4=13895
 in stars, front-to-back ratios 3=23690
 stars, loss of mass 2=2539
 stars, red giant type 1=18451
 stationary detonation zones, in toroidal tubes 0=6398
 in stationary magnetogas flows, 1-dimens. and quasi-
 1 dimens. 0=19913
 stationary strong waves, new approach 1=11772
 stellar atmosphere, inhomogeneous 3=3602
 stellar atmosphere, mechanical decay 2=9093
 in stellar atmosphere, radiative cooling 2=4813
 in stellar atmospheres 2=2544, 11097
 stellar atmospheres, dissipation theory 3=9235
 Stellar atmospheres, shock wave decay 1=1654
 stellar atmospheres, stationary wave propag. 3=5263
 stellar chromosphere heating 0=18858
 in stellar envelopes 0=18856
 stellar explosions, rel. to interior 2=17288
 in stellar interior, calc. method 2=21722
 stellar interiors, propag., computer eval. 2=15369
 in stellar interiors, spherical wave propagation 1=18455
 stiffening and freezing-in, for elec. discharge in
 liquid 4=5287
 striations, as plasma-acoustic waves 3=19211
 strong pressure wave amplitude meas., piezophotographic
 method 4=24302
 structure, bimodal model 0=10729
 structure, Boltzmann equation 0=16770
 structure, kinetic theory solutions 4=27248
 structure, low-intensity waves, in relativistic
 hydrodynamics 0=10732
 structure, plane, steady in H plasma 0=17021
 structure in relaxing diatomic gas 2=2754
 structure, in simple discrete velocity gas 4=29693
 subsonic flow, with normal shock wave at near-critical
 Mach number 0=19185
 successive waves 1=12913
 sun, corona, heating theory, mag. field effect 4=13936
 in supernovae, cosmic-ray production 0=17437
 from supersonic flight, noise prodn. 3=14245
 supersonic flow past delta wing 3=162
 supersonic turbulence, theory, review 4=8308
 T-tube, flow behind shockfront 4=18831
 TNT explosion, air vel. in blast waves 4=24308
 tail, in supersonic flight 4=29659
 temp. meas. in the reflected wave region using
 OH²Σ → ²Π band 4=2770
 temp. meas., by spectrum-line reversal 0=8744-14732
 temp. meas., behind wave, using Na D-lines 0=10727
 temp. behind wave 0=973
 temperature behind front, third-order eqn. 4=11289
 temperature of boundary, with thin metal films 2=7242
 for temperature meas., arcs, C 3=19225
 temperature meas. by spectrum-line reversal 1=15943
 temperature meas. by spectral-line reversal 3=14246
 temperature meas., OH rot. 4=2771
 temperature of plasma, X-band meas. 2=7243
 temperature variation behind attenuating waves, theory
 and expt. 4=18344

Shock waves—contd

termination of supersonic zone in transonic flow 1=6886
 in thunder, force calc., on hydrodynamic model 1=20866
 transfer equation, collision integral 4=2764
 transverse mag.-field effects 2=7180
 triggering of combustion in liquids 1=4500
 triple interaction calc. for White's exptl. composition 4=24306
 trotyl, cast, velocities and effects 0=16776
 tube diaphragm, bursting by blades 2=1186
 tube discontinuity, gas behind, impurity ionization meas. 4=11791
 tube experiments involving phase changes 2=15633
 tube narrowing and grid effects, 1-dimens., theory 0=5085
 tubes, effect of orifice plates, theory 2=11407
 tubes, with electron driver gas 1=2785
 tubes, low-density, in chemical kinetics 1=2783
 tubes, wave diagrams, for diaphragm near divergent nozzle 2=2760
 two-dimensional flow, numerical method 2=11401
 two-fluid model 1=11775
 two-fluid model, Boltzmann eqns., solution 2=9303
 two-wave shock structures in polycrystalline ferroelectrics 1=11778
 two-wave structure in ferroelectric ceramics 2=14641
 u.v. radiation analysis 3=7274
 from underwater exploded charges, energy per unit-area spectrum 4=23720
 from underwater explosion, refraction by velocity gradient 1=6889
 underwater, reflection from overlying ice layer 4=15864
 unsteady, flows behind, existence and uniqueness 2=11405
 in upper atmosphere, vertical, by nuclear explosions 2=6933
 velo. meas., plasma discharge between coaxial cylinders 3=14252
 velocity in elec. arc 3=16920
 velocity, meas. by multiple flash gas 3=7275
 velocity, meas. by photoelec. method 4=29698
 velocity meas. with photomultipliers 4=2772
 vibrational relax., calc. 3=23969
 visible precursor radiation in e.m. tubes 1=12917
 water, detonation pressure and eqn. of state 3=1751
 in water, electric-spark induced 1=5430
 waveform, derivation from hydrodynamics eqns. 2=9248
 wavefronts in He shock tube 2=5048
 wave-fronts in mag. field, effect of elec. cond. anisotropy 0=9178
 weak waves, nonlinear reflection 1=8155
 at wedge, detachment, Hugoniot curve 1=5293
 at wedge, shock-front attachment conditions 0=9179
 A, due to exploding Cu wire, mechanisms 2=19596
 A, electromagnetically driven 2=19601
 A, electron diffusion 0=14731
 A, flow rel. to radiation absorption 2=9307
 A, H β line profile behind wave 0=15659
 A, liquid, shock Hugoniot 0=8653
 A, propagation of successive waves 2=9304
 A, shock front thickness 0=16774
 A, in shock tube (M = 8-23), mag. field effects 1=1970
 A, thickness of front at high temp. 2=2753
 A-He mixtures, structure of weak shock fronts, diffusion effects 1=8154
 A-N mixtures containing Cr(CO) $_6$, Cr emission 1=13933
 in Al, nonhydrodynamic attenuation 3=21490
 Al, pressure meas. using high-press. transducer 4=2515
 Al, propagation 3=11856
 Ar, bimodal model, rel. to intermol. forces 3=1755
 in Ar, cylindrical propagation 4=14264
 Ar, normal and oblique, equilb. ionization calcs. 3=23973
 Ar-H $_2$, meas. of H atom polarizability 4=9628
 in Ar plasma pinch 4=11649
 Ar plasma, thermal transport studies 4=16466
 Ar, pressure driven, precursors ahead 4=18340
 Ar, structure meas. by microwave techniques 3=9545
 Ar, structure, Navier-Stokes calc. 4=5283
 Ar, structure of fronts, optical refl. meas. 4=5282
 Ar, temp. calc. 4=18327
 in Ar, temperatures, photomultiplier meas. 4=18326
 Ar, thermodynamic state, spectral meas. 4=27527

Shock waves—contd

Bi, compression by projectiles from helium gun 1=9090
 C $_2$ H $_2$ and O $_2$ explosions, microwave obs. 4=27522
 in CO, transition Reynolds numbers 1=11781
 CO $_2$, Mach 2.5-5.5, vibr. relaxation freqs. 4=5291
 CO $_2$ vibr. modes var. with Mach number 4=18339
 in CO + N $_2$ mixture, for CN violet band obs. 4=15330
 Cu, explosive loaded profiles, mech. prop. meas. 4=28939
 D, ionization fronts, R-type 3=7277
 D, with longit. mag. field 1=6890
 D, moving magnetic field behind shock front 0=1196
 D, l precursor effect, microwave study 4=18347
 D $_2$, in conical shock tubes 1=4372
 D $_2$, spherically symmetrical convergent compression 1=15937
 Fe, compression by projectiles from helium gun 1=9090
 H, atomic, structure of shock front 3=21491
 H-driven, pressure var., deviation from theory 4=8311
 H, propagation of successive waves 2=9304
 H $_2$ detonation, density behind shock 4=2776
 in H $_2$, from spark discharge 4=266
 H $_2$, magnetically driven, dissociation behind 4=18348
 H $_2$, thermal dissociation rate meas. 1=19671
 H $_2$ -O $_2$ reaction, OH chemiluminescence 4=13705
 H, bimodal model, rel. to intermol. forces 3=1755
 He, e.m. driven, electron density and temp. 3=1752
 He, e.m. driven, of Mach number 10-100 3=7276
 He, equil., specific heats behind front 3=16699
 He, equilibrium state behind 3=16698
 He jump conditions, effect of ionization 4=16174
 He, magnetically driven, cylindrical, current density meas. 4=18828
 He plasma 1=291
 He plasma, temp. and density relations 4=5611
 He, pressure discontinuity in front of luminous front 4=5286
 He, self-ionizing, 50 μ Hg, structure 4=18830
 in He, structure, He I and II spectra 1=2782
 N $_2$ and air, Kramer's and line radiation 4=19943
 N $_2$ and air, temperature behind front 0=102
 N $_2$, attenuating shock waves, temp. variation, theory and expt. 4=18344
 N $_2$ (1+) band system excitation mechanism, shock-heated 4=25656
 in N $_2$, props. behind incident and reflected waves 3=21493
 N $_2$, temp. 0=14732
 N $_2$, structure of fronts, optical refl. meas. 4=5282
 N $_2$ H $_4$, thermal decomposition 4=23650
 NH $_3$, thermal decomposition 4=23651
 NO, shock tube study of vibrational relaxation 1=5997
 N $_2$ O decomposition in reflected waves 2=4529
 NO $_2$ Cl thermal decomposition in A and O $_2$ 2=15133
 NaCl 0=20730
 O $_2$, attenuating shock waves, temp. variation, theory and expt. 4=18344
 in O $_2$, props. behind incident and reflected waves 3=21493
 O $_2$, shock front structure at high Mach numbers 4=18341
 O $_2$, temp. 0=14732
 O $_2$ -H $_2$ mixtures, optical refractivity of OH, interferometric meas. 1=2788
 W, parameters rel. to initial densities 2=13360
 W, parameters rel. to initial densities 3=5487
 Xe flashtubes, rel. to tube deterioration 4=8662
 Xe, shock-heating 1=169

effects
 acetone, double refraction 3=7205
 acetylene-oxygen reactions, vac. u.v. emission 2=12963
 for acoustic transducer transient response meas., by analysis of response 4=5328
 acoustic wave energy in moving media 4=280
 aerosol coagulation, oil mist, periodic waves 3=23555
 air, breakdown, Paschen curves 4=2960
 air, dissociation, calc. of reaction profiles 0=1957
 air, electrical conductivity 0=5055
 air, equilibrium flow, plasma composition data 2=3032
 air, Hall e.m.f. meas. 2=7563
 air, ionization 3=7431
 air, ionization, elec. cond. 1=16276
 air, ionization rate, theory 3=12074
 air, ionization reactions rel. to electron density 2=3004

Shock waves—contd

effects—contd

- air, ionization in shock tube for elec. cond.
meas. 2=13542
air mols. (binary mixture of N_2 and O_2), relax. of vibr.
energy 4=30438
air, NO band emission near 1μ 3=3836
air, non-equil. region, radiation 2=2757
air plasma production 1=11935
air, reflection, e.m. waves, in waveguide 4=30048
alkali halides, compressibility, high-press. 3=18179
anthracene, excitation of CN, C_2 and CH spectra 1=2310
argon, ionization and diffusion 1=11780
benzene, solid, excitation of CN, C_2 and CH spectra 1=2310
booms from aircraft in manoeuvres 3=16693
breakup of liq. drops 2=2693
butene-2, cis-trans isomerization in shock tube 3=16160
charged particle accel., energy spectra 3=21087
chemical reactions in magnetohydrodynamic
shocks 1=16521
collision-free plasma, thermalized plasma 2=9578
compressibility meas. 4=7388
continuum i. r. radiation from air and N_2 4=2732
determination of dissociation rates 1=10295
detonation initiation of homog. explosives 3=11348
detonation of $2H_2 + O_2 + 2CO$ 1=7908
detonation in water, luminosity 3=21379
diamond formation in graphite 2=4360
diatomic gases, transl.-vibr. energy transfer 0=6832
discharge, impulsive, shock-controlled
spread 4=21478
dissociation behind waves, rates for deuterium 2=12345
drops, breakup by air blasts 3=23859
dust dispersion, initial stages 3=9543
elec. cond. dielectrics 0=6073
elec. current generation in cond. gases 1=166
electrical breakdown in plasma discharge tube 2=9555
expansion shock interaction in gases 4=27249
exploding wires, hollow, X-ray emissions meas. 4=16177
ferrites, phase transformation 2=15057
flow of polyatomic gas 3=21424
gas, contact/shock fronts coincidence, plasma
luminescence 4=24305
gas dissociation, heat transfer 1=6878
gas ionization, measurement 1=9524
gas mixture, nonequil. dissociation 2=14336
gas relaxation meas. by recompression near
obstacle 4=14212
gaseous plasma, visible light emission 3=21488
gases, di- and polyatomic, relaxation time det. 1=6905
gases, physical study, review 0=3564
glass breakage by sonic booms 3=16692
glass and certain plastics, rendered opaque, obs. 1=20388
granular pressings, interstitial Ar, methane, temp.,
calc. 4=2774
heating and melting, of solid walls 0=6864
heating, use in possible controlled fusion devices 0=9724
hydrazine, thermal decomp. in shock tube 4=4692
hydrazoic acid, luminescence 3=12876
ignition of combustible mixtures 1=16155
infrared radiation 1=15944
interaction with bubble 2=13361
interaction with turbulent boundary layers 2=15630
interactions, two waves in same direction 3=14250
ionization, dissociation and internal energy
relax. 2=13358
ionization equations, oblique fields 4=2769
ionization, meas. by microwave method 4=24663
ionization in oxidation of acetylene 2=23959
ionization profiles of precursor (erratum) 4=5284
ionization, thermal coeff., meas. in shock tube 2=1382
ionizing fronts, hydromag., characteristics 4=449
ionizing mechanism, in transverse mag. field 4=29694
krypton, state behind shock wave, spectroscopic
study 2=63
laminar boundary layer behind strong shock 2=1182
in liquid explosives, initiation of explosion 1=7910
luminous phenomena in magnetically driven shock
tubes 1=10539
magnetically driven shock tube, optical
study 1=2784
melting 3=24108
methane, in granular pressings, temp., calc. 4=2774
methane-oxygen reactions, vac. u.v. emission 2=12963

Shock waves—contd

effects—contd

- methanol, double refraction 3=7205
molecular dissociation and recombination behind shock
wave 3=11857
molecular dissociation behind shocks 3=22604
molecules, shock tube precursor i. r. excitation 4=28160
n-heptane, double refraction 3=7205
naphthalene, excitation of CN, C_2 and CH
spectra 1=2310
nuclear fusion temps. generation by impact of small
solid particles 4=18328
plasma, crossing mag. field, charge separation
effects 4=19026
plasma dynamics, in l.p. discharges in H and air 0=16978
in plasma, elec. impedance of immersed
electrodes 3=21760
plasma, moving, nonlinear mag. interact. 3=9773
plasma prodn. with high electron density 3=12181
plasma, Kr, coupling of microwaves 3=16943-4
plasma, low density, compress. and heating,
models 4=27523
plasma, mag. flux transport 4=29918
plasma, neutral, blast wave of electron gas 4=27526
plasma pinch, hard-core, compression 4=18949
plasma prod., by e.m., non-reproducible 4=16476
plasma, struct. without mag. field, ion and electron
gas model 4=27525
plasma, vel. radial var. in cylindrical geometry 4=24647
plastic flow in metals on explosive loading 3=1224
powdered solids, thermal excit., spectroscopy 3=24018
precursor elec. effects, elec. diffusion mechanism 2=15628
quartz, compression, crystals and fused 2=6727
relaxing medium, front discontinuities 4=14281
rockets, hypersonic, ionization 2=4878
satellite, re-entry, ionized layer, r.f. interference 2=4883
shell, elastic, cylindrical, transient response 3=7260
shock tube determ. of dissociation rates of H_2 2=1183
shock tube meas. of $OH^+ \Sigma \rightarrow {}^2\Pi$ transitions 2=3754
shock tube, single pulse 3=16160
shock tube study of O atom recombination 3=13595
shock tube study of O_2 -A rates of dissociation and
vibrational relaxation 2=23005
silica, vitreous, crystallization 0=3259
slicks on Lake Huron 3=7187
in solid explosives, initiation of explosion 1=7911
spalling of iron and steel 2=12865, 14904
spectra excitation, review 3=11912
steel, plastic deform. and $\alpha \rightarrow \gamma$ phase
transformation 2=2322
steel plates, cratering at high impact speeds 0=8741
stellar atmospheres, cooling behind wave-front 0=18978
Supersonic flow, stationary, non-perfect gases, due to
shock waves, calc. 4=18229
surface deformation propagation, in shock-excited
body 0=19258
suspension prep. for electron microscopy 2=21597
triggering of combustion in liquids 1=10621
2, 2, 4 trimethylpentane, double refraction 3=7205
underground cavities 3=16194
vibrations of elastic cylindrical shell 3=18881
water, double refraction 3=7205
A, insulating-boundary thickness behind
shocks 3=24456
A, plasma, spectroscopic study 2=11640
Al, attenuation and thickness of surface scale
produced 4=4456
Al and AlO spectrum, $B^2\Pi-A^2\Sigma$ band 4=22346
Al, equations of state measurement by shock wave
compression 1=11167
Ar, in granular pressings, temp., calc. 4=2774
in Ar, liquid, phase transitions 4=15388
Ar, spectrum, continuous, visible 4=29678
BaO powder, absorption studies, new band system 2=696
CN formation and reaction kinetics 2=6879
 C_2N_2 dissociation 2=12349
CO, gas, radiation spectrum 3=11835
CO, vibrational relaxation meas. 3=7243
CO, vibrational relaxation in shock tube 1=4375
CO₂, dissociation rate in shock tube 3=15389
CO₂ gas, radiation spectrum 3=11835
CO₂, vibrational relaxation and dissociation 0=5893
CO₂, vibrational relaxation meas. 2=19622

Shock waves—contd**effects—contd**

- CO₂, vibrations and dissociation at 2000° to 4000° K 4=12529
 CS₂, decomp. kinetics, shock-tube study 4=22428
 Cl₂ dissociation 2=10974
 Cl₂, dissociation 3=25147
 Cl₂, thermal dissoc. rate det. in shock tube 4=4691
 Cr I, excitation in Ne-Cr(CO)_n 0=484
 Cs vapour, ionization processes study 3=1930
 Cs in Ar, ionization behind wave, relax. 4=21228
 Cu, disintegration, determ. of ultimate yield strength 2=6746
 Cu, residual temps. 3=21597
 Cu₃Au, on resistivity, energy, micro-hardness and struct. 4=26508
 Fe, Armco, spall production 1=7830
 Fe, hardening and phase transform. at 130 kbar 2=23846
 Fe, phase transformations, temp. depend. 2=6821
 α-Fe, screw dislocations 3=4872
 H, plasma prod. in SUPPER II 4=27521
 H plasma, temp. and density 0=19689
 H₂, excitation of dark discharges 1=16278
 H and D dissociation rate meas. 2=14333
 He, 5876 Å emission, anomalous precursor 0=483
 He, high ion density and temperature production 1=18764
 He, plasma, spectroscopic study 2=11640
 He plasma, temp. and density 0=19689
 HN₃, dissociation 1=6057
 I₂, diatomic bond destruction 0=15767
 Kr, plasma, coupling of microwaves 3=16943-4
 Kr, spectrum, continuous, visible 4=29678
 Li, 4603 Å line, Stark broadening by A ions 2=1960
 N⁻ spectrum 4=21455
 N₂⁺, first negative band intensity behind shock waves rel. to pres. 3=4756
 N₂ gas, radiation spectrum 3=11835
 N₂, non-equilibrium radiation, recombination rate 2=7566
 N₂, non-equilibrium region, radiation 2=2757
 N₂ + H₂ systems, refl. wave study by NH radical spectrum 4=17320
 NO₂, with Ar, thermal emission of mol. 3=726
 NO₂, decomposition 4=29216
 NO₂, emission and dissociation 4=3919
 N₂O, thermal decomposition, 1500-2500°K 4=15834
 N₂, O₂, dissociation and rate of vibrational relaxation 2=19597
 NaCl, luminescence, due to heating 4=22923
 Nd—glass laser, pumping 4=8970
 O₂, in air, excitation and dissociation 1=2778
 O₂, dissociation and excitation of oscillations 2=12350, 14334
 O₂, dissociation, heat transfer 1=6878
 O₂, and intramol. oscill. relax., temp. var., and intermol. repulsion 3=12881
 O₂ gas, radiation spectrum 3=11835
 O₂, non-equilib. region, radiation 2=2757
 O₂, propag., and intramol. oscill. relax., temp. var., and intermol. repulsion 3=12881
 O₂, shock-heated, temp. meas. by spectral method 2=2917
 O₂-C₂H₂, O₂-C₂N₂, detonation, C₂, CN radical temps. 4=7757
 S, transition to metallic state by fusion 0=15806
 Se, grey, rel. to elec. cond. 3=830
 SO₂ in Ar, thermochemical radiation 4=26747
 TiCl₄-Ar mixtures, neutral Ti emission behind waves 3=11836
 Xe, early ionization processes 4=5554
 Xe, spectrum, continuous, visible 4=29678
 Xe₂, u.v. and visible emission 0=15728-9
 Zn compounds, powdered, luminosity studies, emission band 2=696

 absorption edge, intrinsic, heavy doping effect 3=15688
 absorption of light, effect of strong elec. field 1=1153
 absorption spectrum, i.r., of free carriers 1=19989
 absorption spectrum, line widths of B-doped material 2=23556
 absorption spectrum, phonon effects 2=14689
 absorption spectra, 50-2500 μ 0=10035
 adsorption of H, i.r. internal reflection study 3=18397
 adsorption of O, I, H, P, electron diffraction study 4=20824
 adsorption on, O₂ 0=12116
 adsorption of O₂, e.s.r. obs. 4=26723
 adsorption of O₂, sticking probab., regeneration of clean surface 1=11597
 adsorption of vapour on etched crystal 4=26722
 α-particle range, 4.5 MeV 0=9446
 anisotropic solution, light figures study 3=13410
 anodic dissolution 2=857
 anodization, prep. of P-doped anodic oxide films for device fabrication 4=26713
 antireflection coatings on 2=98
 anti-Schottky defects 3=12963
 atoms, electron scatt., Thomas-Fermi approx. 1=19605
 atom, p² config., electronic g factor meas. 4=15278
 atom, Si I spectrum in Pbs region 4=28136
 atomic spectra Si X, transition probab., permitted and forbidden lines 2=14205
 atoms, spectral, isotope shift 2=6097
 atomic weight and density meas. 4=27595
 band structure, electron, by photoelectric emission 3=6491
 band-structure, tight-binding approx. 2=3868
 bicrystals growth, Dash pedestal method 3=11235
 bremsstrahlung enhancement by single crystal on passing 575 MeV electrons 0=11137
 bremsstrahlung prod. in, interference effect 2=7846
 bremsstrahlung prod. at 1 GeV, orientation effect 0=12899
 bremsstrahlung spectrum, isochromat structure 3=8611
 Brillouin zone, selection rules connecting different points 1=14217
 capacitance and barrier layer, in contact with electrolyte 0=13649
 carbon-doped, optical absorption 1=2440
 cleaved surfaces, structural props. 3=23383
 compacted, ionization expansion in radiation 4=6889
 compressibility, quantum defect model, exchange correl. 4=28966
 compressibility, rel. to temp. 3=18178
 conductivity, elec., meas., 4 probe, for slices 4=10064
 contact prod. by sparking 4=12951
 contact resistance, two crystals 3=10796
 crow track formation by mechanical force on crystal wafer 4=28978
 crystals, anomalous transmission of X-rays 3=13185
 crystal boundary study, between etched and ground 1=14959
 crystal defects, X-ray study, oscillating film method 4=1451
 crystals, characteristic oscillation frequencies 2=18517, 20919
 crystals, containing Al, precipitation 0=20826
 crystal dislocations, effect of zone refining technique 4=29060
 crystal dislocations, electron microscope exam. 3=22784
 crystals, dislocation-free, X-ray fringe systems rel. to theory 4=23378
 crystal dislocation loops, on bending, screw with super jogs 4=12761
 crystal dislocation networks due to diffusion 4=17433
 crystal dislocations, prod. and obs. 4=30564
 crystal electron band gap, temp. var., as for Au-Si surface barrier height 4=15550
 crystal electrons, cond., density, at nucleus, from Overhauser effect and spin relax. 4=20244
 crystal, electron diffraction pattern, unknown streak 3=1287
 crystal etching and growth bands, non-uniform impurities, n-type 3=20782
 crystals, etching, thermal 3=16030
 crystal faults rel. to 750 keV proton exposure at 850°-900°C 2=23147
 crystal faults, by X-ray method, diagram evaluation 2=14426

Silicon—contd

- crystals by floating zone technique, using arc image furnace 1=2529
 crystal growth 0=12006
 crystal growth, without crucible 1=7849
 crystal growth by Czochralski method 2=2352
 crystal growth, epitaxial 3=18046
 crystal growth, epitaxial 4=17796
 crystal growth, epitaxy 2=14965
 crystal growth, epitaxial, from vapour, effect of elec. field 4=10488
 crystal growth, facet formation 3=6823
 crystal growth, floating zone 3=18276
 crystal growth, floating zone, induction vacuum apparatus without quartz 3=25677
 crystal growth front distortions due to impurity 2=4379
 crystal growth from gaseous phase, using 2nd component 4=10471
 crystal growth, in H_2 , A and vacuo, Czochralsky method 1=4028
 crystal growth, high purity, floating-zone method 0=16268
 crystal growth, irregular, due to supercooling 4=4547
 crystal growth, P-doped, Czochralski method, solute striations 4=4530
 crystal growth, by $SiHCl_3$ reduction 3=18275
 crystal growth, separated from gas phase, atomic significance 3=18268
 crystal growth, single, dislocation free, by $SiCl_4$ dislocs. by H 4=4560
 crystal growth, temp. distrib. calc. 2=14955
 crystals, Hall effect meas. of radiation damage and annealing 4=15508
 crystal lattice optical and acoustic oscill. frequs. 293°K 3=15419
 crystal lattice—spin relax., acceptors, calc. 4=12617
 crystals, liquid—solid interface shape 0=6326
 crystals, neutron diffraction spin—orbit interaction 3=18294
 crystal perfection, studies by X-ray intensities 4=22593
 crystalline perfection, X-ray investig. 4=4056
 crystal phase transformations, rel. to pressure 3=18228
 crystal potential and energy bands, self-consistent calc. 0=9970
 crystals, quasi-particle dispersion laws 2=18508, 23025
 crystal, solution forms 2=2343
 crystal stacking fault dislocation loop origin in epitaxial growth 4=6859
 crystal stacking fault dislocation loop origin in epitaxial growth 4=6860
 crystals, stacking faults, X-ray topographic obs. 4=12773
 crystal stacking faults, extrinsic and intrinsic, epitaxial (110) 4=1500
 crystal stacking fault obs., by interference contrast microscopy, epitaxial 4=20287
 crystals, stressed, X-ray diffr. intensities 2=21503
 crystal structure, dense forms, high pressure treatment 4=23471
 crystal zone melting, by electron beam 4=4554
 crystals, zone-melting by electron bombardment 4=15762
 cyclotron resonance 0=6037, 7875
 cyclotron resonance over wide temp. range 1=14238
 cyclotron resonance under uniaxial strain 3=8414-15
 Debye—Waller factor interpretation 4=3982
 defects, produced by neutron irradi., size of damaged regions 0=2835
 density, effect of interstitial Li 1=19767
 detector, nuclear particles, reactions for 14 MeV neutrons 1=19495
 dichroism, mag. field effect, in n-type 4=1712
 diffused layer depth meas. 2=8384
 diffusion, accel., of impurities, on high-temp. 300—1000 keV proton irradi. 4=9995
 diffusion of As, 1100°-1350°C meas. 3=10689
 diffusion of Au, interstitial—substitutional equil. meas. 4=6878
 diffusion of B 1=14315
 diffusion of B, distrib. 3=22822
 diffusion of B and P, conc. -depend., calc. 4=9993
 diffusion of B, surface film removal 4=20384
 diffusion of B through oxide layer 3=10690
 diffusion of B through SiO_2 layer, anomalous 3=17789
 diffusion of B, 950-1375°C 0=6058

Silicon—contd

- diffusion of B, 1100° to 1300°C 4=20303
 diffusion coeff. of B 1=14301
 diffusion of C^{14} , 1070°-1400°C 2=3939
 diffusion of Ga and B, surface conc. 4=4077
 diffusion of Ga, internal elec. field effects due to Sb 4=28484
 diffusion of He 4=28490
 diffusion of interstitials, mechanism 2=12452
 diffusion of Li 0=4302
 diffusion of Li, at high temp., Li isotope effect 0=13560
 diffusion of Li, 25-125°C, by ion drift in n-p junction 0=13561
 diffusion of O in, calc. from internal friction 1=17560
 diffusion and configuration of O 4=28485
 diffusion of O_2 , donor production 0=1601
 diffusion of P along grain boundaries 1=11228
 diffusion of P, fast mechanism 3=2832
 diffused P distribution 2=18600, 21072
 diffused P distribution 3=2833
 diffusion of P_2O_5 from azeotrope with water 2=18602
 diffusion of P, P_3N_5 as diffusion source 4=22625
 diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194
 diffusion, in liquid cast Fe, by electrolysis 3=5431
 diffusion, rel. to proton irradi. 3=22825
 diffusion to thin layers, conc. profiles 2=23208
 diffusion of Zn, in elec. fields 3=17790
 diode, heat liberation in p^+ region in forward p^+-n-n^+ 4=20392
 dislocations, curved and festoon formation 0=13537
 dislocation density, and microhardness 2=21028
 dislocations, diffusion-induced 2=10397
 dislocations, direct obs. with white X-rays 4=25945
 dislocations, discrete stress field 2=23177
 dislocations, discrete stress field 3=6518
 dislocations, formed by vacancy disk collapse 0=20814
 dislocation generation and distribution due to solutes 1=14270
 dislocations, gold-induced climb 1=2390
 dislocation induction by boron doping 2=18583
 dislocations, interaction with vacancies 2=21032
 dislocations, interaction with vacancies 3=6517
 dislocation kink motion, rel. to internal friction 3=10663
 dislocation line observation by X-ray diffraction 1=15049
 dislocation loops, large, generation 4=1481
 dislocation obs. by heat treatment in different vapours 3=20180
 dislocations, prismatic, electron micrographs 2=6347
 dislocations prod. by diffusion of P 4=22590
 dislocations, props. and configuration by X-rays 4=22597
 dislocations, sessile 2=12431, 14441
 dislocations in single crystals 3=797
 dislocations in single crystals, behaviour under pulling, rotation and thermal shock 1=11207
 dislocations, study by etching 0=1580
 dislocations, surface, X-ray diffrn. study 1=17537
 dislocation velocity and density 2=21033
 dislocations in webs 4=12749
 dislocations, X-ray diffract. topography 0=1587
 dislocations, X-ray invest. 2=21574
 divacancy, nature and direct electron-beam production 2=3905
 doped, light transmission, 40 to 100 μm 4=10194
 doping, high local conc. effect in single crystals 4=28574
 double refraction and photoelastic const. 2=8483
 E-centre after electron irradi., e.p.r. and ENDOR 4=20309
 e. m. wave propag., TE_{01} , calc. for exp. decaying carrier density 4=28689
 e.s.r. of centres due to neutron irradi. 3=2849
 e.s.r. of Cr^0 and Mn^+ , rel. to electric dipole induction 4=1863
 e.s.r. of embedded V^{2+} and Fe^0 atom 3=20639
 e.s.r. in Fe-doped material 1=20216
 e.s.r. surface centres due to heat treatment 3=5045
 edge dislocations, climb induced by Au 3=17715
 effects of 100 kV H^+ and He ion bomb. 3=10708
 elastic constants, electronic effect 3=18162
 elastic constants and internal energy, irradiated by fast neutrons 1=9082
 elastic moduli rel. to hydrostatic press., 25.0° and -195.8°C 4=23202

Silicon—contd

- electrical characterization of epitaxial films using three-point probe method 4=28569
 electrochem. props. Si solutions in HF 0=10353
 electrode potential in solution 1=20744
 electrodes, saturation currents 1=20745
 electron absorption and range, 8-20 keV 0=15082
 electron beam penetration 0=19765-7
 electron beam penetration 1=6098
 electron beam, 2.8 MeV, energy loss, theory and expt. 1=18935
 electron cond. and valence levels, general strain effects 4=4020
 electron density, anisotropy, X-ray study 0=16309
 electron diffr., energy analysis of pattern 3=16058
 electron emission, effect of treatment in Cs vapour 0=19716
 electron emission, field, direct energy meas. 3=4176
 electron emission, field, energy distrib., strong p-type 3=12232
 electron emission, field, rel. to Fermi level 4=3021
 electron emission, field, tips 3=12231
 electron energy losses in very thin films 3=20154
 electron extinction distance meas. 4=7644
 electron irradi., absorpt. curve 2=8258
 electron irradi., lattice damage, directional distrib. 0=1608
 electron-nuclear double resonance of Fe⁵⁷ and Au¹⁹⁷ in, mag. moments det. 0=7458-9
 electron pair prod. in, by 1 GeV γ -rays, orientation depend. 0=7340
 electron scatt. at cleavage surfaces 3=4857
 electron scattering, on cleavage planes, Kikuchi lines and Bragg reflection 1=6094
 electron spin-lattice relaxation, in P-doped Si 0=4512
 electron states, optical absorpt., crystal structure band bonding, review 4=28413
 electronic complex 0=9890
 electropolishing technique 3=23501
 energy band structure, reflectance and photo-emission 3=4960
 energy bands, detailed calc., pseudopotential method 4=20247
 energy barrier, betw. surface states and bulk of crystal 0=6113
 enthalpy, meas., 1200-1900°K 2=6277
 epitaxial deposition on quartz, orient. depend. 4=4563
 epitaxial deposition, selective 2=21494
 epitaxial deposition technique 2=14966
 epitaxial films 2=19061
 epitaxial films, growth by H reduction of SiCl₄ 1=15013
 epitaxial films., partial dislocations 2=10396
 epitaxial films, thickness meas. by i.r. interference 3=1650
 epitaxial layer, Si-C contaminated, bonding props. 4=30883
 epitaxial layers, deposition conditions, depend. of dopant conc. 4=23356
 epitaxial layers, growth rate, effect on stacking-fault density 4=12771
 epitaxial, stacking faults 2=10404
 epitaxial, stacking faults structure, origin 3=10680
 epitaxy by vacuum evap. 2=21493
 etching, by A ion bombard. 0=1898
 etching, chemically, mechanism 0=18330
 etching, damage by ion bombardment 0=21172
 etching with HF-HNO₃ 2=8779
 etching, with HF-HNO₃-NC₂H₃O₂ 0=4600
 etching, jet method 0=6340
 evaporation, r.f. levitation technique 2=23914
 evaporation, in vacuo and film fabrication 3=20927
 exciton energy levels 0=11607
 Faraday rot. near band edge 2=23534
 field-effect meas. for cleaved surfaces of n-type single crystals 4=28573
 field emission 1=18908
 field emission 3=24332
 field-emitted electrons, energy distrib. 4=19081
 films, characteristic energy loss of 50 keV electrons 3=14661
 films, epitaxial, cond. elec., meas. methods 4=6989
 films, epitaxial, growth and defects 3=5091
 films, epitaxial, vacuum evap. 3=13424
 films, evap., optical props., 5000-8000 Å meas. 4=13056
 films, evap., prepn. 3=8926

Silicon—contd

- films, evaporation deposited, by electron beam heating 0=8284
 film growth free from stacking faults, by initial fast deposition 4=4659
 films, high photovoltage 4=22803
 films, with high photovoltage 4=22802
 films on Si substrates, stacking fault nucleation 4=20288
 films, single-crystal, electron diffr. streak patterns 2=23939
 film thickness meas. 2=17402
 films, thin single-crystal, prep. by cathode bombardment 2=841
 films, in vacuo, evaporation fabrication 3=20927
 fluctuations, electrical, var. with freq., temp. field 4=4166
 foils, electron scatt., energy diagram study 2=821
 fracture, single crystals, mechanism 3=23360
 fundamental absorption edge, effect of h.f. elec. field 1=19972
 fundamental absorption edge, effect of h.f. elec. field 2=4139
 fusion curve at high pressures 3=14417
 (γ , n) in solid, displacement radiation effect of recoils 4=10016

 γ -ray and neutron damage and annealing 4=15509
 gamma-rays, effects, temp., illum. depend., mechanism 3=25312
 gels, Si-base, high-temp. stability 3=21010
 growth of dislocation-free crystals 1=9115
 growth, epitaxial, from SiCl₄ 3=20797
 growth, epitaxial, stacking faults 3=805
 growth, "faceting" effect 4=2042
 growth, polycrystalline rods, without crucible 2=8790
 growth of single crystals on sapphire substrate 4=17795
 Grüneisen γ , temp. depend. calc. 3=10607
 Grüneisen's gamma, low temp. limit 2=8177
 hardness, micro, -200 to 1000°C, linear to exp. transition 4=13404
 heat capacity, meas., 1200-1900°K 2=6277
 heat treatment, resistivity, changes and other effects survey 3=15579
 heavily doped, reflectivity, heat treatment effect 4=7155
 high-purity, prep. from silane 2=7091
 i.r. absorption bands (1.8, 9-14 μ) rel. to neutron or electron irradi. 2=23570
 i.r. absorpt. lines when B-doped 4=4275
 i.r. absorption rel. to crushing and alkyl bonding 2=18843
 i.r. absorption edge, fine structure 1=6210
 i.r. absorption, effect of O on fine structure 0=20986
 i.r. absorption spectra of n and p crystals 3=935
 i.r. absorption spectrum, temp. depend. 2=10607
 i.r. birefringence, plastic deformation and work damage 0=1723
 i.r. emittance rel. to absorption processes, 323° to 473°K 3=10961
 i.r. filters 1=10580
 i.r. spectra, interpretation 1=1160
 imperfections, X-ray microscope exam 2=10370
 impurities, interaction with dislocations, theory 4=12738
 impurities, solid solubility max. rel. to distrib. 2=17054
 impurity diffusion 3=22824
 impurity distrib. meas. of diffused layers 4=26448
 impurity spin relaxation, via conduction electrons 0=10241
 interaction with vacancies in Al-10wt% Zn alloys, rel. to clustering 4=28994
 internal friction, semicond. and other props. 1=1303-4
 internal stress around dislocations, obs. 2=6725
 interstitial Fe⁰ and Fe⁺, paramagnetic resonance 1=20214-15
 interstitial impurities, solubility, theory 1=17506
 ion beam from h.f. source 3=24380
 ion bombarded, in glow discharge, P and B diffusion 3=22823
 ion bombardment doping, Mo masking 4=26059
 ions, Si⁺, lowest config., Hartree-Fock calc. 4=12377
 ions, Si³⁺, atomic orbitals and transition integrals calc. 2=10210
 irradiation effects, A-centre lattice vacancies, e.s.r. and i.r. absorption 1=3656-7

Silicon—contd

- irradiat., optical effects, defects and paramag. res. 4=28507
 isotope separation, $\text{Si}^{28,29,30}$, by thermal diffusion of SiH_4 , in column 3=25072
 isotopic analysis, by solid-source mass-spectrometry 0=17679
 Kapitza resistance meas. 3=12017
 Kikuchi pattern from Si wedge 4=23470
 lattice absorption bands from spectral emissivity 2=10582
 lattice absorption i.r. bands, shell model applic. 3=10927
 lattice absorption of light 3=928
 lattice const. and density, precision 1=1677-8
 lattice const. rel. to press., electronic band structure, elec., optical and defect props. 4=12895
 lattice defects induced by reactor irradiation 1=14347
 lattice defects induced by reactor irradiation 1=17593
 lattice defects, prod. by γ -rays from reactor shields 2=20992
 lattice defects, transmission electron microscopy 2=21043
 lattice displacements, proton induced 3=13023
 lattice distortions, "frozen" and "reversible" 2=16650
 lattice distortions, frozen and reversible?, in thin plates 3=10653
 lattice frequencies and specific heats 1=17399
 lattice parameter measurements, comparisons 1=15068
 lattice parameters, X-ray study, absorption correction 0=1919
 lattice perfection, by lattice-constant and density method 1=10258
 lattice scattering mobility, transition of temp. depend. 0=9957
 lattice thermal conductivity, analysis 4=6756
 lattice thermal conductivity, rel. to impurities 3=10610
 lattice vacancy, e.s.r. study 3=22734
 lattice vibrations 1=4964
 lattice vibration frequency, 293° and 580°K 3=25181
 lattice vibrations, group theory study 0=20737
 lattice vibrations, normal modes, θ -series calc. 3=4809
 layer structure in dislocation-free crystals, X-ray transmission study 1=11197
 layers, on Ti bases, secondary electron emission 1=4637
 layers, on Ti bases, secondary electron emission 1=10734
 layers, vapour grown, etch figures 3=804
 length changes at low temp. on electron irradi. 2=3967
 light absorption, by impurities, theory 0=6175, 13685
 light figures and crystal faces revealed by etching 1=20412
 lines in solar u.v. spectrum 3=8200
 liquid, density rel. to temp. and m. pt. 3=3793
 liquidus curves 0=19119
 luminescence of Si anode in electrolyte 2=4192
 magnetic props. calc., from X-ray meas. of electron density 4=7216
 mag. susceptibility of electrons and donors in n-types 3-300°K 0=10099
 magnetoresistance, anomalous, low temp. 4=6972
 mechanical props. and dislocations, -196 to 1380°K 3=5064
 melt, diffusion of impurities 3=18803
 melt, diffusion of impurities 3=18804-5
 melting, acquisition of metallic props. 0=11552
 mesic atom, μ^- -meson lifetime 1=17300
 microhardness anisotropy 4=10401
 microhardness anisotropy 4=30778
 microhardness, and dislocation density 2=21028
 microhardness, rel. to internal photoeffect 4=4463
 microstrains at B impurities, in dislocation-free crystals 3=15486
 misorientation during Czochralski growth method 4=2034
 monocrystals, dendritic structure, rel. to growing conditions 2=803
 monocrystals, dislocations and microhardness 1=3675
 monocrystalline layer growth on Si 1=15014
 monocrystalline, range of Xe^{135} ions, 5-80 keV 4=22652
 Mössbauer effect, of Fe^{57} , diff. between n and p type, and electron config. 4=15404
 Mössbauer effect, Fe^{57} , isomer shift 2=20907
 neutron bombardment tracks, obs. by electron microscopy 3=15524
 neutron irradi., single phonon absorpt. band 4=9836

Silicon—contd

- non-crystalline excrescences, after air-heating, 1100°-1200°C, 8 weeks 2=23907
 nuclear orientation of Sb^{123} in, electron and nuclear relaxation 1=12173
 nuclear reactions due to neutrons, identification 2=18339
 (111) face epitaxial layers, dislocations 4=2039
 optical absorpt. after heat treatment 2=8539
 optical absorption by defect vibrations 3=10581
 optical consts. in extreme u.v. 2=18787
 optical consts. at less than crit. wavelength 4=22844
 optical consts., 1-10 eV 0=18116
 optical, elastic and piezoelectric props. 1=899
 optical films, structure and reflecting power 0=19423, 20975
 as optical material, for i.r. 0=14809
 optical reflectance for 1.5-25 eV photons 3=8584
 orientation, rapid diffractometer determ. 2=19036
 overgrowths, topography and growth mechanism 4=23357
 oxidation, effect of electric field 2=19143
 oxidation rates by boiling water 2=21583
 oxidation and reduction at 600-1000°C 2=15141
 oxidation, thermal 2=21584
 oxidized surface layers, n-type conversion 2=21164
 oxygen site in doped crystal 1=7578
 p-n junctions, avalanche breakdown, microplasma phenomena 2=21159
 paramagnetic centre due to electron irradi. 3=6750
 paramagnetic and cyclotron resonance 4=23042
 paramagnetic relaxation in small particles 4=26374
 paramag. resonance absorption from acceptors in stressed p-type 1=1266
 paramagnetic resonance, electric field effects 4=26369
 paramagnetic reson., ground state splitting rel. to deformation, mag. and elec. fields 4=15674-5
 paramagnetic reson. of Pt- and Pd-, expt. and theory 2=10705
 phonon absorption bands, rel. to neutron irradiation 3=23044
 phonon broadening of impurity lines 0=11756
 phonon energies meas. after neutron irradi. 2=16598
 phonon mean free path, 77°-250°K 4=12616
 phonon spectrum, critical point analysis 4=28355
 phonon spectrum and polarization 1=14166
 photocell surfaces, reduction of reflectivity by SiO_2 layer 0=10031
 photoconductivity, decay, In-doped 3=17833
 photoconductivity and i.r. absorption rel. to neutron irradi. 2=8396
 photoconductivity, negative effect 2=652, 23474
 photoconductivity, oscillatory decay, on increasing sweeping current 4=4234
 photoelasticity coeff. 0=7996
 photoelectret effect in Au-doped Si 4=26134
 photoelectric emission 2=17871
 photoelectric emission, amorphous and crystalline states 1=13115
 photoelectric emission, momentum conservation, polarization evidence 4=14748
 photoelectric emission, quantum yield 1=10730
 photoelectric emission, quantum yield 1=4634
 photoelectric emission of various surfaces, comparison 4=14747
 photoelectric emission and work function 2=17872
 photoelements, energy diagrams 0=9997
 photoemission, from p-n junction, induced by internal elec. field 0=12627
 photo-induced negative resistance, high resistivity n-type 4=4235
 photon and electron pair production 3=10101
 piezoreflectance effect not detected 2=18799
 piezoresistance, P-doped, meas. meth., 20° to 150°C 4=12914
 piezoresistance, rel. to pressure to 200 kp cm^{-2} 3=2965
 piezoresistive pressure transducers 3=887
 piezoresistive props., n- and p-type diffused layers 3=10798
 plasma oscillations in heavily doped n-type 4=22550
 plastic deformation, effect of dislocations and O precipitation 2=16956
 plastic deformation, review 2=16951
 plate, X-ray transmitted diffraction intensity, rel. to applied stress direction 3=23525
 polishing and surface props. 0=8139

Silicon—contd

- polishing, transmission electron microscope specimen 2=21577
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 positron annihilation in, ang. distrib. of γ -rays 1=19755
 positron annihil. quanta, ang. distrib. meas. 4=12718
 precipitate particles in single crystals, identification by reflection electron diffraction 1=4087
 precipitation of Ni 3=6537
 precipitation, from Si-Al solid solution 0=16350
 prep., impurity segregation and distrib. 0=13944
 prep. of pure Si from silane 0=819
 proton damage, energy depend. calc. 3=8474
 proton, damage rel. to energy, 1.35 to 130 MeV 4=28447
 proton irradi., damage 4=1544
 pulverized, retention of crystal structure 1=6513
 quantum effects in cyclotron resonance 2=23137
 radiation damage by 0.15-0.7 MeV electrons 1=3696
 radiation damaged, annealing effects 2=19096
 radiation defects, annealing, rel. to P impurity 3=22934
 radiation defect introduction rates in n and p-type 3=6551
 radiation defects, in Li-doped samples, level spectrum of localized centres 3=22849
 radiation effect on minority carrier lifetime 4=28513
 radiation field interaction with lattice vibr. at critical points of Brillouin zone 4=22895
 ranges of charged particles 3=17113
 recombination radiation, decay, meas. 3=20540
 recovery and annealing of neutron-irradiated damage, by thermal conductivity, meas. 4=4005
 redistribution of B due to oxidation 2=21071
 reflection of noble-gas ions 1=10744
 reflection peaks shift by stress 4=20471
 reflectivity spectra, visible and u.v., fine structure and temperature dep. 3=10909
 refractive index, near absorption edge, calc. 0=11668
 refractive index meas. in i.r. 3=20433
 refractive index, 109-750°K, 1.1-1.8 μ 0=16032
 refractive index, from reflectivity at two angles, using graphs, extreme u.v. 3=11926
 refractive index, rel. to temp. 1=11353
 residual gases in vacuum, adsorption and desorption 2=12951
 resistivity and lifetime meas. of small slices, appl. of Siemen's method 4=28568
 resistivity meas. of epitaxial films by i.r. reflectivity technique 4=28570
 resistivity, microwave, of doped spheres 0=5243
 retention of bombarding Kr⁸⁶ ions 2=18627
 ribbons, prep. conditions 2=806-7
 rod and platelet lattice defects 3=22783
 scattering processes in, group theory 1=17392
 screw dislocation 1=19775
 secondary electron emission, and inelastic electron scatt. 2=1492
 secondary emission, by K ions 3=16978
 single crystal wafers, X-ray diff. rel. to imperfection detect. 4=15478
 single crystals, mosaic structure 0=21183
 single crystals, structural defects, after electron irradi., photocond. study 3=22764
 single crystals, texture, by parallel X-ray beam method 0=4628
 solar abundance 4=29441
 solar cells 2=10544
 solar cells, effect of proton irradi. 100, 500 keV 3=14508
 solar cells, radiation resistance 2=4077
 solubility of impurities, maximum, and m.p. distrib. coeff. 3=20910
 spectra, far-i.r., 7.5°K meas. 4=26197
 spectra, i.r. absorption of defects, rel. to irradiation 3=23076
 spectrum i.r., broadening, due to B doping, mechanisms 3=23080
 spectrum and term system of Si IV 0=15564
 spectrochemical anal. 2=19177
 spin-lattice relaxation of conduction electrons 4=23056
 spin-lattice relaxation of donor electrons, theory 1=11489
 spin-lattice relax., Raman, for shallow donors 3=11119
 spin-1 centres after neutron irradi, e.s.r. 4=1543

Silicon—contd

- spin resonance of transition metals in 0=4514
 spin-spin coupling with protons 3=719
 sputtering by A²⁺ ions, yield rel. to A⁺ 1=1930
 sputtering, with argon and CO₂ ions 1=8361
 sputtering, ejected atom distrib. 2=13608
 sputtering, using 1-5 keV Ar⁺ ions 3=9877
 sputtering, strong focusing without channelling 4=25980
 stacking faults, electron micr. study 2=3923
 stacking fault energy 3=17764
 stacking faults, extrinsic and intrinsic, energies 2=23199
 stacking faults and lattice defects near twin boundary 2=16662
 stacking-fault structures when epitaxially grown 3=25286
 stacking faults after vapour growth 3=22794
 structure changes at high press. 3=11210
 structure of clean (100) and (111) surfaces 3=13554
 sublimation rate, 10⁻⁸ mm Hg 4=5476
 surface-barrier counters, response to N ions and α -rays 1=5616
 surface barrier detectors, oxide stabilized 2=3217
 surface damage annealing and Cu precipitation 4=7705
 surface damage due to abrasion 3=18219
 surface elastic waves 1=4400
 surface energy, cleavage meas. 3=25177
 surface examination by C-replica method 4=26706
 surfaces, gas evolution 4=20796
 surface growth and cleavage, electron microscope exam. by replica 4=13646
 surface, (100), bonding model 2=23911
 surface sputtering with A ions 2=22279
 surface states of cleaved specimen, electron microscopy 4=7676
 surface structures 2=19106
 thermal conductivity 1=920
 thermal cond., effect of fast neutrons 4=4003
 thermal cond., effects of Sn impurities, theory 4=9829
 thermal cond., lattice, at low temps. 2=10341
 thermal cond. var. on neutron irradi., 80°-300°K 4=4004
 thermal conductivity, 3°K to melting point, meas. and theory 4=17383
 thermal cond., 5° to 300°K rel. to O, P, B doping 2=23083
 thermal cond., 30-425°C 1=19731
 thermal cond., 300°K 1=16133
 thermal conductivity, 300°-1200°K 3=10611
 thermal conductivity, 300°-1400°K 3=15449
 thermal conductivity, 680-1000°K 3=22671
 thermal expansion 0=2799, 13494
 thermal expansion 2=14386
 thermal expansion anomalous negative low-temp. values 3=10603
 thermal expansion, single crystals, -195° to +100°C 0=11587
 thermal expansion, 23°-530°K, X-ray meas. 3=4824
 thermal expansion up to 900°K, X-ray meas. 2=18535
 thermal oxidation 3=13600
 thermoelastic residual stresses in bonded wafers 1=5085
 thin film, absorption and reflectivity, u.v. 3=2995
 thin films, oxidation 2=23957
 thin layers, electron diffraction study 0=12039
 trace impurities in Si, spectrochem. determ. 2=23984
 transistor-grade, analysis of trace oxygen by α -activation 1=6581
 transition metal impurity ions in, electronic structure 0=17960
 twin boundaries 3=11215
 twin structures, etching and fracturing techniques 0=13965
 twinning and dislocations 1=7837
 twins, 90°, formation and structure 4=30811
 two-phonon indirect transitions and lattice scattering 0=9871
 u.v. absorption and reflectivity 0=8004
 ultrasonic absorption, rel. to thermal parameters 4=6724
 uniaxial strain effects on J = $\frac{1}{2}$ valence-band edge 3=4797
 use in i.r. spectra meas. of fused salts 4=27181
 vacancy diffusion during quenching calc. 2=21076
 vacancy formation, electron bombard., range-energy rel. for displaced atoms 1=14343
 vacancy-interstitial annealing of radiation damage 2=8266, 14483

Silicon—contd

- valence electrons, approx. wave-functions 0=469
 vaporization in Te vapours 1=11859
 vapour pressure 1=4514
 vibr., localized, rel. to B and Li impurities 4=17346
 vibrational amplitudes and Debye temp., from X-ray reflection 2=18522
 wafers, thickness meas. 0=6722
 wave propag., u.s. 4=20201
 wedge, effect on transmittance meas., 2-15 μ 4=20443
 whiskers, cleavage type, formation 0=13964
 whiskers, formation on sublimating surface 4=4558
 whiskers growth 4=10481
 whiskers, growth from Zn-reduced SiCl_4 0=3184
 whiskers, mechanical strength 1=20371
 whiskers and needle-shaped crystals, prep. and props. 4=10480
 whiskers, polished sections, etch figures 0=18322
 work function, local changes due to dislocations 4=21553
 X-ray Bragg reflection, effect of thermal vibrations 2=18521
 X-ray diffr. micrographs, loop-shaped images 2=15113
 X-ray diffraction modifications due to substitutional impurities 4=2091
 X-ray diffr. patterns, single-crystal 3=5097
 X-ray diffr. props. of atomic planes 2=23845
 X-ray diffraction theory with plane infinite incident wave 1=15048
 X-ray diffraction topography 1=7888
 X-ray emission spectra, K β -bands 0=20639
 X-ray emission spectrum 2=8939
 X-ray interference, dynamical effects 2=15015
 X-ray reflection intensity decrease from powder, prob. due to oxidation 4=20751
 X-ray scattering by, Compton effect at $\sin \theta/\lambda = 0.34$ 4=26671
 X-ray scatt., small-angle, thermal and incoherent 4=17581
 X-ray (soft) emission spectra, with photon-counting spectrometer 1=7439
 X-ray spectrum short wave limit 3=4919
 X-ray transmission, impurity effects 3=23098
 zone melting, shape of melt-crystal interface 2=8793
 zone refining, horizontal, in non-reactive crucibles 4=29059
 Ag diffusion and solubility, 1100-1390°C 1=3688
 As and P impurity absorption spectra 2=23557
 B-doped, neutron-irrad., He detection on cleavage 4=22570
 B impurity, spectrochem. estimation 1=19864
 B redistribution due to oxidation calc. 4=25967
 Cd condensation on, effect of surface pre-treatment 4=29810
 Cu diffusion and precipitation 1=10274
 Cu precipitation in, decoration of dislocations, 900-1300°C 1=4987
 Li⁺ drift in, effect of Li-B ion pairing 0=15940
 in Ne elec. discharge, cathode fall 0=19633
 Ni interstitials, distrib. rel. to elec. cond. var. 4=28453
 O impurity, vibration 2=3914
 O-doped, precipitates, X-ray study 4=23287
 O₂ in, diffusion, solubility, light absorpt. and other effects 3=15579
 P diffusion, dislocation distrib. near jn., meas. 4=28471
 P diffusion in, distrib. 1=3687
 P-doped, nuclear dynamic polarization suppression by r.f. radiation 4=28904
 S-doped, i.r. absorpt. spectrum 2=18846
 Si, etching is not necessary for low defects in growth 4=17844
 Si, lattice defects, by X-ray diffraction microscopy and double-crystal spectrometer 3=22707
 Si, single crystal, and MgO foils, electron double diffr. 1=16420
 Si, u.v. reflection spectra, rel. to strong doping 3=18007
 SiII, oscillator strengths meas. 4=25510
 Si I, II, absolute transition probabilities 0=5887
 Si III, 400-10 000 Å spectrum and term systems 1=13949
 Si III, IV in plasma, spectral line width and location 4=18845
 Si III and IV Stark broadening in fully ionized plasma 4=18853
 Si IV spectrum, doublets, fine structure 3=10446

Silicon—contd

- Si XIII, impurity in deuterium plasma, X-ray spectra 3=7581
 Si—O bonds 1=17712
 Si, O impurities round dislocations 3=22761
 Si₂, Si₃ and Si₄ trapped in neon and argon matrices at 4° and 20° K, i. r., visible, and near u. v. spectra 4=25681
 Si²⁹, in silicon, dynamic polarization at low temp. 0=21081
 Si—Al flames, spectrum, energy distrib., colour and brightness temp. 0=8854
 Si²⁺ and Ca²⁺, in $\text{CaAl}_2\text{Si}_2\text{O}_{12} \cdot 6\text{H}_2\text{O}$, differential and self-diffusion coeffs., calc. 4=30572
 Si²⁺ + H, charge exchange cross-section matrix calc. 4=29871
 Zn condensation on, effect of surface pre-treatment 4=29810
- Silicon compounds**

- silicates, dielectric props. 0=13645
- silicates, fused, viscosity and free vol. 4=2663
- silicate glass, i.r. spectra 4.2° to 773°K 3=3019
- silicate glasses, colour centres, thermal stability 4=20308
- silicates, heat of crystallization, from structure
analogy 3=18269
- silicates, hydrated, n.m.r. study of structure of water in
interlayers 4=10347
- silicates, i.r. absorption spectra 1=14610
- silicates, interatomic distances, nature of Si-O
bond 1=20565
- silicates, layered, reported departures from ideal
structures, criticism 0=6362
- silicates, luminescence efficiency, thin layers 0=2963
- silicate materials, hole formation, near atomic
dimensions 3=16468
- silicate phosphors, Pb + Mn activated 1=6226
- silicate pyroxenes, high-pressure phase trans-
formations 4=4509
- silicates, Si-O-Si bond angles 2=10897
- silicates, Si-O, tetrahedral distance 3=25715

Silicon compounds—contd

- silicates, vibrational spectra of plane Si-O
rings 1=3828
- silicide layers on Mo, imperfections, influence of
stresses 4=7704
- silicone, droplet diffusion in elec. field 1=15949
- silicone fluid, acoustic impedance in circular tubes 1=11758
- silicone liquid scintillant 0=5032
- silicone oils, refractive index 0=2230
- silicone polymers, fracture under shear 4=27151
- silicones, viscosity, pressure depend. 1=106
- silyl halides, potential constants and thermodynamic
props. 3=8280
- spodumene, crystallization, from Raman spectra 3=5086
- stishovite (SiO_2), crystal structure 3=5108
- stishovite, crystal habit rel. to crystallization
temp. 4=26565
- synthetic quartz, optical properties 1=8979
- topaz, micro-disk patterns on crystal faces 2=8774
- tourmaline, crystal structure 2=15032
- transition-metal silicides, elec. cond., thermoelec.
power and Hall effect 1=5004
- tridymite (SiO_2), crystal structure 1=15090
- trisilane, n.m.r. spectrum rel. to parameters 4=16129
- vitreous silica, stress relaxation, by He or proton
irrad. 4=15507
- vitreous silicates, structure, similarity to high temp.
crystals of same composition 4=2136
- Ag alloys, stacking-fault probabilities 4=4063
- Ag halides, h.p. microscopy rel. to phase props. 4=15743
- Ag halides, thermal expansion up to melting points 4=3999
- Ag-SiO-Ag diode, S-type negative recryst. 4=28596
- Fe-Si (4%), domain wall velo., effect of plastic deformation
and irradiation 3=11068
- Si alloys, ternary Laves phase, reduced atomic
radius 4=7645
- Si carbide polytype 105R, crystal structure 4=7639
- Si carbide polytype 36H, anomalous crystal
structure 4=7640
- Si carbides, optically active lattice vibrations 4=12605
- Si halides, spectrochemical analysis of
impurities 4=7792
- Si hydrides and derivatives, coupling consts. 2=14330
- Si hydrides, formation, in Mg hot extraction, mass
spectrometric study 1=20784
- Si iron, electrolyte etching, dislocation study 1=2522
- Si nitride, dielectric films on Mo 0=4376
- Si oxide films, optical props., 0.2 - 1.6μ , rel. to
appl. 4=22893
- Si oxide films, thermally oxidized, absorpt. 9μ , decrease
on γ -irradiation 3=13189
- Si, solubility of impurities, maximum, and m.p. distrib.
coeff. 3=20910
- Si-Au alloy, eutectic composition 2=4450
- SiBr₄, potential consts. calc. 3=17588
- α -SiC, absorpt. by free carriers 2=2240
- α -SiC, crystals, dendritic growth, mechanism 0=1891
- α -SiC, luminescence, 5450-6700 Å 3=25485
- α -SiC, n-type, Hall effect and optical absorpt. 4=26220
- α -SiC, photoelectric props. of alloy p-n junctions 0=20939
- SiC, α -modification, photocond. 2=8441, 14585
- SiC, α -phase, electronic cond. 300° - 1500°K 3=6603
- SiC, β , crystal growth form and impurity
distrib. 4=13546
- β -SiC, optical absorption and semicond. energy gap 0=16062
- SiC, bond character rel. to A^{III} B^V cpds. and ZnS 3=2688
- SiC, coding matrix 0=6644
- SiC, crystal bonds 2=20899
- SiC, crystal bonds 3=6451
- SiC, crystal growth, by decomposition of SiCl_4 by tol ol,
on C 4=13545
- SiC, crystal growth, polymorphism 4=10477
- SiC, crystal growth and semicond. props.
(conference) 0=4365
- SiC, crystal growth from volatile compounds hot
W wire 2=21487
- SiC, crystal layer stacking 1=15074
- SiC, crystal structure of 174-layer modification 1=7866
- SiC, crystal structure, atomic, new modification 4=4621
- SiC diode "laser" 4=14956
- SiC, dislocations 0=13538
- SiC, dislocations, etching and electron microscope
studies 4=4062

Silicon compounds—contd

 SiC, electroluminescence in n-type region 3=6684
 SiC, epitaxial growth 4=30827
 SiC, 15R, optical props. and exciton processes 4=7157
 SiC films, high photovoltage 4=22803
 SiC, fluorescence spectra 1=10109
 SiC, 417R and 453R, crystal structure, atomic 4=26672
 SiC, grown p-n junctions 0=15960
 SiC, growth, high spiral steps, breakdown 3=20798
 SiC, growth of single crystals by sublimation in Ar 3=5085
 SiC heated to 1000°C, spectral emittance 4=14443
 SiC, hexagonal, hole and electron mobility 3=10838
 SiC, insulated crystals, electroluminescence 0=8024
 SiC, international conference 0=20714
 SiC, lattice absorption bands 1=11372
 SiC, long period structure and growth from imperfections, X-ray investig. 4=23472
 SiC, luminescence, on impact by alkali halides 4=1765
 SiC, luminescence of N-exciton complexes and interband absorption 4=10218
 SiC, minority carrier lifetime, measurement 1=11308
 SiC mixtures, i.r. emissivity 2=7453
 SiC, n-type, ENDOR meas. 4=1888
 SiC, n-type, transient recomb. meas. 3=10840
 SiC, new polytype, growth and crystal structure 2=10865
 SiC, 174 layers, structure analysis 0=10314
 SiC, optical consts., 2.5-1.6 μ 0=6164
 SiC, optical, elastic and piezoelectric props. 1=899
 SiC, p-n junctions, electron emission 1=16360
 SiC p-n junction, hot electron emission 2=2182
 SiC, p-n junctions, hot electron emission 3=883
 SiC p-n junction laser 4=9000
 SiC, p-n junction photo-e.m.f. 2=4069
 SiC, p-type, acceptor levels and donor concentrations 1=17716
 SiC, parallel growth and X-ray analysis 2=14943
 SiC, phase transformations 4=2089
 SiC, photoconductivity kinetics 3=8571
 SiC, photocond. and p-n photoeffect 3=13136
 SiC, photocond. relax. and carrier lifetimes 3=15634
 SiC, photo-e.m.f. due to impurity and intrinsic excitation 2=10539
 SiC, polarized edge emission 0=8012-13
 SiC, polymorphism 4=4521
 SiC, polytypes, anomalies 3=11212
 SiC, polytypes, rel. to dislocations 4=2009
 SiC, prodn. and props., bibliography 4=5000
 SiC, as reactor irradiations conditions indicator 2=18389
 SiC, recomb. radiation of p-n junction 2=4044, 6476
 SiC, reflection anomalies due to phase relations between crystal domains 1=15189
 SiC, resistors, dynamic V-I characteristics 0=15886
 SiC, semicond., p-i-n junction, V-I characs., photovoltaic effect, p-n luminescence 3=13082
 SiC single crystal platelets, crossbending strength 3=20708
 SiC (6H), exciton recombination radn. and phonon spectrum rel. to multiple donor and acceptor levels 2=23123
 SiC, 6H and 4H polytypes, exciton and interband absorption 2=23562
 SiC, 6H, luminesc. of nitrogen-exciton complexes 3=18034
 SiC, space-charge-limited currents 2=23408
 SiC, spectra, luminescence 3=20485
 SiC, sputtering by positive ions 3=4214
 SiC, surface steps on crystals 1=1462
 SiC, thermal conductivity 2=10343
 α -SiC, thermoelec. power, effect of phonon drag 2=16764, 18758
 SiC, thermometer, resistance, 4-10°K 3=9666
 SiC, traps in grains, meas. from elec. props. 2=14563
 SiC, u.v. absorpt. spectrum, var. with temp. 3=10990
 SiC, whisker growth by sublimation 4=20739
 SiC, whiskers, growth, twist and polytype 0=1886
 SiC, X-ray emission spectra, K β -bands 0=20639
 SiC₂, mean ampl. of vibr. and thermodyn. props. 4=15348

Silicon compounds—contd

- SiC-B₄C system, phase equilibria 4=20698
 Si(CH₃)₄, potential consts. calc. 3=17588
 Si-C, contamination effect on Si epitaxial layer bonding props. 4=30883
 SiCl, vibr. analysis of B-X bands 3=10522
 SiCl₄, binary systems with SnCl₄, CCl₄, TiCl₄, dielec. props. 2=19578
 SiCl₄, molec. force consts. 2=22957
 SiCl₄, potential consts. calc. 3=17588
 SiCl₄, Raman line intensity, temp. var. 1=15879
 SiCl₄, valence force fields calc. 3=17551
 SiCl₄ vapour, u.s. absorpt., dispersion 2=2772
 SiCl₄, X-ray investig., electron density distrib. 4=21097
 Si-Co, molten, density rel. to composition 2=19543
 Si-Co, semicond. and thermoelec. props. 0=13604
 Si-Cu alloy, dislocation density after cold working 2=3916
 SiD, vibr.-rotational energy transfer 3=6414
 SiDCl₃, valence force fields calc. 3=17551
 SiD₃NCS, molecular consts. 3=22573
 SiF₄, crystal structure 1=12348
 SiF₄, γ -irradiation at low temp. 3=12874
 SiF₄, isothermal PV curves, to 20 000 kg/cm² 0=14042
 SiF₄, n. m. r. of F¹⁹, isotope effects of Si²⁹ 4=3911
 SiF₄, potential consts. calc. 3=17588
 SiF₄, Raman intensities for $\nu_1(a_1)$ modes 3=22559
 SiF₄, $\Sigma^- \rightarrow \Pi$ transition meas. 2=12332
 SiF₄, thermodynamic props. 3=21636
 SiF₂, u.v. emission spectrum 2=6182
 SiF₃H and SiF₃D, anharmonicity, pot. consts. and thermodynam. props. 2=10239
 Si-Fe alloy, magnetostriction curves rel. to crystal structure state 4=20551
 Si-Fe alloy, textured, recrystallization structure 2=12701
 Si-Fe, domain boundary movements, low frequency losses 2=14777
 Si-Fe, crystal orientation growth requirements, cube-on-edge 4=13655
 Si-Fe crystals, deformation bands, by electron microscopy 3=8912
 Si-Fe crystals, rolled and annealed, microstructure study by electron transmission microscopy 4=23171
 Si-Fe crystals, surface magnetization 1=11434
 Si-Fe crystals, temp. hysteresis of domain structure 1=3902
 Si-Fe crystals, Weiss domains 1=11436
 Si-Fe, cubic growth by atmosphere control 0=12007
 Si-Fe, deformed, substructures and recrystallization 3=23468
 Si-Fe, demagnetization losses, effect of impurities 1=6284
 Si (3.5%) -Fe, domain structure, 0-600°C, from longitudinal Kerr effect 3=11071
 Si-Fe, domain tube structure 0=16135
 Si-Fe, domain wall thickness 0=3039
 3% Si-Fe, domain-wall widths 3=13252
 Si-Fe, effect of stress on mag. domain walls 1=14710
 Si-Fe, elec. resistivity anisotropy 1=14362
 Si-Fe films, by cathode sputtering, micromag. structure 2=15094
 Si-Fe films, ferromag. domain structure 3=11076
 Si-Fe, grain boundary and surface energies, re-view 4=13622
 4% SiFe, growth of single-crystal rods 2=14954
 Si-Fe, hot-worked, recrystallization 4=23343
 Si-Fe, magnetic domain structure 1=6295-6
 Si-Fe, first magnetocrystalline anisotropy constants 1=7747
 Si-Fe, mag. losses at low frequencies and high flux densities 1=6290
 SiFe, mag. props. and eddy-current losses 1=6339
 Si-Fe, mag. props. rel. to crystal growth rate 1=20096
 Si-Fe, magnetization of single crystals 1=14701
 Si-Fe, magnetostriction curves rel. to domain structure 4=17659
 Si-Fe, magnetostriction, temp. depend. 3=1151
 Si-Fe, magnetothermal effects 1=1220
 Si-Fe, mobility of edge dislocations 0=6042
 Si-Fe, neutron irradiation, effect on mag. props. 0=13777

Silicon compounds—contd

- Si-Fe, 90° Bloch walls, energy and orientation dependence on stress 1=14713
 Si-Fe, plastic microstrain 2=6734
 Si-Fe, recrystallization texture 0=18291
 Si-Fe, sheet, mag. domain patterns 1=1222
 Si-Fe single crystal, surface magnetization, Kerr hysteresis 1=11433
 Si-Fe single crystals, effective field of Hall effect 1=3721
 Si-Fe single crystals, extraordinary Hall effect 1=3720-1
 Si-Fe, slip band structure, dislocation multiplication 2=8226
 Si-Fe, stress effect on mag. domain struct. 4=22994
 Si-Fe tapes, mag. props. of wound cores 2=12707
 Si-Fe, thermal etching 0=18329
 Si-Fe, thermomagnetic props. and domain nuclei 0=11846
 Si-Fe, time decrease of permeability 1=2481
 Si-Ge alloy films, prod. and examin. 2=10807
 Si-Ge alloys, paramag. susceptibility rel. to temp. 2=23636
 Si-Ge crystals, vapour growth, epitaxial 3=3281
 Si-Ge mixtures, isotopic phonon-phonon scatt. 2=23090
 SiH derivs., proton and F¹⁹ chem. shifts 3=22603
 SiH₃ group, deform. freqs., symmetrical 4=3853
 SiH₄, compression and solid state phase transitions 2=4357
 SiH₄, indirect p-Si spin coupling meas. 4=15382
 SiH₄, potential const. calc. 3=17588
 SiH₄, prep. and thermal decomposition 2=7091
 SiH₄, prepn. for ionization chamber 3=2508
 SiH₄, vibr.-rotational energy transfer 3=6414
 SiH₄, SCF MO one-centre basis set 4=20046
 Si₂H₆, i.r. spectrum analysis 2=16529
 SiHBr₃, mol., thermodyn. props. 3=12798
 SiHCl₃, mol., thermodyn. props. 3=12798
 SiHCl₃, valence force fields calc. 3=17551
 (SiH₃)₃N, mols., planar structure, from zero value of electric dipole moment 4=6605
 SiH₃NCS, molecular const. 3=22573
 SiH₃PH₂' and SiH₃AsH₂', proton resonance 3=12863
 SiH₄, potential const. calc. 3=17588
 Si-KOH boundary, photoelectrochemistry 3=6923
 SiMgBaO₄, crystal struct. atomic, density, mag. susceptibility 4=23473
 SiN, B²Σ⁺-X²Σ⁺ spectrum 3=8269
 Si-Ni, molten, density rel. to composition 2=19543
 Si₂N₂O, crystal struct., atomic 4=23475
 Si₃N₄, elec. cond., effect of C and Ti additives 2=8303
 Si₃N₄, thin films, dielectric constant 3=8555
 Si-Ni solid solution, Ni solubility, 900° to 1350°C 3=3338
 Si-Ni solid solutions, prep. 2=23890
 SiO and CeO₂, evaporated, as optical film, protective, for mirrors 3=11927
 SiO and CeO₂, evaporated, for optical films, anti-reflection 3=11928
 SiO evap. films, stress in effect of exposure to air 3=1365
 SiO films, abrasion resist. meas. 4=23112
 SiO films with Ag and Au, optical reflection, rel. to surf. conductivity 4=27888
 SiO films on Al mirrors, annealing 0=8783
 SiO films, annealing of residual stresses 2=838
 SiO films, dielec. props. and d.c. cond. 4=22766
 SiO films, dielectric props. meas. 4=1655
 SiO films, evap. rel. to constit., density, dielec. const., and insulation 2=17521
 SiO films, optical const. and thickness meas. 2=21864
 SiO films, optical props. rel. to evap. rate 3=20486
 SiO films, prod. rate and thickness meas. 2=21583
 SiO films, stress anisotropy rel. to prep. 3=11144
 SiO films, thickness meas. 2=21863
 SiO gettering action in v.h. vacuum 2=9321
 SiO, intensity distrib. in forbidden ¹Σ⁺-³Π_g transition 3=10523
 SiO molecule, Franck-Condon factors, calc. 2=16521
 SiO oxidized films on Al, reflectance 1=10095
 SiO on Pt and Inconel, heated to 1000°C, spectral emittance 4=14443
 SiO, ¹Σ⁺-³Π_g, spectrum 1=9932
 SiO, sublimated films, residual stresses 3=11146
 SiO, thin films, dielectric constant 3=8555
 SiO, undercoating of NiFe mag. memory devices 2=14784

Silicon compounds—contd

- SiO₂, absorption, acoustic, u.s., OH ion effects low temp. var. 4=22486
 SiO₂, adsorption of benzene 3=1382
 SiO₂, adsorption of hydroxyl groups, spectrum and heat vars. 3=8922
 SiO₂, "Aerosil" silica, adsorption and diffusion of CO₂ 3=18399
 SiO₂, bending, acoustic compliance 4=10399
 SiO₂, coatings on Si, prep. 2=15141
 SiO₂ colloid, light scatt., effect of NaCl 2=23977
 SiO₂, colloidal, adsorpt. on Al₂O₃ 4=23684
 SiO₂, conductivity, elec., fused, solid and liquid, 1000-2480°C 4=12962
 SiO₂, cristobalite, neutron irradi., α-β inversion temp., structure 0=15878
 SiO₂ crystals, thermal expansion 1=918
 SiO₂, doped, colour centres prod. by X-ray irradi., optical and thermal bleaching 4=15499
 SiO₂, effect on Bi₂O₃ polymorphism 4=23253
 SiO₂, evaporation, nuclear target prep. 1=7400
 SiO₂ fibres, periodic structure 3=18370
 SiO₂ fibres, tensile strength 4=13444
 SiO₂, field emission 1=13099
 SiO₂ films for capacitors, vacuum deposition 1=6562
 SiO₂, film deposition, low-temp. technique 2=10936
 SiO₂ films, diffusion of P 0=11642
 SiO₂ films on GaAs, Zn diffusion 4=22616
 SiO₂, film growth on Si, in O₂, at 1250°C, mechanism 3=23516
 SiO₂ films, imperfections and gas permeation 2=10943
 SiO₂, films, low temp. deposition method, gas discharge 4=2118
 SiO₂ films, passivation of p-n junction particle detectors 3=7749
 SiO₂ films, phases during evap. of SiO 2=8884
 SiO₂ films on Si, refr. index and thickness 3=13149
 SiO₂ film on Si, struct. props. 4=23588
 SiO₂, films, 350-5000 Å, insulation 3=21388
 SiO₂, fused, defect prod. by irradiation 2=12478
 SiO₂, fused, fast-neutron-irradi., dielectric props. at room temp. 4=28620
 SiO₂, fused, Raman band intensities in Stokes region, temp. depend. 1=5052
 SiO₂ fused, u.s. wave interaction 3=25191
 SiO₂ gel, adsorption of gases, data correl., low press., supercrit. temps. 4=29192
 SiO₂ gel, surface effects of gamma-rays 2=12482
 SiO₂ glass, densification, heat treatment 4=13409
 SiO₂ glass, densification in rigid state up to 80 kbar 4=13408
 SiO₂ glass, elastic moduli and u.s. attenuation, effect of fast-neutron irradi. 3=13330
 SiO₂ glass, neutron-irradiated, defect study by u.s. absorption 1=20634
 SiO₂ glass, 96%, "small pore", spectrum, near i.r. 4=22889
 SiO₂ glass, specific heat, low-temp. excess 3=767
 SiO₂ glass, thermal expansion and thermal history 2=14389
 SiO₂ glass, Young's modulus rel. to refr. index, ht. effect 4=27864
 SiO₂, high-press. polymorphs, coord. rel. to spectra 4=744
 SiO₂, i.r. absorption, 50-350 μ 0=6927
 SiO₂, infrared reflection spectra 1=11379
 SiO₂, lattice const. and density, precision 1=1677-8
 SiO₂ layers, thickness meas. by u.v.-visible interf. 4=30882
 SiO₂, melting 0=10321
 SiO₂, molecular vibr. and rot., calc. 4=28233
 SiO₂, molten, viscosity up to 2200°C 4=16096
 SiO₂, n irradi., crystalline α-quartz prod. 4=4552
 SiO₂, neutron spectrometer crystal 0=5572
 SiO₂, OH-free, u.s. relaxation loss 4=17352
 SiO₂, optical absorptions, radiation induced 1=12406
 SiO₂, optical constants and diel. props. in metal-SiO₂-Si system 2=8458
 SiO₂, p-i-p junctions, rectification and e.m.f. 3=10849
 SiO₂ particles, in Cu-SiO₂ alloy, coarsening 4=30868
 SiO₂, photoelec. emission, polarized light effect 2=7648
 SiO₂, protective film for resistance temp. gauge 0=2274
 SiO₂, (quartz and silica) effect of neutrons 1=17592

Silicon compounds—contd

- SiO₂ (quartz, vitreous silica, cristobalite), heat capacity at low temps. 4=6749
 SiO₂, Sb diffusion 3=25294
 SiO₂ in Si, elec. and optical props. 2=23352
 SiO₂ (silica), neutron irradi., light scattering asymmetry 1=19946
 SiO₂ silica with < 1% Al, thermoluminescence and coloration rel. to heat treatment 4=4306
 SiO₂, surface conductivity, due to adsorbed molecules 3=25318
 SiO₂, thin films, dielectric constant 3=8555
 SiO₂, thin films on Si, diffusion of P 4=28483
 SiO₂, thin films, thickness meas. 4=29187
 SiO₂, transducer thickness effects on meas. of u.s. vel. 4=27266
 SiO₂, use in interference light-filters 0=3639-40
 SiO₂, vibrational spectra 4=1282
 SiO₂, viscosity, effect of temp. and composition 2=832
 SiO₂, vitreous and crystalline, defect sites, appl. to thermal conduction 4=28387
 SiO₂, vitreous, dilatations due to irradi. 3=4899
 SiO₂, vitreous, X-ray scatt., surface effects 2=8899
 SiO₂ windows, construction technique 0=10335
 Si₂O, SiO, Si₂O₃, X-ray emission 0=1970
 SiO₄ solution, N.M.R. 1=11768
 SiO₄ in Si, elec. and optical props. 2=23352
 SiO₂-Al₂O₃, molten, viscosity up to 2200°C 4=16096
 SiO₂-Al₂O₃-Li₂O glasses, selective cryst. 2=6783
 SiO₂ + C, electron field emission 3=21851
 SiOC₂H₅ = Si₂O. (C₂H₅)₂O, X-ray emission 0=1970
 SiO₂-3CaO, polymorphism 3=3301
 SiO₂-Cr₂O₃ catalysts, mag. props. 0=11805
 SiO₂-MoO₃, MoO₃, whisker growth on 1=9119
 (66.7%)SiO₂-Na₂O, ordered rel. to disordered phases 3=11303
 SiO₂-UO₂ system phase diagram 4=5446
 (Si₃O₇)⁴⁻ anion, i.r. vibration spectra 1=2327
 (Si₃O₇KAl)₄, orthoclase, i.r. reflection spectrum, 10 to 30 μ 3=18014
 SiR₃H₃X₃ where R is alkyl and X halogen, mag. props. and bond interactions 4=30467
 SiS, rotat. analysis of E-X band system 2=6145
 Si-SiO₂-metal system, optical and diel. props. 2=8458
 SiZnBaO₄, crystal struct., atomic, density, mag. susceptibility 4=23473

 arc stability 1=1899
 atom, Ag^{113, 115}, h.f.s. separations in ground state 4=12116
 atoms, e.s.r. in paraffins at 77°K 3=15948
 atomic electron affinity, surface ionization meas. 4=18678
 atom, K⁺ absorption, electron emission meas. 4=12416
 atoms, in KCl, on X irradi., electron nuclear double reson., and h.f.s. 4=1889
 atoms, optical transition probabilities 0=7732
 atom recoils from (γ,n) reaction, range 1=4858
 atomic spectra, Ag I and II isotope shift 2=10211
 atoms, spectral line collision broadening 4=25511
 atoms, trapped in H₂O and C₂H₅OH, e.s.r. at 77°K 3=25575
 atoms trapped in undecane media, liq. N₂ temp., e.s.r. 4=13317
 bicrystal prod. 2=6730
 bombarded by 10-100 keV, secondary electron emission 2=1494
 Bordoni peaks, rel. to deformation and annealing 3=23298
 bremsstrahlung circular polariz., in magnetized Ag 0=7325
 Brillouin zone energy calc. 2=18553
 chemisorption of H₂ and CO, work function, bond 0=18452
 chemisorption of S on (111), (110) and (100) faces 4=26724
 cohesive energy 0=20722
 cold work damage, X-ray study 3=18202
 cold-worked, annealing spectrum 2=4335
 cold-worked and annealed, thermoelec. power at low temp. 0=18081

Silver—contd

- cold-worked, dislocation distribution flow stress, and stored energy 0=20813
 cold-worked, stored energy release on annealing 3=11173
 colloidal, bleaching inside AgCl crystals 0=9913
 compressibility and volume, temp. variation 4=1401
 compression tests on single crystals 4=30764
 cond., elec., crystal whiskers, low temp. min. 4=174/8
 condensation energy on glass, NaCl and KBr 0=4696
 condensation in vacuum, microheterogeneous 2=1308, 7468
 contact to CdS single crystals, electrical props. 4=12853
 counter-tube cathode, spectral yield curve 0=9229
 creep props. rel. to O content 3=13363
 cross-slip and stacking-fault energy 3=1230
 crystals, alloy formation by nuclear transmutations 4=15227
 crystal defects on quenching after heating in air 4=6823
 crystal dislocation relaxation peaks after deformation at 4.2°K 4=7429
 crystal divacancies, binding energy and quenching 4=22562
 crystal growth condensation on NaCl, in air and vacuo 4=13547
 crystal growth, in H₂S, reaction rate and product growth 0=16257
 crystal growth, simple method 0=3174
 crystal growth, from vapour, condensation coeff. 0=12003
 crystals, hillocks, etch pits, unstable faces, formation conditions 3=17714
 crystal stacking fault energy calc. 4=22603
 crystal struct., atomic, lattice var. with grain size 4=20764
 crystal structure, effect of AgS surface growths on electron diffr. 4=2090
 crystallites on W, coalescence, rel. to substrate topography, 650°-1000°K 4=10614
 crystallization, electron diffraction study 2=14968
 Debye temperature 1=17425
 defect clusters, rel. to fission fragment irradi. 3=17803
 defects distrib., under deformation, thermo-e.m.f. study 1=14247-8
 defects, role in nucleation of sulphide patches 2=6846
 deformation, 1.7-473°K 0=1851
 deformed, vacancies and dislocations, thermo e.m.f. study 1=14254
 de Haas-van Alphen effect 0=16121
 de Haas-van Alphen effect and Fermi surface, at low field 4=28772
 dendrites, twinning 1=5088
 dendritic electrodeposits, orientated growth 2=6765
 density in liquid state 2=2701
 deposition, on C replica of rocksalt, preferential orientation 0=21171
 deposition and dissolution kinetics 0=4713
 desorption energy from Mo and Ni 3=23521
 deuterium ion introd. into metal 2=12606
 deuteron scatt., elastic, 11.8 MeV 3=17490
 diffusion at Ag-AgCd interface, tracer study 0=1606
 diffusion in AgBr, press. and temp. depend. 1=989
 diffusion in Ag liquid 4=24196
 diffusion, in Ag, Ni, Au, surface 3=20232
 diffusion in Al, volume and boundary rates, temp. depend. 1=14299
 diffusion in Au, surface effects 4=10603
 diffusion in BiTe 2=18607
 diffusion in Bi₂Te₃-Bi₂Se₃, and escape, effect of atmosphere 3=20219
 diffusion in Cu bicrystals, grain boundary 3=6533
 diffusion in Cu, effect of Be impurities 0=4303
 diffusion in Cu, in elec. fields 4=20307
 diffusion in Cu and Cu-Ag alloy 1=986
 diffusion, in Cu, plastically deformed 1=3689
 diffusion in Cu₂O 0=11639
 diffusion in Cu₂O, new acceptor energy level 1=19876
 diffusion in Ge 2=12453
 diffusion in Ge, in elec. field 0=15870
 diffusion in Ge, radiotracer techniques 1=19802
 diffusion in glass, self 4=30575
 diffusion, in liquid Bi, 300-700°C 3=21331
 diffusion in Mg, ion mobility, d.c., and scatt. 3=22831

Silver—contd

- diffusion in Ni 2=18608, 23209
 diffusion in ordered and disordered CuZn 1=10009
 diffusion in quartz in elec. fields 1=12404
 diffusion, into rutile and perovskite ceramics 1=17564
 diffusion, self, grain boundaries, and charge carrier type 4=9991
 diffusion, self, meas., temp. var., by radioactive tracer 4=12802
 diffusion, self, surface 3=22821
 diffusion, in Si, 1100-1350°C 1=3688
 diffusion and solubility in Bi₂Te₃ 2=18606
 diffusion and solubility in Bi₂Te₃ 3=12998
 diffusion and solubility in GaAs 4=1512
 diffusion and solubility in Ge 2=12454, 14458
 diffusion, surface, coeffs. meas. 3=17792
 diffusion of Ag¹¹⁰ in Zn, anisotropy 2=2101
 diffusion, anomalous, of Ce, Nd and Pm 3=13005
 diffusion of Fe, Co, Ni, discrepancies 4=20305
 diffusion of impurities in Ag 1=14316
 diffusion of Fe, Co, Ni, poss. surface effects 4=12800-1
 diffusion of Fe, Co, Ni, rel. to solubilities 3=13006
 diffusion of Fe^{55,59} in, comp. with theory 1=4993
 diffusion, of Ni 2=3942
 diffusion of Ni and Co 3=22814
 diffusion of Pd, meas. and analysis 4=6870
 diffusion, thermal, of substitutional impurities 4=17440
 dislocation density, after deformation 1=11206
 dislocation density, in strain, from microhardness data 1=11209
 dislocations, edge, fast moving 2=12433
 dislocations, elec. cond. rel. to stacking faults 2=6338
 dislocations, etch pits in single crystals 3=806
 dislocations, interaction with Rh film 1=965
 dislocation relaxation 1=17533
 dislocation structure, cold-worked polycrystalline specimens, annealing processes 0=20822
 disorientation of single crystals by ion bombard. 1=17591
 dissolution in emulsion by fixing solutions 0=194
 effect of neutron irradi. on crystal cell size 1=3703
 elastic constants, -183° to 300°C 3=20688
 elastic modulus, torsional, dynamic meas. 2=8698
 elec. cond., change due to torsional deform., law 3=8490
 electrical cond., effect of plastic deformation, +20° to -196°C 2=23235
 electrical conductivity, plastic deformation effect, 77-293°K 4=22682
 electric cond. for vacancy scatt., pseudopotential method 4=6771
 electrical contacts, metal migration 3=9690
 elec. resistance at low temp. 1=7615
 elec. resistivity, effect of plastic strains 3=13036
 electrical transfer, in AgZn 2=8247
 electrical transfer in Al, effective charge 2=10416
 electrodiffusion 2=6374
 electrodiffusion in Bi, d.c. -induced, analysis 4=12785
 electrolytic deposition, luminous emission near cathode 2=856
 electrolytic deposition for targets and radioactive sources 3=24532
 electron beams, energy rel. to atomic displacements 2=12476
 electron beams, energy dissipation, fair agreement for medium penetration 4=6817
 electron bombarded, characteristic energy loss 2=10365
 electron diffraction intensities and structure amplitudes rel., and its appl. in structure analysis 4=10521
 electron emission, secondary, 20°-450°C 3=427
 electron energy loss, ang. depend., rel. to theory 2=8198
 electron energy loss by bremsstrahlung at 1MeV 3=17699
 electron energy losses 2=2073
 electron energy losses due to surface plasma oscill. 4=9937
 electron irradi. effects at 10°K, elec. cond. study 0=6066
 electron pair formation in, cross-section by photon absorption 0=5534
 electron range in, 40-160 keV 0=2399
 electron range, kilovolt, range interpretation 2=12409
 electron scatt. by films, background intensity 3=4202
 electron scattering, at small angles, 500 keV 1=329
 electron scattering in thin foils 1=9999

Silver—contd

- electron scatt., unsymm. ang. distrib. for charact. surface losses 4=28429
 electron secondary emission 2=3077
 electron states from i.r. optical consts. and elec. cond. 2=6538
 electron transitions, interminimum, and scattering 4=25887
 electrotransport mobility of Sn impurities 3=8433
 energy-band structure 1=17460
 epitaxial film, similarity with Au, Cu 3=23506
 epitaxial growth on NaCl cleaved in vac. 4=29070
 epitaxial thin-film growth, in-situ meas. 4=29071
 epitaxy on 2 differently oriented LiF crystals 4=10484
 equation of state from interatomic potential 3=4828
 equations of state, at high pressure 0=11549
 etching by ion bombardment, electron micr. study 3=18241
 etching, thermal 2=14934-5
 etching, thermal, in various atmospheres 2=21470
 evaporated films, 30-2500A thick, stress 1=11440-1
 evaporated layers, particle track visualization using electron microscope 2=22374
 evaporation and thermal etching 1=4013
 evaporation from W boat, directional props., film thicknesses 2=23915
 fatigue, slip processes correl. with hardening 3=20748
 fault arrays, produced by AgBr exposure to light 3=20199
 Fermi surface, from de Haas-van Alphen effect 1=17455
 Fermi surface, dimensions 2=8190
 Fermi surface, dimensions 3=6495
 Fermi surface, effect of pressure 3=8398
 Fermi surface from magnetoacoustic effect 1=19739
 Fermi surface from magnetoacoustic effect 1=19741
 Fermi surfaces, from u.s. attenuation in mag. field 0=13502
 field emission, effect of crystal defects 2=22246, 20015
 filament growth from AgI crystals 3=1268
 films, absorption, light, anomalies due to granular struct 4=1775
 films, absorption, 2000-4000 Å, Walter, Rasigni relations 4=1749
 film on Ag, Pd, Ni, structure 3=1371
 films, ageing 4=10608
 films, amorphous, obs. of rapid crystallization 2=2440
 films on amorphous support, microstructure examination 2=10951
 films, cond., elec., thickness var., and electron in f.p. 4=22683
 films, contact potential and work function 2=8268
 films, deposited on water surface 3=25774
 films, defects produced on evaporation 3=1374
 films, dispersed, photo-emission 2=11698
 films, effect of O₂ on elec. resist. 4=26014
 films, effect of rate of deposition on elec. cond. 2=14498
 films, effect of structure on optical resonance 2=19111
 films, effect on supercond. transition of Sn films 2=22122
 films, elastic deform., electron diff. exam. 4=1928
 films, elec. cond., effect of gas adsorption meas. 4=7713
 films, elect. cond., effect of Sb diffusion, 70-105°C 1=979
 films, elec. cond. and structure 2=8283
 films, elec. cond. rel. to thickness 2=18636
 films, elec. props., flicker effect 2=8280
 films, elec. resist. rel. to thickness non-uniformity 2=12491
 films, elec. resistance and thermoelec. power 2=14495
 films, electrical resistance variations, causes at -130°C 1=17614
 film, electron beam energy losses 3=20152
 film, electron diffraction spot pattern intensity meas. 3=1283
 films, electron scatt. at < 10 keV, transmission, ang. distrib. and energy spectrum 1=1922
 films, epitaxial growth on Ge and Si surfaces 4=29188
 films, evap., defects, electron microscope study 0=17927
 films, evaporated, bridging phenomenon 4=20743
 films evaporated on glass, electrical resistivity rel. to temp. 1=11258
 film, evaporated on pyrex, influence of vac. on struct. 4=23587
 films, f.c.c. metals deposited, structure of layer 1=20671
 films, on glass and quartz, resistance, temp. depend., structure 1=2548

Silver—contd

films, granular, electrical properties and flicker effect 3=15540
 films, granular, light scattering 1=18618
 films, growth defects 2=6352
 films, heat treated, optical absorpt. 2=21246
 films, Im $1/\epsilon$ absorpt. spectrum 3=10963
 films, light, absorption, refractive index, 4000-14 000 Å 4=7093
 films, low lying energy loss 3=10633
 film on monocryst. Cu layers, dislocation struct. and lattice const. assimilation 4=23589
 films, in multilayer dielec. films, interference effects 2=5178
 films for multiple-beam interferometry 3=21560
 films, neutron irradiat. effects 3=22869
 films, non-cryst., elec. props. at liq. N temp. 2=6423
 films, non-crystalline, electron diffr. invest. 2=837
 films, optical absorpt. spectrum rel. to structure 4=22891
 films, optical const. rel. to wavelength 3=10902
 films, optical density meas. 3=20934
 films, optical and electrical props. 1=10097
 films, optical props., calc. 0=8801
 films, optical properties, effect of lattice defects 0=4391
 films, optical props., resonance phenom. 2=16800
 films, optical props., visible and near i.r. 2=18798
 films, optical resonance phenomena 2=8476-7
 films, optical scatt. 2=13455
 film orientation on Cu substrate, orientation 1=10282
 films, oxidation by heating or irradiat. 2=12959
 films, oxidation by ionizing γ -radiation 2=8931
 films, photoemission rel. to photon energy 2=22251
 films, plasma oscillations, light radiation 1=7568
 films, plasma resonance absorpt. 3=10634
 films, recrystallization time, tensile strength, thickness var. 4=23571
 films, reflection and transmission spectra, rel. to heating 4=1748
 films on rocksalt, epitaxial growth 2=16996
 films on rocksalt, formation conditions 1=10243
 films, with SiO₂, LiF, Cu₂O, Fe admixtures, disorder, structure and resistance 0=3283
 films, on silver-coated mica, double-positioning structure 3=1376
 films, single-crystal, prep. method 3=1367
 films, sputtering inside electron microscope 3=451
 films, sticking coeff., optical transmission, and oxidation 4=20801
 films, structure and elec. resistance 4=13674
 films, structure rel. to speed of formation 3=20923
 films, substructure analysis 2=23937
 films, superposed on Sn films, superconductivity transition temp. depression 4=24514
 film, temperature rise, rel. to electron irradiat. 3=17807
 films, thickness meas. 0=4979
 films, transparency increase by blooming 2=7378
 films, transverse electric field effects 3=15541
 film, vacuum deposition, helium flush technique 1=7883
 films, vacuum evap. from TiC 2=6850
 films, very thin, absorpt. 0.2-0.7 μ 4=22867
 films, work function 2=9612
 films, 35-50 μ , strength, tensile, 100-300°C 3=6783
 films <100 Å, elec. props. 2=14496
 films, 400 Å thick, electron energy losses 2=12411
 fluorescent yield of L-shell 4=3774
 foils condensed on LiF and mica, epitaxy and twinning 1=15011
 foils, optical emission due to charged particles 2=14751
 foils, polycrystalline, electron diffraction obs. 4=7677
 foils prep., as isotope targets 2=17978
 foils, rare gas loading and evolution 1=17551
 foil, secondary electron emission, energy distrib. 0=5342
 foil, speed of evap. in vacuum furnace 4=5472
 in friction with Ag, Ni and Cu, effect of chemical affinity on adhesion 4=10369
 friction in reciprocating sliding, low values 0=3165
 γ -ray ang. correl. of In¹¹¹ impurities, effects of cold work and irradiat. 4=22463
 glide, thermally activated, and strain hardening 0=21114
 grain boundary and vol. diffusion in sintering 4=28482
 grain boundary width 1=15115

 sputtering, by Ar^+ ions, 30-170 keV 4=22644
 sputtering, cathodic, single and polycrystalline 0=3815
 sputtering by 45 keV ions, collection formula 2=3096
 sputtering by inert-gas ions 1=13136
 sputtering by ions of inert gases 4=4105
 sputtering, Kr^+ , Ar^+ , Ne^+ yields meas. 2=11724
 sputtering, by light ions 0=10989
 sputtering yields for 1-10 keV Ar^+ ions 4=4103
 stacking fault energy, from plastic deform. 3=15501
 stacking fault widths in filings, obs. 1=17546
 stearic acid monolayers on, orientation 0=10372
 strain energy of dislocations 1=11190
 strain, u. s.-produced, 4.2°K, calorimetric meas. 4=10356
 strength, impurity, temp. and time depend. 1=12599
 stress-strain meas., at various temps. 0=3144
 striation formation, on crystals heated in air 0=18328
 surface energy rel. to crystallographic orientation 4=15816
 surface free energy, anisotropy, effect of metallic
 impurities and temp. 4=17373
 surface free energy, orientation dependence 0=17865
 surface mobility on MoS_2 and graphite, mechanism 4=10602
 surface self-diffusion and faceting 3=25292
 surface tension in solid state 4=10601
 tarnishing, nucleation of sulphide patches 2=6846
 texture transition rel. to stacking fault
 frequency 1=10279
 thermal conductivity 1=920
 thermal conductivity, phonon and electron components
 separation methods 3=12930
 thermal diffusivity, capacity and conductivity, meas. by
 flash method 1=13006
 thermal expansion, effect of annealing 2=20938
 thermal expansion, lattice const. changes, from Bradburn-
 Fürth eqn. of state 4=20219
 thermal expansion, 20°-1200°K 3=17663
 thermal lattice defects, and energy content 0=6038
 thermal vacancies, formation energy, specific
 resist. 1=11192
 thermoelectric power at low temp., effect of
 dissolved Fe 1=17815
 thin evaporated films, conductivity anomalies after
 tempering 1=6561
 thin film, scatt. factor meas. 4=22837
 thin films, energy loss of 25 keV electrons 2=22267
 thin films, influence of formation rate on optical
 properties 1=7701
 thin films, optical constants, rel. to heat treatment 3=13146
 thin films, optical consts. theory 4=22868
 thin films, optical properties and structure 1=7700
 thin films, reflection and transmission coefficients
 at oblique incidence 1=10089
 thin films, structure and optical props. 1=19939
 thin foils, electron scatt. intensities 3=1302
 thin foils, transition radiation from 40 keV electron
 beam 4=22552
 thin layers, characteristic electron beam energy
 losses 1=10000
 thin layers, photoelectron emission velocity distrib. 3=9835
 transition radiation from foils, temp. and thickness
 depend. 4=22551
 transport properties, Fermi surfaces 1=8893
 twinning diagram interpretation, of layers on NaCl 1=11529
 twinning films (400 Å) evaporated 1=11530
 u.s. pulse propagation, 62 Mc/s 3=10592
 u.v. radiation, on H ion impact 4=20487
 u.v. reflection, effect of angle of incidence 0=4394-5
 vacancies, formation energy 2=6316, 20999
 vacancies, formation energy and conc. 1=7575
 vacancies, migration energy and activ. volume,
 model 4=12730
 vacancies, properties 3=22738
 vacancies, quenched-in, interaction with O
 impurity 3=22747
 vacancies, quenching and annealing 2=10646
 vacancies, quenching, elec. cond. increases 0=17954
 vacancy quenching by elec. sparks 2=8204, 10378
 vacancies, quenching and movement, thermo-e.m.f.
 study 0=17955
 vacancies, and vacancy aggregates, annealing in quenched
 specimens 4=12734
 vapour, ionization by electron impact 0=14967

Silver—contd

- vapour press., at high temp., using recording micro-balance 4=24454
 vapour pressure, determ. from evap. rate 2=11537
 vapour pressure, effect of oxygen 4=5471
 vapour pressure, 1268 to 1462°K, calc. 4=27384
 vibration spectrum and heat capacities, model 2=23051
 void growth kinetics, strained Ag 2=20997
 whiskers, elec. resistance, rel. to temperature 4=4124
 whiskers, growth from AgCl liquid 0=18320
 whiskers growth, influence of elec. field 1=20447
 wire, optical props. down to 2000 Å diam. 3=13159
 wires, internal friction peaks, at low temps. 3=18166
 work function, effect of adsorption of H, air, and dipole moment 4=11683
 work function, effect of air and H₂ 4=14741
 work hardening meas. by torsion to large strains 4=7389
 Young's modulus, change and recovery at low temp. 2=10744
 Young's modulus, decrease after deformation and recovery 4=15703
 X-ray continuous spectrum, Ohlin structure meas. 4=4242
 X-ray diffrn. examin. of unit cell contraction 3=16062
 X-ray diffraction intensities, effect of temp. 1=4042
 X-ray emission spectrum, N_{II,III} intensity distrib. 1=3514
 X-ray line broadening from polished surface, Fourier analysis 1=11557
 X-ray spectrum, L satellites, confirmation of theory 4=28708
 zeta potential 2=1381
 Ag, absorption, 2000-4000 Å, Walter, Rasigni relations 4=1749
 Ag films, crystal structure, atomic, by electron diffr., variable filter technique 4=2060
 p-Ag, influence on nuclear emulsion grain dia. 2=5551
 Ag⁺ ion conduction in quartz 1=11268
 Ag and Cu double layers on rock salt, prep. 2=19109
 Ag I, $\lambda\lambda$ 3281, 3383, absolute oscillator strength 4=22302
 Ag I resonance doublets, absolute oscillator strengths 4=6485
 in β -AgMg, self-diffusion 4=15494
 α -Ag₂Te_{1-x}S_{1-x}, i.r. absorption 1=10107
 in Cds, as impurity, and crystal imperfections 4=6821
 Co diffusion, rel. to temp. 1=14317
 in Ge, impurity levels 0=6107
 O₂ in, energy of solution, pulse calorimetric study 2=12928
 O₂ in, heat of solution 2=20999
 Xe diffusion, 500-800°C 0=15868

Silver compounds

- alloys, dilute, electric field gradients, rel. to valence and size effects 3=22718
 alloys, lattice thermal cond., low temps. 2=23085
 alloys, plastically deformed, stacking faults 2=8230
 alloys, superconductivity 3=16873
 binary alloys with rare-earth metals, structure 3=18336
 halide crystals, thermal expansion 1=918
 halides, spectra, absorption of photochemically coloured 1=8985
 halides, zone refining 1=4029
 Hunsler, Ag-based, magnetic properties 0=21053
 microscopy, u.v. transmission, Ag alloys 3=23523
 oxide surfaces, catalytic efficiency 1=7913
 solid solns., Knight shifts, charge density at Ag nuclei 2=4286
 Ag alloys, dilute, elec. field gradients, ang. correl. meas. 4=22458
 Ag antimony telluride, prep., and elec. props. 4=22722
 Ag azide, elec. conduction 4=17493
 Ag-base alloys, stacking faults rel. to solute 3=2811
 Ag-base solid solutions, internal friction 2=21398
 Ag-base solid solutions, stacking faults 2=14449
 Ag-based, comp., rel. to energy-band structure 1=17460
 Ag binary terminal solid solns., elec. props. 4=22685
 Ag complex cyanides, Raman spectra in solns., CN stretching bands 0=1670
 Ag(II) compounds, paramagnetic resonance 2=1166
 Ag cyanamide, slow surface decomposition 2=19144
 Ag cyanide anions, Raman spectra 1=14036
 Ag dilute alloys, elec. field gradients, by Cd¹¹¹ γ -ray ang. correl. 1=3588
 Ag, dilute, anisotropic relaxation and Hall coeff. 0=20726
 Ag, dilute, Hall effect, anisotropic relaxation times 0=15895

Silver compounds—contd

- Ag, dilute, lattice thermal conductivity 0=20754
 Ag, dilute, thermoelectric power 1=1116
 Ag, dislocation density, after deformation 1=12386
 Ag electrolytes, heats of transfer of Ag ions 1=11624
 Ag fulminate, crystal structure 0=3238
 Ag germanide, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
 Ag halide, absorpt. spectrum, fine struct. meas. 4=22890
 Ag halide crystals, defect electron distrib. with environmental halogen 2=16644
 Ag halide dispersions, particle size change. 3=25839
 Ag halide films, rapid prep. 0=14081
 Ag halide grains, crystal imperfect., X-ray diffr. exam. 4=12721
 Ag halide phosphors, luminescence rel. to i.r. irradiation 2=16850, 18865
 Ag halide photographic materials, photocond. meas. 10¹⁰ c/s 4=21324
 Ag halides, absorption edges rel. to press., temp. 2=2229
 Ag halides, absorption spectra analysis, exciton structure 1=945
 Ag halides, adsorption of water vapour 3=1381
 Ag halides, with Ag sulphide, selenide, telluride, e.s.r. 0=11949
 Ag halides, anion diffusion at low temp., impurity effects 1=2391
 Ag halides containing bivalent anions, e.s.r. 1=8057
 Ag halides, correl. btwn extinction bands and plasma resonance 0=7876
 Ag halides, defect electrons, absorption bands, spectral location 1=2397
 Ag halides, doped, dipole relaxation 0=1704
 Ag halides, elastic moduli, calc. from lattice vibration theory 1=2370
 Ag halides, electron conductivity 0=20871
 Ag halides, F and F' centres 2=13466
 Ag halides, Frenkel defects diffusion 2=16645
 Ag halides, Frenkel pairs, recomb. 1=3658
 Ag halides, heat of fusion determination 0=14901
 Ag halides with impurities, dielectric loss 2=14598
 Ag halides, impurity anions, absorption band positions 0=16049
 Ag halides, increase of content in nuclear emulsions 0=12734
 Ag halides, ionic motion, interstitial mechanism 2=3931
 Ag halides, ionic transport processes 3=13007
 Ag halides, irradiation, Ag nuclei growth 0=3663
 Ag halides, latent image formation by light and electrons 0=12506
 Ag halides, mixed, exciton spectra 2=18839
 Ag halides, mixed ternary crystals, phase equil. 2=10895
 Ag halides, mobile defects, reaction time 1=3681
 Ag halides, Ni²⁺ absorption spectra 3=6654
 Ag halides, photochemistry interchangeability derivations, electronic mechanism 4=23670
 Ag halides, photographic developability 0=4292
 Ag halides, photographic image formation, trapping of positive holes 1=9490
 Ag halides, polaron study, electron mobility 1=949
 Ag halides, precipitation reactions in crystals 1=2556
 Ag halides, spontaneous formation of Ag nuclei under light 2=22068
 Ag halides, sulphide doped, ionic cond. 2=10495
 Ag halides, thermoelectric power 1=6185
 Ag iodide, Debye temp., X-ray determ. 4=28373
 Ag, Knight shift 0=16186
 Ag oxide, i.r. absorption 2=701
 Ag⁺, quadrupole antishielding factor 3=12772
 Ag-rich, thermal conductivity 1=920
 Ag sulphide group semicond., theory of mixed cond. 2=2171
 Ag selenide powders, thermoelectric figure of merit 4=7088
 Ag telluride, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
 Ag-Al, ageing, effect of small additions of Cu, Mg, Zn 1=15148
 Ag-Al alloys, phonon scattering on Pt atoms 2=23048
 Ag-Al, faulting, effects on thermal-mechanical treatment 2=8232

Silver compounds—contd

- Ag—Al, films, precipitation during ageing 0=21238
 Ag—Al, γ' phase platelets, thickness distrib. by X-ray scatt. 1=15121
 Ag—Al, Guinier—Preston zones, structure 0=18392
 Ag—Al, lattice spacings and stability 0=16314
 Ag—Al, liquid, X-ray structure study 1=12861
 Ag—Al, ordering in hexagonal ζ -phase 3=6862-3
 Ag—Al, single crystals, plastic deformation, temp. depend. 0=21133
 Ag—Al, stacking faults 1=19797
 Ag—Al, strength and hardening mechanism 0=4554
 Ag—Al, strength, impurity, temp. and time depend. 1=12599
 Ag—Al, strength of zone-hardened alloys 0=21139
 Ag₂—Al, slip, prismatic, mechanism 4=30783
 Ag—As, lattice spacing and electronic structure 1=20571
 Ag—As—S, photoelectric effect 1=5025
 AgAsS₂, crystal structure, atomic, Patterson synthesis 4=15792
 Ag—Au, absolute reflectivity, for 1.8–5.0 eV 4=7158
 Ag—10% Au alloy, compression tests 4=30764
 Ag—Au, Bordoni effect 1=6448
 Ag—Au, cold worked, stored energy, work softening 0=16349
 AgAu, colour change on plastic deformation 3=10962
 Ag—Au, Hall effect, < 15° K 1=7622
 Ag—Au solid solutions, self-diffusion meas. 3=6538
 Ag—Au solid solutions, Zener relaxation, rel. to concentration 3=23299
 Ag—Au, thermal vacancies, formation energy, specific resist. 1=11192
 Ag + Bi alloys, liquid, vapour pressure 3=14422
 Ag—Bi alloys, thermodynamic props. meas. 4=10437
 AgBr, abrasion on emery paper 2=800
 AgBr, absorption const. rel. to impurity doping 2=2228
 AgBr, absorption edge rel. to compression 2=10591
 AgBr, absorption edge fine structure 2=8519
 AgBr, absorption spectrum, effect of ion impurities 2=2226
 AgBr, absorption spectra rel. to Se, Te, S impurity ions 1=19968
 AgBr, Ag diffusion, press. and temp. depend. 1=989
 AgBr, α -particle evaporation by 1 and 2 GeV protons 4=25401
 AgBr, anti-colour centre, e.s.r. absorption 3=6542
 AgBr, Bi-doped, photographic process meas. 4=18440
 AgBr, Br^{79,81} n.m.r., effect of lattice defects 1=3947
 AgBr, Br vacancy, activation energy 1=3681
 AgBr, brominated hydrosols as nuclear emulsions 1=7179
 AgBr, Cd- and S-doped, fluorescence 2=6605
 AgBr, CdS-doped, optical props. 3=18006
 AgBr, charged dislocations, motion 2=14442
 AgBr, crystal size from diffraction profiles 2=4503
 AgBr, crystallization, effect on habit of soln. conditions 4=10479
 AgBr crystals, displacement of photoelectrons and positive holes 2=20961
 AgBr crystals, substructures 1=15073
 AgBr crystals, u.s. field effect on elec. cond. 4=22767
 AgBr, cyanine dye-sensitized, absorption signal, photo-induced 2=21374
 AgBr, cyclotron resonance 2=23140
 AgBr, defect electron transport number 3=6487
 AgBr, defect equilib. theory 2=3952
 AgBr, dielec. const. at 24 kMc/s, 30–400°C, Debye—Hückel clouds 1=12469
 AgBr, diffusion of Cd 0=9916
 AgBr, dislocations, with (100) Burgers vectors 0=20816
 AgBr, dislocations, interaction 1=3670
 AgBr, with divalent impurities, absorption spectra 1=1166
 AgBr, e.s.r. of Ni²⁺, rel. to incorporation 4=4412
 AgBr, e.s.r., rel. to photographic process 2=16933
 AgBr, effect of light on paramagnetic resonance 0=6415
 AgBr, elec. cond. and photocond. effect of Br₂ and Cl₂ gases 1=3727
 AgBr—electrolyte systems, photovoltaic effects 2=16758
 AgBr, electron Hall mobility down to 4° K 2=23472
 AgBr, electron mobility and scatt. processes at low-temp. 0=15994
 AgBr emulsions, sensitization to radiations 2=17659
 AgBr emulsions, tabular grains, lattice rotations 2=602
 AgBr, exciton dissociation and latent-image formation 0=14861

Silver compounds—contd

- AgBr emulsions, gelatinous, crystallization, tabular, var. pH 4=10478
 AgBr emulsions, sulphur sensitization, high-intensity reciprocity failure 4=14414
 AgBr, F-centres, continuum model 4=9999
 AgBr, fund. absorption of light 2=12585, 14660
 AgBr, generation of surface dislocation loop 0=20807
 AgBr, grain size in photogr. emulsions 0=12737
 AgBr, grains, dark conductivity 0=1616
 AgBr, grains, from emulsions, photoelectronic carriers 0=1617
 AgBr, Hall mobility of holes 0=6955
 AgBr, Hall mobility of holes 3=13080
 AgBr, heat of solution, solubility, in NaNO₃, KNO₃ or mixtures, e.m.f. meas. 4=14136
 AgBr, hole mobility, and photographic process 4=4010
 AgBr, holes, photoexcited decay 4=30542
 AgBr, luminescence, i.r. and Hg line influence 2=14731
 AgBr, magnetoconductivity theory 3=15464
 AgBr, magnetoresist. and cond. band structure 3=8529
 AgBr microcrystals in nuclear emulsion, ion adsorption 2=5555
 AgBr microcrystals, surface struct. and epitaxy 4=23313
 AgBr micro crystals, twinning and growth 4=13519
 AgBr monodisperse sols, light scattering 4=15852
 AgBr, n.q.r., spin—lattice relax. time 1=3948
 AgBr, Ni-doped, dielectric loss-factor meas. 20°–200° K 3=8554
 AgBr, Ni²⁺ paramag. reson. and relax., liquid H temps. 3=13307
 AgBr in nuclear emulsions influence on μ^+ meson decay 1=16836
 AgBr particles, scattering, light, ang. var. 4=2855
 AgBr, photochemical behaviour, with divalent ion impurities 2=2227
 AgBr, photoconductivity 2=23471
 AgBr, photoconductivity 3=6636
 AgBr, photoconductivity, electron mobility and lifetime 2=4070
 AgBr, photoconductivity rel. to illumination, 77° K 2=23470
 AgBr, photoconductivity and photo-e.m.f. 2=21198
 AgBr, photoconductivity and photo-e.m.f. 3=2969
 AgBr, photographic emulsion, radiation response, ionizing 3=14390
 AgBr, polaron mass, polaron theory of electron mobility rel. to expt. 3=2768
 AgBr, precipitate ageing, theory 2=8934
 AgBr precipitates, adsorption of H⁺ and OH⁻ ions 3=5165
 AgBr, print-out effect, defect electron behaviour 3=3406
 AgBr, reaction with Br₂, study using defect electron cond. 3=6912
 AgBr, replicas for electron microscopy 0=14092
 AgBr, S doped, n.m.r. 2=16940
 AgBr, solid, ion and electron conduction 0=4322
 AgBr sols, Tyndall spectra, higher order 3=13629
 AgBr, surface potential, temp. depend. 0=20961
 AgBr suspensions, monodisperse, turbidity 2=17103
 AgBr, texture after plastic deformation 2=14927
 AgBr, thin sheets, prep. by capillarity 4=15763
 AgBr, transition-metal-doped, dielec. loss factor 4=12963
 AgBr, twinning 2=16981
 AgBr, twinning, electron micrograph study 1=2519
 AgBr, u.v. irradiated, e.s.r. detection of colloidal particles 4=26408
 AgBr, vacancy motion, heat of transport calc. 0=13497
 AgBr, zeta potential 2=1381
 AgBr—AgCl mixed crystals, absorption tail 3=3020
 AgBr:Ag₂S, luminescence, pressure depend. 0=4449
 AgBr—KCl fused solution, electrical conductivity and cryometry 1=15899
 AgBr—LiCl fused solution, electrical conductivity and cryometry 1=15899
 AgBr—NaCl fused solution, electrical conductivity and cryometry 1=15899
 AgBr:Ni, bleaching processes 3=13187
 AgBr, S doped, X-irradiated, optical absorption bands 1=19969
 Ag₃Ca₅, crystal structure 2=10883
 AgCd, accelerated ordering and hardening by thermal cycling 4=23289
 AgCd alloy, crystal structure 3=13501

Silver compounds—contd

- Ag-Cd alloys, α -phase, Zener relaxation 4=28981
 Ag-Cd alloys, annealing spectrum of cold-worked specimens 4=23290
 Ag-Cd alloys, α -solid soln. range, void formation 4=29170
 α -Ag-Cd alloys, diffusion, anelastic meas. 2=3945
 α -Ag-Cd alloys, lattice expansion and Debye temp. 2=12389
 AgCd, β' , b.c.c. \rightarrow h.c.p. transformation 0=18373
 Ag-Cd, diffusion couple with Ag, tracer diffusion study 0=1606
 Ag-Cd, dislocation damping, heat treatment 2=15062
 Ag-Cd, ϵ and η phases, lattice spacings 3=6856
 Ag-Cd films, electron diffr. study 2=10910
 Ag-Cd, four phases, thermodyn. props. 3=13522
 Ag-Cd, hardness rel. to composition 1=14923
 Ag-Cd, lattice spacing and electronic structure 1=20571
 Ag-Cd, lattice spacings 3=3313
 Ag-Cd, n. m. r. shifts and line widths 0=21084
 AgCd, order-disorder transformations 3=3328
 Ag-Cd, phase boundaries and transformations, X-ray study 1=15118-
 β -AgCd, spectral reflectivity rel. to temp. 2=18789
 Ag-Cd, thermal vacancies, formation energy, specific resist. 1=11192
 Ag-Cd, thin films, structure transformation 0=12045
 AgCd-AuCd β -system, phase transforms. 2=17040
 AgCl, A^+ bombard., catalytic activity 0=4709
 AgCl, abrasion on emery paper 2=800
 AgCl, absolute specular reflectance meas. at low temps. 4=11339
 AgCl, absorption edge fine structure 2=8519
 AgCl, AgBr, grown from melt, impurity distrib. 2=12426
 AgCl, bleaching of contained colloidal Ag 0=9913
 AgCl, charged dislocations, motion 2=14442
 AgCl, Co^{2+} and Ni^{2+} impurities, props. 3=15487-8
 AgCl, cold work and ductile-brittle transition 4=23204
 AgCl, colloidal Ag, investig. by photoelectric properties 4=1688
 AgCl, containing Cu chlorides, props. 0=15847
 AgCl core aerosol, preparation and scattering of light 1=11637
 AgCl crystal lattice const., effect of strong u. v. illumination 4=4622
 AgCl, crystal structure 4=20765
 AgCl crystals, effect of recrystallization on temp. dependence of photocurrent 1=3792
 AgCl crystals, luminescent decay 1=14634
 AgCl crystals, for particle track visualization 3=5906
 AgCl crystals, particle tracks inside 3=7754
 AgCl crystals, u. v. absorpt. 3=929
 AgCl, with CuCl traces, photographic processes 0=19465
 AgCl, Cu-doped, rate of volume photolysis 3=11358
 AgCl, Cu^+ doped, trapping of photoproduced holes 4=25888
 AgCl, cyclotron resonance, irradiation effects 0=1547
 AgCl, Dember effect (crystalline photoeffect) 0=20941
 AgCl, Dember effect in u. v., rel. to temp. 3=2948
 AgCl, diffusion of Cl^{35} , temp. var. 4=9996
 AgCl, dislocation decoration in large crystals at room temp. 1=3679
 AgCl dislocation densities rel. to pressure 1=17532
 AgCl, dislocation distribution, plastically bent samples 4=22601
 AgCl, dislocation-impurity interactions and strain aging 3=17718
 AgCl, dislocations, X-ray diffract. topography 0=1587
 AgCl, with divalent impurities, absorption and photochem. response 1=5046
 AgCl, ductile-brittle transitions 0=21145
 AgCl, effect of i. r. illumination on luminescence 2=713
 AgCl, elec. cond., effect of Cl_2 gas 1=3727
 AgCl electrode, photo-impedance 1=14521
 AgCl, electron drift mobility, 70-350°K 3=6486
 AgCl, electron Hall mobility down to 4°K 2=23472
 AgCl, electron mobility in high elec. fields 3=8387
 AgCl, electron trapping centres, nature 3=20521
 AgCl, etch pit formation, rel. to face orientation 4=9966
 AgCl, Fe^{3+} e. s. r. 4=13324
 AgCl, Frenkel defects and thermal expansion 3=10604
 AgCl, fund. absorption of light 2=12585, 14660
 AgCl, heat of solution in molten KNO_3 3=14153
 AgCl, high-press. X-ray diffr. study 2=8811
 AgCl, hole migration, after air and O_2 annealing 1=1110

Silver compounds—contd

- AgCl, in i. r. optics 1=1814
 AgCl, impurity Cu ions in solid soln., optical props. 2=4136
 AgCl, internal friction 0=13908
 AgCl, internal friction, effect of u. v. radiation 2=18984, 23737
 AgCl, internal friction, plastic deform., temp. depend. 0=1848
 AgCl, ionic cond., point defect content 2=3982
 AgCl, kink bonds, internal stresses 2=23762
 AgCl, lattice distortion, rel. to u. v. irradi., 25°C 4=9953
 AgCl, luminescence activation 2=23600
 AgCl, luminescence, blue-green band, Stark effect 3=18031
 AgCl, luminescence, colour change at liquid air temp. 4=7187
 AgCl, luminescence, rel. to d. c. pulses, at liq. N temps. 2=23599
 AgCl, luminescence decay modes, kinetics 1=3864
 AgCl, luminescence, rel. to divalent anion and cation dopants 3=23106
 AgCl, luminescence flash, damping kinetics meas. 4=13083
 AgCl, luminescence growth kinetics meas. 3=18033
 AgCl, luminescence, i. r. and Hg line influence 2=14731
 AgCl, luminescence, intensity, excitation intensity depend. 2=18866
 AgCl, luminescence at low temp. 1=20010
 AgCl, luminescence when pure and doped 3=25486
 AgCl, luminescence, X and β induced 3=6671
 AgCl₂, luminescence, doped with CdCl₂ and FeCl₃ 1=14635
 AgCl, magnetoconductivity theory 3=15464
 AgCl : Mn, luminescence of red Mn bands 3=20522
 AgCl, molten, electrochem. polariz. voltage 2=12971
 AgCl, molten, luminescence 4=11204
 AgCl in $NaNO_3$ - KNO_3 eutectic mixture, heat of precipitation at 320°C 4=16282
 AgCl, Ni^{2+} paramag. reson. and relax., liquid H temps. 3=13307
 AgCl, normal and deformed monocrystals, luminescence, -180°C 0=13703
 AgCl with 0.5 mole % TiCl₃, luminescence 1=20008
 AgCl, phonon dispersion calc. on shell model 2=12378
 AgCl phosphors, localization levels, de-excitation 2=18864
 AgCl, photoconductivity and photo-e. m. f. 2=21198
 AgCl, photoconductivity and photo-e. m. f. 3=2969
 AgCl, photoconductivity under pulsed X-ray irradi., 80-280°K 1=3793
 AgCl, photoconductivity and trapping at low temp. in doped crystals 1=7676
 AgCl, photocurrent, effect of impurities 2=23473
 AgCl, photoelectret state and energy levels 2=21224
 AgCl, photoelectret state and energy levels 3=2964
 AgCl, photoelectret state formation 3=15623
 AgCl, point defects 3=12966
 AgCl, polaron mass, polaron theory of electron mobility rel. to expt. 3=2768
 AgCl, polycryst., wet with aq. soln., fracture charact. 4=28980
 AgCl, polygonization 3=15502
 AgCl, precipitation kinetics meas. 3=18270
 AgCl, reaction with Cl_2 , study using defect electron cond. 3=6912
 AgCl, reflectivity (λ 150-3750Å) 1=3814
 AgCl, reverse bending 0=21110
 AgCl, rolled plates, etching, dislocations 1=4016
 AgCl seal use in Cs vapour devices 4=27236
 AgCl, sensitized crystals at -253°C, photochemical phenomena 0=10356
 AgCl, single crystals, diffusion of Ag^+ , Cl^- and Cd^{2+} 0=20842
 AgCl, single crystals, with internal print-out, annealing 0=6343
 AgCl, single crystals, Mn^{2+} paramag. resonance 2=10704
 AgCl single crystals, trapping origin for luminescence 1=20009
 AgCl, strength, effect of impurities 0=21097
 AgCl, strength, temp.-time dependence 0=21135
 AgCl, stress release in plastic deformation, by annealing 1=11505
 AgCl, surface potential rel. to temp. 1=17827
 AgCl, tensile strength dependence on load duration 1=12600

Silver compounds—contd

- AgCl, thermal expansion up to 878°C, X-ray meas. 4=20223
 AgCl, thermoelec. power, doped with CuCl, calc. 1=1113
 AgCl, thermoelectric power 0=20949
 AgCl, thin sheets, prep. by capillarity 4=15763
 AgCl, transition-metal-doped, dielec. loss factor 4=12963
 AgCl, trapping level spectrum, thermal effects 3=8397
 AgCl, u.v. refl. spectrum at 20°K 3=4959
 AgCl, vacuum outgassing props. 3=18870
 AgCl, vibration damping, due to u.v. irradiation 1=20316
 AgCl and AgCl: Cd, X-ray luminescence 2=6604
 AgCl-Ag₂S molten mixtures, elec. cond., thermodynamic and structural props. 4=24235-6
 AgCl:I, i.r.-stimulated luminescence flash 2=10620
 AgCl-KBr fused solution, electrical conductivity and cryometry 1=15899
 AgCl-LiBr fused solution, electrical conductivity and cryometry 1=15899
 AgCl-NaBr fused solution, electrical conductivity and cryometry 1=15899
 AgClO₄-benzene complex, mol. motion, n.m.r. 4=1901
 AgClO₃, liq., i.r. refl. spectrum 2=14275
 AgCl:Ti, luminescence temp. depend. 3=18032
 Ag₂CN₂, thermal and fission-fragment decomposition 2=854
 Ag₂C₂N₂O₈, crystal structure 3=13478
 Ag₂C₂O₄, permittivity and dielec. losses, at low frequencies, 15°C 4=1854
 Ag-Cs photocathodes, fatigue effects 1=17805
 Ag-Cu, diffusion of Ag 1=986
 Ag-Cu system, phase diagram 2=15055
 Ag-Cu, thermal vacancies, formation energy, specific resist. 1=11192
 AgD, near u.v. emission spectrum 2=6175
 AgF, n.m.r. of Ag¹⁰⁹ 0=4528
 AgF, spectrum, near u.v. 3=12832
 AgFeO₂, atomic crystal structure 4=15793
 AgFeTe₂, existence of two separate phases 1=10049
 AgFeTe₂, semiconducting compound 4=10071
 AgFeTe₂, "semiconducting compound", constitution 2=14562
 AgFeTe₂, structure, semicond. props. 0=15961
 Ag-Ga, lattice spacing and electronic structure 1=20571
 Ag-Ge, lattice parameters 2=2400
 AgGeSbSe, ternary and quaternary systems as semiconductors 1=10040
 AgH, electronic-band spectra, by exploding wire method 4=25635
 AgH, electronic spectrum and vibr.-rot. interact. 2=20820
 Ag-Hg, lattice spacing and electronic structure 1=20571
 Ag_{0.438}Hg_{0.562}, superconductive Hume-Rothery phase 4=18601
 Ag₂HgI₄, elec. conductivity, press. depend. 4=26105
 AgI, activation energies for diffusion 1=12398
 AgI, adsorption of water vapour 4=23606
 AgI aerosol, dispersed state 2=23976
 AgI, aerosols, phase changes 3=1402
 AgI, anomalous absorption at critical thickness 2=689
 AgI, approach to metallic state 3=17812
 AgI aqueous solns., ice nucleation 2=21490
 AgI, band gap, rel. to temp. and α - β transition 2=23544
 AgI, cation mobility and thermal contraction 1=12357
 AgI, cold-worked, strain investigation by X-ray diffr. 4=30784
 AgI, crystal struct., atomic, hexagonal 4=17817
 AgI, diffusion of Ag at high pressure 2=18605
 AgI, exciton, absorpt. and refl. spectra 3=4975
 AgI films, prep. and optical props. 1=17892
 AgI, heat of solution, solubility, in NaNO₃, KNO₃ or mixtures, e.m.f. meas. 4=14136
 AgI, hexagonal, crystal structure 3=5102
 AgI, hexagonal, structure 3=18310
 AgI, high press. X-ray crystallography 2=23834
 AgI, ice growth on 0=6335
 AgI, low-cubic to hexagonal phase transformation 4=23292
 AgI, photoconductivity and photo-e.m.f. 2=21198
 AgI, photoconductivity and photo-e.m.f. 3=2969
 AgI, photoelectric emission 0=15055
 AgI, use in rain stimulation, I¹³¹ study 1=4109
 AgI soln. system, electrical double layer, ionic charge compenents, calc. 3=18454

Silver compounds—contd

- AgI, thermal expansion, 4. 2°-300°K, meas. and model 4=6751
 γ -AgI thin films, in refr. index 4=28710
 β -AgI, unit cell, least squares calc., refl. weighing 4=10447
 AgI-KI-H₂O, water adsorption 3=23522
 Ag-In, anelastic piezoresistance, stress-induced ordering 4=12847
 Ag-In, dilute, thermal cond. at low temp. 0=6021
 Ag-In films, γ , ϵ and ϕ phases, by electron diffr. 4=2002
 Ag-In, lattice spacing and electronic structure 1=20571
 Ag-In, thermal vacancies, formation energy, specific resist. 1=11192
 Ag-In-Cd control rod in pressurized water reactors 3=6336
 Ag-In-Ga system invest. 2=4438
 AgInSe₂, semiconductor, prep. and props. 3=864
 AgIn₃Te₅, semiconducting, cond., elec. and thermal, Hall effect, Seebeck coeff. 4=26060
 AgInTe₂ semiconductor, prep. and props. 3=864
 AgInTe₂, solid solns. with HgTe and CdTe, elec. props. 3=876
 AgLa ferrite, prep., crystal structure, mag. props. 4=1844
 Ag₃La_{0.8}Er_{0.2}, magnetic cooling by adiabatic demagnetization 4=16305
 Ag-Li, stacking faults 3=15499
 β -AgMg, jog theory of work hardening 4=7456
 β -AgMg, low-temp. tensile behaviour 4=23205
 AgMg, melting point depression due to Si 4=8502
 Ag-Mg oxide, cold worked, structure 2=6817
 β -AgMg, self-diffusion of Ag 4=15494
 AgMg, slip, low temp., rate-controlling mechanism 4=30785
 Ag-Mg-Sn, theory of order-disorder transformations 0=16336
 Ag-Mn alloys, electron scattering, anomalous, and analogy with Ramsauer effect 4=17396
 Ag-Mn alloys, lattice thermal cond. at low temp. 2=14396
 Ag-Mn alloys, Lorenz number in mag. field 2=14395
 Ag-Mn alloys, Lorenz number and thermal cond. 2=6294
 Ag-Mn alloys, paramag. susceptibility 3=8643
 Ag-Mn, dilute, thermal cond. at low temp. 0=6021
 Ag-Mn, exchange anisotropy 0=10121
 Ag-Mn, exo-electron emission 0=2383
 Ag-Mn, ferromag.-antiferromag. model 3=20585
 Ag-Mn, ferromag.-antiferromag. props. 2=2275
 Ag-Mn, Hall effect, < 15°K 1=7622
 Ag-Mn, inelastic scattering of electrons 1=14243
 Ag-Mn, low temperature anomalous conductivity and Lorenz parameter 1=11257
 Ag-Mn, mag. susceptibility 0=10100
 Ag-Mn, 1.4-20°K heat capacity 0=9859
 Ag-Mn, 1.3-20°K specific ht. in mag. fields 0=18408
 Ag-Mn-Sn, ζ -phase, lattice spacings and effective valancies 2=12935
 AgN₃, unit cell dimensions 3=11265
 AgNO₃-alkali nitrate, fused, heat of mixing 1=12869
 AgNO₃, aq. soln., u.s. velocity anomaly 1=15871
 AgNO₃, crystal structure, re-determ. 2=10893
 AgNO₃, effect on u.v. absorption 0=10038
 AgNO₃, fused, thermoelectric power 3=9477
 AgNO₃, liquid, i.r. reflection spectrum 2=7214
 AgNO₃, m.p. and volume of fusion, press. depend. up to 10⁶ atm 3=24110
 AgNO₃, molten, Raman spectra giving nitrate ion structure 4=15355
 AgNO₃, molten, u.s. absorption and vel. 0=16696
 AgNO₃-polyacrylonitrile complex, i.r. spectra 4=12509
 AgNO₃ soln. u.s. velocity 1=18407
 AgNO₃, specific heat, 300-438°K, 433°K transition 4=15430
 AgNO₃, structure change, kinetics of phase growth 3=13401
 AgNO₃, thermoelectric liquid cell, e.m.f. temp. var. 4=15846
 AgNO₃, transition I \rightleftharpoons II, energy meas. 2=16975
 AgNO₃-AgBr fused solution, electrical conductivity and cryometry 1=15899
 AgNO₃-Ba(NO₃)₂-Ca(NO₃)₂-Mg(NO₃)₂, density and electrical conductivity 0=64
 AgNO₃-LiNO₃ melt, thermal diffusion 2=21902
 AgNO₃-NaBr-NaNO₃ system, association constants 2=17093

Silver compounds—contd

- AgNO₃—NaNO₃ molten mixtures, interionic diffusion 4=29617
 AgNO₃—NaNO₃ quadrupole n.m.r., satellites intensity 0=21091
 Ag—Ni alloys, Fick's first diffusion eqn. 3=15503
 Ag₂O, crystal structure, neutron diffn. results 1=20537
 Ag₂O, ads. of cations, anions, in dilute solns. 3=13608
 Ag₂O binding properties 1=12347
 Ag₂O, new modification with layered structure 4=10551
 Ag₂O, photoconductivity rel. to prep. method 4=22806
 Ag₂O, 2°–80°K, specific heat and entropy 3=769
 Ag₂O, specific heat of large crystals 3=768
 Ag—Pb, liquid, thermodynamic properties 1=8111
 Ag—Pb, surface free energy, anisotropy, effect of metallic impurities and temp. 4=17373
 Ag—Pd, adsorption, of H from soln., Ag conc. effects 4=30893
 Ag—Pd alloy cold worked, electrical resistivity recovery 2=23231
 Ag—Pd alloy, lattice parameter, effect of temp. 4=15794
 Ag—Pd alloys, electrical props., effect of annealing 4=22684
 Ag—Pd alloys, lattice parameters, temp. depend. 4=26673
 Ag—Pd alloys, Pd self-diffusion coeff. at 850° and 896°C 4=9994
 Ag—Pd, depth-dependent conc. grad., X-ray study 2=21504
 Ag—Pd, effective charge of Ag and Pd ions 1=20576
 Ag—Pd, effective charge of Ag and Pd ions 2=8838
 Ag—Pd, elec. res. and magnetoresistance 0=9942
 Ag—Pd, heat of formation 2=21540
 Ag—Pd, hydrogen absorption 0=12117
 Ag—Pd, quenched-in vacancies 1=19762
 Ag—Pd, residual elec. resistance 1=5002
 Ag—Pd, sputtering with A, He and Xe 0=12645
 Ag₂Pd₃S, elec. cond. 0=18001
 Ag—Pt alloys, phonon scattering on Pt atoms 2=23048
 Ag—Re alloy, elec. resist. at low temps. 4=22681
 Ag—Re, elec. resistance, pressure and temp. coefficients 1=19831
 AgS, contact potential photovoltaic effect in films 4=28650
 AgS photocells, FESSU, characteristics 4=17539
 AgS surface growths on Ag, effect on crystal structure, by electron diffn. 4=2090
 AgS, thermal self-diffusion in S vapour 4=9990
 Ag₂S, Brillouin zone, chemical bonds and conduction mechanism 0=13605
 Ag₂S, crystal structure and electronic props. 0=7946
 Ag₂S layers, photovoltaic effect, positive and negative 4=28647
 Ag₂S patches on Ag, nucleation, role of defects 2=6846
 Ag₂S, thermoelectric power 1=12466
 Ag₂S, whiskers, growth 0=16275
 Ag₂S, zeta potential 2=1381
 Ag—Sb films, structure, electron diffract. study, Sb depend. 1=4081
 Ag—Sb, lattice heat conduction at low temps. 0=11591
 Ag—Sb, lattice spacing and electronic structure 1=20571
 AgSbS₂, miargyrite, crystal structure redeterm. 4=23474
 Ag₃SbS₃, optical and elec. props. 4=26152
 Ag—Sb—Te, AgSbTe₂ phase formation 3=18345
 AgSbTe₂, anomalous Hall effect 0=20921
 AgSbTe₂, Hall effect, anomalous 3=836
 AgSbTe₂, resistivity and thermoelectric power, 80° to 300°K 3=13144
 AgSbTe₂, semicond. props. 0=11680
 AgSbTe₂, solid solns. with PbTe and SnTe, elec. props. 3=876
 AgSbTe₂, structural study 0=21202
 AgSbTe₂, thermal cond. 4=25868
 AgSbTe₂, thermal conductivity 0=7860
 AgSbTe₂—AgBiTe₃, —PbTe, and —SnTe, thermoelec. props. 3=10900
 AgSbTe₂—GeTe, for thermoelectric power generation 1=8967
 AgSbTe₂—PbTe, for thermoelectric power generation 1=8967
 AgSbTe₂—PbTe, thermoelec. props. rel. to constituent proportions 2=18759
 AgSbTe₂—Se, thermal, elec. props. 3=875
 AgSbTe₂—SnTe, lattice thermal cond. 2=18538

Silver compounds—contd

- AgSbTe₂—SnTe, for thermoelectric power generation 1=8967
 Ag—Se, elec. resist., temp. depend. 0=10282
 Ag—Se films, structure 3=13563
 Ag—Se layers, resistivity and thermoelec. power 0=7968
 AgSe, molecular spectrum, absorption 3=10524
 Ag₂Se, Brillouin zone, chemical bonds and conduction mechanism 0=13605
 Ag₂Se, crystal structure and electronic props. 0=7946
 Ag₂Se, crystal structure and semiconducting props. 4=1622
 Ag₂Se, electrical, thermoelectric and thermal props., beta-ray effects, 2 MeV 4=10070
 β-Ag₂Se, ionic conduction, composition depend. 0=20872
 Ag₂Se, phase transform., α-β, in films 4=23291
 Ag₂Se, polycryst., diffusion of Cu 2=12459
 Ag₂Se, thermal conductivity and phase transition 2=573
 Ag₂Se, thermal and elec. props. 3=2926
 Ag₂Se, thermoelec. and crystallographic props., effect of doping 1=6186
 Ag₂Se, thermoelectric power 1=12466
 Ag₂Se_xS_{1-x}, electrical props. 1=12410
 Ag—Si contact, with light emission and rectifying props. 0=20909
 Ag—Si system phase diagram, solid-liquid 4=5445
 Ag₂VI's, pseudo-binary systems, electrical properties 1=12410
 Ag—Sn alloy, elastic consts., effect of Pb addition 4=28964
 ε Ag—Sn alloys, cold worked, lattice deformation and recovery 4=23206
 Ag—10% Sn, f.c.c., filings, heavy deform. faulting, by X-ray diffn. 3=8418
 Ag—Sn films, supercond., edge effect suppression 4=27433
 Ag—Sn, lattice spacing and electronic structure 1=20571
 AgSn, molecular dissociation energy 2=8127
 Ag—Sn, thermal vacancies, formation energy, specific resist. 1=11192
 Ag—Sn—Cd h.c.p. alloys, lattice spacings 4=15795
 Ag—Sn—Mn alloys, paramag. susceptibility 3=8643
 Ag—Sn—Mn, paramag. props., 300–700°K 4=15626
 Ag—Sn—Mn solid solns., lattice spacings 2=21537
 Ag₂SO₄·4NH₃, growth and crystal props. 0=13921
 AgTcO₄, crystal structure 2=23854
 Ag(30–40%)—Te, alloy, cubic struct., metastable 2=10903
 Ag 47—Te 52, L-absorption spectrum rel. to electronic structure 1=20000
 Ag—Te films, electron diffraction study 3=18383
 Ag₂Te, degeneracy study, for Hall coeff., resistivity and Seebeck coeff., 55–300°K 1=3772
 Ag₂Te films, elec. conduction by dendrites 1=8957
 Ag₂Te, Hall effect and resistivity 1=17757
 AgTe, magnetothermal effects at high-temp. 2=23066
 Ag₂Te, magnetothermal effects at high temp. 2=23066
 AgTe, molecular spectrum, absorption 3=10524
 Ag₂Te, crystal structure and semiconducting props. 4=1622
 β-Ag₂Te, elec. & thermal props. 3=837
 Ag₂Te films, elec. props., structure 3=833
 Ag₂Te films, structure transformation 3=18384
 α-Ag₂Te, galvano- and thermomagnetic effects 0=20922
 Ag₂Te semicond. films, props. and structure 4=23580
 Ag₂Te, semiconducting properties, +20° to –190°C 3=20343
 Ag₂Te, thermoelectric power 1=12466
 Ag₂Te, thermoelectric properties 1=3798
 Ag₂Te_xS_{1-x}, electrical props. 1=12410
 Ag₂Te—Sb₂Te₃ phase diagram 3=836
 Ag₂Te—Sb₂Te₃, phase diagrams 1=20584
 Ag₂Te_xSe_{1-x}, electrical props. 1=12410
 Ag—Ti, cpd. formation 1=15162
 AgTiTe, semiconductor, prep. and props. 3=874
 AgZn, accelerated ordering and hardening by thermal cycling 4=23289
 Ag—Zn, Ag and Zn self-diffusion, temp. depend. 2=2847
 Ag—Zn alloy, packing defects, 600°–650°K 3=20160
 Ag—30% Zn alloy, Zener relaxation 2=21399–400
 Ag—Zn alloys, α-solid soln. range, void formation 4=29170
 Ag—Zn alloys, shear stress values, critical resolved, rel. to temp. and comp. 4=28982
 Ag—Zn alloys, transport numbers, various phases 3=11354

Silver compounds—contd

- Ag-Zn alloys, transport of Ag, Zn, under elec. field 3=20235
 Ag-Zn, anelastic piezoresistance, stress-induced ordering 4=12847
 Ag-Zn, β , β' , ζ phases 2=21542
 Ag-Zn, deformation in tension and shear 3=15986
 AgZn, diffusion, non-equil., deformation-enhanced 2=10408
 Ag-Zn, ϵ and η phases, lattice spacings 3=6856
 AgZn, Hall effect 3=838
 Ag-Zn, quenched, thermal vacancies formation and decay 4=6828
 α Ag-Zn solid soln., activation energies for diffusion and Zener relaxation 4=23235
 Ag-Zn solid solutions, yield point and strain ageing 2=14888
 β -AgZn, spectral reflectivity rel. to temp. 2=18789
 Ag-Zn, stacking fault probability meas. 1=7586
 Ag-Zn, stacking faults 1=19797
 Ag-Zn, thermal vacancies, formation energy, specific resist. 1=11192
 AgZn, three structural phases, thermodynamics 3=1352
 Ag-Zn, $\zeta \rightarrow \beta$ transformations 1=1411
 Ag-Zn, ζ -phase stability 3=8396
 Ag-Zn-Mg, ϵ -phase, lattice spacings, Mn valency 4=23476

Sintering

- alkaline earth borates and fluoroborates, rel. to Ce activator content 2=6595
 alumina, diffusion sintering, obs. of powder compact shrinkage 4=13663
 alumina, test of diffusion model of sintering 1=7881
 aluminium, mechanical props., no grain size effect 4=30767
 binary alloys, conc. distribution functions 1=15169
 carbides, grain size study, magnetic method 1=6555
 ceramics for capacitors, review 1=7687
 ceramics, rel. to plastic deformation 4=7380
 diffusion activation energy meas. from elec. cond. var. 4=13665
 diffusion models, intermediate and final state 1=7880
 diffusion sintering, models, application to powder compact shrinkage 4=13662
 diffusion theory 0=3167-8
 ferrite rings, for single crystal preparation 4=4545
 ferrites, cooling equilibrium atmospheres 1=6549
 ferrites, surface structure, effect on mag. props. 1=3914
 ferroelectric ceramics preparation 2=14617
 glass ceramics, review 4=26731
 grain boundaries rel. to sintering rate 2=8872
 ice 0=19508
 ice, evaporation—condensation theory, data for -3° to -20°C 4=13661
 ice, mechanism 2=2360
 last stage, grain boundary motion 1=9157
 Lifshits—Slezov process, kinetics 1=6556
 metallic multicomponent systems, volume changes 4=7688
 metallic powder compacts, elastic moduli 0=1841
 metals, rel. to plastic deformation 4=7380
 metals, rel. to surface tension 4=10361
 and plastic deformation, metals, ceramics, polymers 4=7380
 polymers, rel. to plastic deformation 4=7380
 from precipitation kinetics of supersaturated solid solutions 1=20619
 quartz powder, phase transformations 1=20399
 S.A.P., activation energy and volume 4=20643
 sound velocity, compressibility, in sintered materials 2=2828
 steels, Cr-Ni, sinterability 2=831
 theory inadequacies 4=20787
 thermoelectric materials, powder metallurgy 3=3346
 two-particle model, size sensitivity 2=17058
 Ag, grain boundary and vol. diffusion 4=28482
 Al powder, creep props. 2=16961
 Al, rel. to pressure, time, temp. 3=6876
 Al_2O_3 , density increase by adding MgO 4=20788
 Bi^{10} powder, under n-irradiation 1=14351
 Ba ferrite, rel. to coercivity 3=11094
 Ba-Bi ferrite magnet 1=20113

Sintering—contd

- BaTiO_3 , doped, thermal analysis study 2=16990
 BaTiO_3 , in gradient furnace 2=14617
 BaTiO_3 , non-ferroelec. hexagonal modification 2=14633
 BaTiO_3 , rel. to its props. 2=14636
 BeO 3=18368
 Bi_2Te_3 , cold compacting 3=3346
 Bi_2Te_3 , variation of thermoelec. power with sintering temp. 0=7972
 CaO powder, thermoelec. power and elec. cond. 4=22705
 Cb-W-Mo-Zr, sintered, homogenization kinetics 4=15810
 CdS film preparation 1=11323
 CdS films, rel. to photocond. sensitivity 3=904
 CdS, pellet prod., in photocells and resistors 4=30658
 Cr-Mo powder mixtures, diffusion and growth 0=12070
 Cu alloys, segregation during sintering 0=18395
 Cu, appl. of two-particle model 2=17058
 Cu, rel. to recrystn. and effect of cold pressing 2=6785
 Cu, rel. to diffuse and double Bragg X-ray reflection 4=15804
 Cu, gravity effects on radial shrinking 4=7689
 Cu, thermodynam. and defect mechanism 2=23898
 Cu, void shrinkage and densification 3=13537
 Cu-Cr alloys, rel. to props. 2=15052
 Cu-Ni, conc. distribution functions 1=15169
 Cu-Ni (80,60,40%Cu), rel. to electrical conductivity 1=10028
 Cu-Ni powder mixtures, diffusion and growth 0=12070
 CuO, effect on semicond. props. 2=6465
 Fe, effect on elasticity modulus and damping 2=16945
 Fe powder, rel. to grain boundary sliding 3=11293
 Fe, rel. to self-diffusion 2=6368
 Fe, tensile strength for various sintering conditions 4=10388
 MgO powder, thermoelec. power and elec. cond. 4=22705
 MgO, water vapour effect 4=23546
 Mn ferrites, defect formation 0=11889
 Mn ferrites, rel. to structure 2=23935
 Mn-Zn ferrites, rel. to pressed density 1=20648
 Mo, grain size reduction on adding Si 3=20921
 NaCl, evaporated films, mechanism 3=25777
 NaCl, plastic flow effects 4=17834
 NaCl, in presence of inert gas 0=8463
 Nb_3Sn , rel. to superconductivity 1=18720-1
 Nb_3Sn , temperature, rel. to supercond. props. 2=9486
 Ni, effect of H_2 and Xe adsorption 2=10946
 Ni ferrites, effect on elec. props. 2=6471
 Ni-Cu mixtures, homogenization rel. to grain surfaces 4=10593
 NiO-CuO- Li_2O system, effect on elec. props. 2=6465
 Ni-W powder mixtures, diffusion and growth 0=12070
 NiZnCo ferrite, rel. to magnetic dispersion 3=18100
 PbSe 1=1078
 PbTiO_3 - SrTiO_3 - $\text{Bi}_{2/3}\text{TiO}_3$ solid solutions, prep. 2=14632
 Pt- Al_2O_3 catalyst, 300° to 1300°C 3=18367
 Th, effect of O_2 , C and N_2 on properties 0=10462
 TiC, study by elec. resist. change 2=6842
 TiO_2 4=23545
 U, β , α phases, contraction at var. temp., activation energies 4=13664
 U oxides 1=1446
 U oxides, impurity effects 2=834
 U, and phase transform., $\alpha \rightarrow \beta$, $\beta \rightarrow \gamma$ 4=17772
 UC, conditions 3=7079
 UC, diffusion activation energy meas. from elec. cond. var. 4=13665
 UO_2 , in CO_2 atmosphere 4=4654
 UO_2 , fractographic studies 1=20647
 UO_2 , in H_2 , pore distrib. 3=11311
 UO_2 , in H_2 at 1350°C, prep. of fine-grained product 0=8464
 UO_2 , high-density bodies 1=20646
 UO_2 , microfractographic obs. 3=3240
 UO_2 , optical, electron microscopy 2=4518
 UO_2 , over-sintered, grain-boundary precipitates in 4=7680
 UO_2 , review 0=14056
 UO_2 , sintered, high-temp. torsion 3=6777
 $\text{UO}_2/\text{U}_3\text{O}_8$ mixtures, activation energy 4=20790
 W, arc plasma-sprayed, effects on props. 4=15719
 W, effect of H_2 and Xe adsorption 2=10946
 W, kinetics, diffusion process meas. 4=7687
 W rods, in H_2 atmosphere 3=13541
 WO bronzes, temperature 3=25390

Sintering—contd

- YFe garnets, with Ne 0=21057
 Zn oxide spheres, in air, O₂, H₂, He 0=1958
 ZnFe₂O₄, grain growth study 2=4479

Skin effect

- a.c., current density rel. to conductivity 2=9514
 anomalous effect on nuclear magnetic resonance 1=14820
 anomalous, in normal metals, theory 1=3724
 anomalous, rel. to electronic structure of metals 1=2383
 anomalous, rel. to surface impedance of superconductors, calc. 0=10841
 anomalous, rel. to u.s. absorption in metals 1=12355
 anomalous skin effect and n.m.r. in metals 3=20673
 anomalous, theory of 3=19253
 anomalous, in thin metal films, mag. field present, theory 4=6913
 cold cathode arcs movement 2=13551
 current propagation on surfaces generated by revolution 1=9523
 cylinder, arbitrary section, resistance, self-inductance sine current 4=440
 cylindrical bar, of any section, low frequency 4=5540
 in discharges, in air and hydrogen, at 300 kc/s 1=4589
 electrical explosion of skin-layer 4=15516
 electron surface collisions, Fermi liq. theory 3=25245
 exploding wire circuits, transient effects 3=3981
 ferromagnetic films, standing spin-wave excitation 0=21035
 ferromagnetic resonance, role in 3=23207
 ferromagnetic sheets, domain wall theory 4=7235
 ferromagnetic strips, rel. to permeability meas. 2=13650
 general formulation, two-dim. 2=7551
 m.h.d. travelling-wave devices 3=21967
 metal films, anomalous, effect on optics in i.r. 4=22834
 metals, anomalous effect, rel. to Fermi surface 1=17595
 metals, anomalous, magnetoplasma oscill. 3=8411
 metals, electron momentum meas. 2=18554
 metals, electron momentum meas. 3=6496
 metals, h.f. impedance, effect of narrow bands 2=20985
 metals, optical properties rel. to dielectric const. 4=13000
 metals, polyvalent, anomalous effect, rel. to electronic structure 0=9888
 metals, surface impedance in i.r. region 3=20434
 normal, in mag. fld. at low temp. 3=2778
 plasma, in l.p. discharges, in H and air 0=16978
 plasma, relativistic 0=19678
 plasma, 3-component, magneto-acoustic waves 0=19694
 plates, thin, static skin effect 4=441
 in pulsed high-current discharges 1=7044
 ring discharge, h.f., 0.9-5.6 Mc/s meas. 4=18717
 semi-infinite metallic medium, transition region 0=13576
 size effect, 1-5 Mc/s 3=842
 size effect, 1-5 Mc/s 3=8493
 sphere in field of current loop, quasistationary case 4=19168
 static skin effect, in strong mag. field 3=25223
 superconductors, surface impedance in a mag. field 0=8926
 wires, static skin effect 4=441
 Ag, from i.r. data 0=6078
 Al, anomalous, rel. to band structure 0=9887-8
 Al, anomalous, rel. to Fermi surface 1=17596
 Au, from i.r. data 0=6078
 Be, anomalous, rel. to free current carriers theory 2=10569
 Bi, anomalous, rel. to effective hole mass 2=4031
 Bi, anomalous skin effect 4=12882
 Bi, anomalous, at 2°K and 23.5 kMc/s 0=1658
 Bi, change, anomalous to classical 2=2071
 Cd, anomalous, rel. to Fermi surface 1=17596
 Cd, static, 4.2° to 78°K 4=10023
 Cr, polycryst., meas. rel. to Fermi surface area 3=2757
 Cu, from i.r. data 0=6078
 Mg, anomalous, rel. to Fermi surface 1=17596
 Mo, polycryst., meas. rel. to Fermi surface area 3=2757
 Ni, from i.r. data 0=6078
 Sn, films, superconducting penetration depth 0=8931
 W, polycryst., meas. rel. to Fermi surface area 3=2757
 Zn, anomalous, rel. to Fermi surface 1=17596

Sky brightness

- See also Airglow; Twilight
 actinometer readings, effect on 2=2485
 albedo, rel. to atmospheric turbidity 3=6961
 altitude depend. and absolute brightness 3=23626

Sky brightness—contd

- calculation, aerosol and multiple scatt. effects 4=29292
 daylight, spectral energy distrib. 3=11406
 daytime radiance, up to 80 000 ft. 2=15195
 diffused skylight, apparatus for meas. by rocket 2=24020
 during eclipse (20 July 1963) 4=26956
 energy distrib. of daylight, from overcast sky 0=14297
 height dependence, rel. to aerosol layer thickness 2=15208
 high altitude meas. 4=29293
 intensity distrib., photographic meas., using wide-angle objectives 4=10722
 infrared background 1=20841
 i.r. radiance, distrib. over clear sky 0=2024
 i.r. radiation distrib., prediction 3=3465
 i.r. spectral radiance 1=1512
 long-wave radiation from clear skies 4=2197
 meas. at 3.8 Mc/s, aerial appl. theory 2=9111
 night, interferometric study 0=16470
 at night, 0.9-1.8μ 2=24021
 night, separation of extra-terrestrial and atmospheric components 3=16279
 night sky, component separation 2=4660
 night sky at 8640 Å up to 200 km 3=23627
 photometry, integrating sphere 4=29295
 polarization, calc., different model atmospheres 3=1445
 polarization during twilight 0=4804
 polarization meas. of skylight 3=19028
 polarization rel. to wavelength in sunlight 2=21636
 pyranometer, Bellari 2=11024
 scattered, 1-3.5 μ, up to 17 km 3=18510
 spectral distrib. rel. to correlated colour temp. 4=29294
 spectral energy distrib., meas. 2=4599
 spectral radiance, 1-20μ 2=4590
 spectral radiance, 1-20 μ, instrumentation 1=1511
 starlight, integrated over sky 1=2575
 sunlight, scatt. by atmosphere, rocket meas. 2=11023
 total radiation meas. during IGY 3=9042
 twilight, effect of lunar atmosph. tide 3=6988
 twilight, polarization at zenith, spectral meas. 4=23781
 use in meas. of transparency of atmosphere 1=6589
 u.v. radiation from zenith sky 4=4772
 in u.v. and visual spectral regions, meas. 4=26793
 upper atmosphere radiation not rel. to sun 4=13825
 He extreme u.v. radiation 2=4726

Sliderules

- calculator for conversion of optical densities into composition 1=6582
 dB addition, circular 3=11672
 for complex numbers 3=5323
 for interferometric length meas. 0=6943
 ionospheric absorption loss and max. usable frequ. 3=24483
 nomographic type, direct-reading, for spectral blackbody radiation 0=14879
 Pythagoras' formula in 3-dim., hypotenuse evaluation 1=17983
 for Xe, absorbed radioactivity calc., after power reactor shutdown 0=9723

Slip

- adiabatic instability 4=26478
 alkali halides, slip bands from dislocation multiplication 4=1482
 anisotropically cohesive medium, line eqns. 2=10762
 band formation from dislocation lines 1=7581
 band formation from dislocation lines 1=10002
 bands, energy release during fracture 3=1242
 α-brass, individual slip lines 0=16219
 α-brass, polygonization 0=17950
 brass, subject to alternating torsion 4=1939
 brittle fracture, origin of 2=23781
 and climb forces 3=17726
 compressible, liquids, boundary layer calc. 4=16076
 compression textures, materials of rocksalt type 1=20700
 cross slip and cross climb of dislocations induced by a locked dislocation 1=8907
 cross slip, dislocation barriers, long jogs 0=17933
 cross-slip in fatigue crack formation 1=4000
 crystal aggregates, plasticity theory, associated flow rule 1=1321
 crystals, independent systems, number 3=16000

Slip—contd

crystals, rel. to work hardening 1=12598
 diamonds, planes, rel. to plastic deformation 4=15707
 dislocation crossing, rel. to point defect creation 2=3896
 dislocation cross-slip, stress-aided 1=1331
 dislocation mobility 2=14446
 dislocation multiplication during glider-band formation, theory 2=8220
 edge dislocations, stress fields 1=3664
 elastic domain development 3=13367
 elliptical glide zone, dislocation distrib. 4=4049
 f. c. c. crystals, in compression testing 4=30764
 f. c. c. crystals, primary systems, dislocs. 3=12975
 f. c. c. metal crystals, slip line pattern 1=2511
 fatigue crack nucleation, cross-slip models 3=20749
 fatigue damage accumulation at high temp. 3=20745
 formation, dislocation theory 2=10388
 friction acting on moving dislocation 3=17728
 frictional, Bauschinger's effect 0=21111
 glide, secondary, shear stress formula 3=5069
 grain-boundary sliding 2=14895
 graphite, slip planes, electron diffr. study 0=10343
 h. c. p. crystals, subsidiary glide systems, stress distrib. 4=1919
 hexagonal crystals, indep. slip systems rel. to ductility 4=15694
 ice, glide bands, non-basal, on plastic deformation 3=17763
 ice single crystals, basal slip as deformation mechanism 4=10381
 interaction between fixed and mobile dislocations, in slip plane 0=17937
 ionic crystals, glide band formation and broadening 4=4446
 α -iron, thin foils, slip, cross-slip planes 1=19785
 α -iron, thin foils, slip, cross-slip planes 2=8227
 metal fatigue model at low temps. 4=7387
 metal work hardening, electron mic. obs. 4=26481
 metals, around indentation 1=20389
 metals, b. c. c., rel. to plastic deformation, geometry 4=13377
 metals, close-packed structure, review 4=28923
 metals, cross-slip, initiation at jogs 2=6337
 metals, discontinuous slip, low-temp., apparatus 3=9667
 metals, f. c. c. 4=23160
 metals, f. c. c. and b. c. c., effect on rolled surface texture 4=30753
 metals, f. c. c. and b. c. c., rel. to rolling textures 4=13637
 metals, f. c. c., cross-slip and fatigue 2=6756
 metals, fatigue, microstructural damage 3=20735
 metals, hexagonal and cubic 4=13387
 metals, microscope obs. of bands 4=6853
 metals, microslip, rel. to electrocapillary effect on elastic modulus 4=4438
 metals, polycryst., in plastic deform. theory 2=6733
 metals, within grains in "flow areas" 0=6305
 multiple glide and orientation changes meas. 3=5068
 muscovite mica, rotational slip and pseudo-structure 1=10006
 nylon 66 and 610, obs. and interpretation 2=19002
 oblique, in rock-salt struct. crystals, rel. to strain hardening 4=23105
 plasma, macroscopic electron-ion energy exchange 4=14637
 plastic deformation via glide, theory 2=16953
 polycrystalline metals, plastic deformation 2=12853, 14881
 polyslip in single crystals 1=1328
 random, as fatigue model, rel. to Coffin's law 1=1540
 rocksalt, plasticity 0=21127
 ruby, prismatic and basal 4=20283
 sapphire, prismatic and basal 4=20283
 slip element determination from asterisms of Laue spots 1=11516
 slip planes in fatigue crack formation 1=6476
 solid surfaces, initial contact, nature 4=10368
 steel, low-C, intragranular slip in yield-stress range 4=17744
 steel, mild, initial, along 45° direction 4=4472
 strain estimation during creep 4=26476
 stress field at free surface 4=1918
 surface replicas, calc. of work hardening rate 3=20720
 system with highest stress, theoretical det. 4=20636
 theory reviewed 1=3978

Slip—contd

rel. to twin intersections, and Cahn's continuity conditions 4=23305
 vector differential equations for tension, soln. 4=18126
 Ag, and crystal dislocations 4=26527
 Ag, during abrasion with emery cloth 2=8758
 Ag, fatigued, correl. with work hardening 3=20748
 Ag, secondary slip 4=30766
 Ag, single crystals, effect of surface films of C, Pt, Fe, Cr 0=21113
 Ag, rel. to stacking-fault energy 3=1230
 Ag-steel interface, continuous slip traces 2=16653
 Ag, thermally activated glide 0=21114
 AgCl, kink bands 2=23762
 Ag₂-Al, (1100) [1120] prismatic slip, strain rate and temp. effect on critical resolved shear stress 4=30783
 AgMg, (321) [111] slip, strain rate and temp. effect on critical resolved shear stress 4=30785
 Ag-(Zn, Cd) alloys, stacking-fault probabilities 4=4063
 Al alloys, fatigued, microstruct. changes 3=20741
 Al, change of structure in second slip system 2=12858
 Al, cold worked 1=10007
 Al, dislocation tangles in easy glide range 2=12436
 Al, fatigued, autoradiography of slip lines 2=19015
 Al mono- and polycrystals, comparison 1=3975
 Al + 1.7% Cu alloy 1=20602
 Al, polycryst., rel. to crystal orientation 2=6741
 Al, quenched single-crystal plates, patterns 0=3152
 Al, 350-400°C, electron microscopy obs. 3=22793
 Al, rel. to fission fragment bombardment 3=17706
 Al, secondary glide near grain boundaries 3=5069
 Al, secondary slip 4=30766
 Al, single crystals, slip patterns 0=3149
 Al, slip line behaviour under stress reversal 3=8441
 Al, rel. to stacking-fault energy 3=1230
 Al, surface slipband transitions in plastic deform. 4=7386
 Al, thermally activated glide 0=21114
 Al, u.s. study 2=21436
 Al-Ag, in age hardened fracture process 4=28932
 Al, and Al-Si alloys, pattern structure 1=10219
 Al-Cu, in age hardened fracture process 4=28932
 Al₂O₃, prismatic slip, kink energies 2=8217
 Al-Zn, in age hardened fracture process 4=28932
 Al-Zn-Mg, torsion fatigue prod. 4=23127
 Au, cross slip in work hardening 1=1333
 BaTiO₃, preferred mode, by etch pit pattern in plastic deformed region 4=30565
 Be, hexagonal metals, glide elements from Lane asterisms 2=4317
 Be, inclusions, behaviour under pressure 2=16969
 Be, prismatic, critical shear stress meas. 4=20647
 Be single crystals in tension, orientational dependence 1=12602
 Bi, giving defects, interaction with twinning dislocations 4=10454
 Bi, polycryst., under pressures to 20,000 atm. 3=16017
 CaF₂ (fluorite), cross-slip mode of dislocation multiplication 1=8910
 Cd crystals, basal slip twinning, in tensile testing 2=10766
 Cd dislocation-free crystals, nonbasal glide 1=12535-6
 Cr, plastic deformation 2=8717
 Cr-Ni alloy, rel. to temp. dependence of damping decrement 1=20308
 CsCl type crystals, independent slip systems 4=1934
 Cu, associated with fatigue 4=26504
 Cu bicrystals, grain-boundary sliding 1=20361
 Cu, cold rolling relative slip and deformation 2=10763
 Cu, creep at 1050°C, slip bands formation 1=20358
 Cu, creep at 1050°C, slip bands formation 2=21435
 Cu, cross-slip and crack formation 1=14900
 Cu, evidence for dislocation reactions 0=7883
 Cu, fatigue induced, electron microscope exam. 4=23139
 Cu, fatigued, persistence of voids 4=15705
 Cu foil crystals, slip lines config. during deformation 4=1936-7
 Cu, rel. to irradiation-produced prismatic dislocations 3=17760
 Cu, latent hardening of cross-slip system 4=26503
 Cu, meas. after deformation in tension 4=9971
 Cu, neutron-irrad., in plastic deform. 4=10395
 Cu, neutron-irrad., thermal activation meas. 4=10377
 Cu, persistent slip bands near grain, twin boundaries 3=2809

Slip—contd

- Cu polycrystals, surface obs., after deform. 3=18199
 Cu, slip band formation, in fatigue tests 4=28941
 Cu, rel. to stacking-fault energy 3=1230
 Cu, rel. to strain rate 2=6735
 Cu, subject to alternating torsion 4=1939
 Cu, thermally activated glide 0=21114
 Cu, torsional fatigue cycling 3=20747
 Cu whiskers, slip line observations 1=1329
 α -Cu—Al alloy, primary and cross-slip lines 3=15999
 Cu—Al (6%), cross slip in easy glide under tension 4=7423
 Cu—14% at Al single crystals, cross, during easy glide, no temp. var. 3=23337
 α Cu—Al single crystals, microstraining 3=20706
 Cu—Au alloys, rel. to ordering 3=20685
 Cu—Au, shear deform., differences between ordered and disordered alloy 4=7417
 Cu₃Au, initiation mechanism, rel. to order 2=10761
 Cu—Be, single crystals in γ phase 4=7486
 Cu—Ge alloy 4=7422
 Cu—Pd, shear deform., differences between ordered and disordered alloy 4=7417
 Cu—Zn alloys, rel. to stacking-fault energy 3=1230
 Cu—(Zn, Cd) alloys, stacking-fault probabilities 4=4063
 Fe, α -phase, dislocation initiation 2=8214
 Fe, Armco and pure 4=23160
 Fe, fatigue induced, electron microscope exam. 4=23139
 Fe, at 4.2-77°K 0=8118
 Fe intercrystalline, on weak plastic deform. and annealing 4=13432
 Fe, α -phase, slip bands after neutron irradiat. 3=809
 Fe crystals in tension 3=20198
 α -Fe, deform. twins, indented surface markings 3=13403
 Fe, polycrystalline, rel. to grain size 4=15709
 Fe single crystal plates 1=14868
 Fe single crystal plates, in early stages of tensile deformation 4=7432
 Fe, slip bonds in single crystals 1=14902
 Fe, at twin boundaries, and its effects 1=2512
 Fe, zone-melted, unusual 3=10678
 Fe—Al, iron-rich, slip system 4=6854
 FeO, on compression at 650°C 4=1950
 Fe—Si alloy, influence of Si content on crystallography of slip 4=7431
 Fe—Si alloy, propagation over grain boundaries 4=20663
 Fe—Si alloys, ball-indented 1=20363
 Fe—3%Si, dislocations distrib. in slip bands 2=14436
 Fe—Si, initiation 1=3984
 Fe—Si (3%), deformation rate effects 4=26516
 Fe—Si(3.5%) intercrystalline, on weak plastic deform. and annealing 4=13432
 Fe—3.25% Si, {112} as active slip planes 2=18581
 Fe—3% Si, planes, at 78°K 4=4471
 Fe—3%Si, plastic deformation 3=20176
 GaP, slip plane elec. and optical effects 4=22573
 Ge, microhardness meas., indentation microstructure 1=20362
 Ge, microhardness meas., indentation microstructure 2=8737
 Ge, single without cracks, etching obs. 3=22792
 Hg, crystalline, slip plane 4=6855
 KCl crystals, cross-slip on bending 2=14894
 KCl—KBr, temp. effects 4=4484
 KCl, screw-dislocations, etch obs. 2=2084
 LiF, growth of slip bands, calc. 1=8907
 LiF, and plastic flow, 400°C 4=17739
 Mg, basal and pyramidal slip from diamond indenters 4=1955
 Mg, fatigue induced, microscope obs., and Fe 4=23175
 Mg monocrystals, at low temps. 1=1314
 Mg, subsidiary glide systems 4=1919
 Mg—Al(0.8%), at grain boundaries 4=20666
 Mg—Al, solid solution, slip lines rel. to Mg composition 1=11515
 MgO, bicrystals, interaction with grain boundary 2=6754
 MgO, electric charge along slip planes 1=7827
 MgO, fatigue deformation, slip band behaviour 4=4475
 MgO, rel. to fracture 3=6802
 MgO, lattice rotation at slip bands 2=2089
 MgO monocrystals, effect on fracture 1=3996
 MgO, motion of dislocations 3=5071
 MgO, prismatic slip, kink energies 2=8217
 Mo single crystals, conjugate slip analysis 4=1956

Slip—contd

- NaCl 4=30786
 NaCl, dislocations in glide bands, birefringence obs. 1=14261
 NaCl, elementary steps, electron micr. study 2=12859
 NaCl, lattice structure in slip band, effect of annealing 1=1330
 NaCl, tracks 2=21579
 NaCl, usual and transverse, rel. to load 3=17758
 NaCl whiskers 1=14901
 NaCl whiskers 1=20448
 Nb, polycrystalline, slip lines in microstrain region of annealed specimens 4=23192
 Nb single crystals, glide systems 1400°-2300°C 4=4483
 Nb, work hardened 4=7443
 Ni alloys, deformed by bending, rel. to twinning 0=6302
 Ni crystals, plastic deformation 4=4478
 Ni, intercrystalline, on weak plastic deform. and annealing 4=13432
 Ni rel. to magnetic domain structure 2=4309
 Ni, part of creep not revealed structurally 3=18194
 Ni rel. to magnetic domain structure 1=20304
 Ni—Co alloy single crystals 2=16958
 Ni—Cr(13%) intercrystalline, on weak plastic deform. and annealing 4=13432
 Ni₃Mn 0=21112
 Pb, and crystal stacking fault energy 4=9975
 Pb films, repeated temp. cycling 4=4669
 Pb monocrystals, easy glide 1=20359
 Pb, polycrystalline, under simple shear 3=6793
 PbS and impact figure formation 4=26517

 Na dodecyl sulphate, aq., films, elasticity 2=15561
 Na europium tungstate, fluorescence, rel. to rare-earth ion substitution 2=10629
 Na Ferrocyanide, Mossbauer effect 0=9524
 Na fluorenone, e.s.r., dims. 2=23012
 Na fluorescein aq., luminesc., KI quenching 3=3807
 Na formate, acetate and propionate, u.s. props. 3=14162
 Na formate, electronic spectra of trapped CO₂ 2=10603
 Na glutamate, proton mag. resonance 2=12838
 Na halides, lattice vibrations, calc. 0=2782
 Na halides, mag. screening of Na²³ 3=23272
 Na halides, mixed, Na²³ n.m. relax. 3=8738
 Na halides, sp. ht. rel. to spectroscopic behaviour 3=764
 Na hypophosphite, n.m.r. study of conc. soln. 1=12904
 Na, liquid, resistivity and Knight shift 0=16693
 Na metadinitrobenzene, spin distrib. 2=10280
 Na metaphosphate as parting agent for electron-microscope replicas 1=7896
 Na molybdate in NaNO₃, heats of soln. and dil., interaction parameters of liq.-liq. mixtures 4=10631

Sodium compounds—contd

- Na—montmorillonite expanded in NaCl soln., birefr. 4=16091
- Na niobate—Ag niobate, ferroelectricity 1=1139
- Na niobate—vanadate, ferroelectricity 1=1139
- Na oleate, boiling heat transfer at coexistence of nucleate and film regions 4=27379
- Na oleate, foam layers in water 2=17432
- Na paratungstate, crystallization from aqueous solns., dilatometry application 4=26609
- Na perfluorosuccinate, X-irrad., e.s.r. spectra of free radical formed 4=20601
- Na perrhenate in NaNO_3 , heats of soln. and dil., interaction parameters of liq. — liq. mixtures 4=10631
- Na salicylate, fatigue effects on luminescent yield 4=20506
- Na salicylate, fluoresc. quantum efficiency 4=20505
- Na salts of fatty acids, aq., u.s. studies 2=11369
- Na silicate glass, colour centres rel. to γ -irrad. 2=16667
- Na silicates, glassy, structure study 4=29203
- Na silicates, glassy, structure study 4=29203
- Na tetraborate hydrates, n.m.r. study 3=8739
- Na thiosulphate, elastic constants calc. 2=4305
- Na thiosulphate single crystals, n. q. r. 2=2309
- Na thiosulphate, pentahydrate crystals, colour centres 0=6049
- Na uranyl acetate, circular dichroism and optical activity 2=16804
- Na uranyl-8-quinolate, crystal structure 0=4647
- NaAl silicate glasses, elec. cond., Al/Si depend. 0=11659
- NaAlF_4 , i.r. absorption spectrum of vapour 3=22553
- Na_2AlF_6 , films, growth, surface mobility and gas occlusion from optical props. 4=2120
- Na_2AlF_6 , fused, refractive index rel. to temperature 3=11796
- Na_2AlF_6 — Al_2O_3 —NaCl, melts, elec. cond. 4=29643
- $\text{Na}(\text{AlSi}_2\text{O}_6) \cdot \text{H}_2\text{O}$, crystal struct., atomic 4=23477
- $\text{NaAlSi}_3\text{O}_8$, albite melting curves rel. to pressure 3=9657
- $\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10} \cdot 2\text{H}_2\text{O}$, crystals, H atom positions 4=10552
- $\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10} \cdot 2\text{H}_2\text{O}$ (natrolite), neutron diffraction determ. of H positions 4=13603
- $8\text{NaAlSi}_3\text{O}_{10} \cdot 3\text{H}_2\text{O}$, crystal struct., atomic 4=26674
- NaAuCl_4 , Cl^{35} n. q. r., + 18° to -196°C 4=12520
- NaBF_4 , aq. soln., X-ray analysis 4=21100
- NaBO_3 glass, crystal structure rel. to Na content 2=8870
- NaBO_3 , vaporization, mass-spectrometric study 3=25807
- $\text{NaB}_3\text{O}_8 \cdot 5\text{H}_2\text{O}$, heat capacity meas. from 15° to 345°K , thermodynamic functions calc. 4=30517
- $\text{Na}_2\text{B}_2\text{O}_7 \cdot 10\text{H}_2\text{O}$ and $5\text{H}_2\text{O}$, Na^{23} n.m.r. 3=25591
- $\text{NaB}(\text{OH})_4 \cdot 2\text{H}_2\text{O}$, lattice structure 4=7641
- $\text{Na}_2[\text{B}_4\text{O}_7(\text{OH})_4] \cdot 8\text{H}_2\text{O}$, proton cond. 3=2904
- NaBePO_4 (beryllonite) crystal structure 2=12914, 17021
- NaBePO_4 , beryllonite, crystal structure 3=13472
- $(\text{Na}_{0.8}\text{Bi}_{0.2})\text{TiO}_3$, lattice parameters 3=20851
- NaBr, adsorption of Kr, statist. mech. study 3=3367
- NaBr, colloid centres, props. 0=11634
- NaBr, colour centre, F, struct. magneto, optical study at 1.86°K 4=17449
- NaBr, elec. cond. and colour centre 0=15880
- NaBr, electron energy loss spectra 2=3889
- NaBr, fused, refractive index rel. to temperature 3=11796
- NaBr, n.m.r. of $\text{Br}^{79,81}$, Na^{23} 3=14185
- NaBr photoelectric emission yield for 1.54–13.3 Å X-rays 1=13109
- NaBr. $2\text{H}_2\text{O}$, crystal and proton structure 3=6851–2
- NaBr. $2\text{H}_2\text{O}$, crystal structure 4=23478
- NaBr, thermal expansion 2=10338
- NaBr:Co, NaCl:Co, spectra, and Co coord. 4=26186
- NaBr:In, photoelectron emission and luminescence 4=1786
- NaBrO_3 , absolute configuration and rotatory power 4=23479
- NaBrO_3 , conductivity, elec., temp. var. and positive ion vacancies 4=7034
- NaBrO_3 , crystal growth, supersaturation effects 4=15764
- NaBrO_3 crystals, optical absorption changes on X-ray irrad. 4=13058
- NaBrO_3 , impurity shift of pure quadrupole resonance 1=6438
- NaBrO_3 , n. q. r. of $\text{Br}^{79,81}$, spin—lattice relax. 4=4434
- NaBrO_3 , nuclear double irrad. of Br^{79} 4=10344
- NaBrO_3 , optical const., $n(\lambda)$, $k(\lambda)$, i.r., from reflection spectra 3=20438
- NaBrO_3 , thermal decomposition 3=6910–11
- NaBrO_3 , Br^{81} quadrupole resonance shift by elec. field 1=14836

Sodium compounds—contd

- NaCN, phase transitions, n.m.r. studies 4=23294
- Na_2CO_3 , carrier effect on spectral line intensity of matrices 4=26224
- Na_2CO_3 , crystal structure anomaly 4=23480
- Na_2CO_3 , molten, structure, by X-ray diffr. 2=15565
- Na_2CO_3 , photo- and thermo-electron emission 3=19306
- Na_2CO_3 , thermodyn. props. at high temps. 3=22663
- $\text{Na}_2\text{CO}_3 \cdot \text{NaHCO}_3 \cdot 2\text{H}_2\text{O}$, n.m.r. rel. to proton positions 3=8859
- $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$, crystal structure 4=23481
- $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$, $\text{Na}_2\text{CO}_3 \cdot 7\text{H}_2\text{O}$, crystal structure, atomic 3=20854
- Na_2CO_3 in H_2O , conductivity, elec. 4=24237
- $\text{Na}_2\text{CO}_3 \cdot \text{NaHCO}_3 \cdot 2\text{H}_2\text{O}$, F^{17} function in structure analysis 4=17799
- NaCd_2 , crystal structure 2=23850
- NaCd_2 , crystal structure 4=23377
- Na_2CdO_4 , crystal struct., atomic 4=17818
- NaCl, abrasive wear 1=4003
- NaCl, absorpt. spectra, effect of Cd impurity 1=17877
- NaCl, absorption 1–3mm, temp. depend. 4=10195
- NaCl, absorption spectra, rel. to optical and thermal bleaching 4=28711
- NaCl, absorption spectra, 250 to 650 μ rel. to pressure up to 600 kg/cm^2 2=4137
- NaCl, activated, luminescence mechanism 2=6594
- NaCl, adsorpt. of HCN, bonding 4=29198
- NaCl aerosol, spherical particles 3=13626
- NaCl aerosols, prodn., props. 3=8983
- NaCl, Ag-activated, exoelectron emission 0=3780
- NaCl and alkali halide, vacancy pairs, dislocation 2=3897
- NaCl, alkalinity of natural and melt-grown crystals 0=13943
- NaCl, α and β absorpt. bands in vacuum u.v. 3=8590
- NaCl, alpha and beta bands 1=993
- NaCl, α and β bands, vac. u.v. absorption 1=3839
- NaCl, α -centres, fluorescence 3=17796
- NaCl, α -irradiated, thermoluminescent kinetics 4=13084
- NaCl, anisotropic surface, under rolling cylinder, resistance 0=13920
- NaCl, anisotropy of elec. strength 2=6528
- NaCl, aq. solns., with CaCO_3 , 350–500°C. 100–1800 atm 1=15863
- NaCl aq. soln., proton relax., rel. to concentration 4=27199
- NaCl, aqueous, conductivity, electrical, 300–383° 3=18449
- NaCl, aqueous soln., dielec. props. 2=9286
- NaCl, in atmosphere, vertical distrib. 2=2468
- NaCl, band structure, orthogonalized wave functions 4=6789
- NaCl, bent crystal, motion of charged dislocations 2=14443
- NaCl, bonds broken at atomically flat surface 2=14932
- NaCl, Born repulsive energy 3=2690
- NaCl, breakdown discharge formation 2=21222
- NaCl, breakdown, electric—thermal generalization 1=19843
- NaCl, breakdown, electric—thermal generalization 2=6434
- NaCl, breakdown energy 0=16026
- NaCl, brittleness, effect of ambient air 0=1872
- NaCl, Ca, Cd, Co doped, F and Z bands 3=13012
- NaCl, Ca impurity—cation vacancy pairs, interaction with dislocations 4=22571
- NaCl, with Ca impurity, dielectric losses 1=1128
- NaCl, with Ca impurity, Z-centres 1=3694
- NaCl, Ca^{2+} doped, surface hardness meas. 4=23208
- NaCl, cation and anion migration barriers 0=4306
- NaCl, cation vacancy migration, activation energy 3=12962
- NaCl, cavity formation on dislocations 0=11622
- NaCl, CdCl_2 -doped, quenching of cation vacancies 1=17513
- NaCl, CdCl_2 -doped, strain ageing 3=16002
- NaCl, charge on dislocations, calc. 2=14444
- NaCl, charge separation due to disloc. motion 4=9960
- NaCl, charged dislocation behaviour 3=8435
- NaCl, charged dislocations 1=14275
- NaCl, charged dislocations 1=19778
- NaCl, charged dislocations, motion in bent crystal 2=14443
- NaCl, charged dislocations rel. to pinning points 4=1484
- NaCl, charged dislocations, sign of 3=25278
- NaCl, charged dislocations, sign of charge 2=18582
- NaCl, charged dislocations, yield stress minimum 3=798
- NaCl, charged dislocs., surface detection 3=22776

Sodium compounds—contd

- NaCl, charging by rubbing with Ta wire 3=2966
 NaCl, Cl interstitial, relax. energy and distortion effects 4=12735
 NaCl cleavage face reflect., Kikuchi line intensity increase 2=8819
 NaCl, cleavage structure, effect of inhomogeneities 2=19042
 NaCl cleavage surf. fracture, rel. to annealing 2=8746
 NaCl, cleavage surface behaviour, etch pits 0=3187-8
 NaCl, cleaved, evaporation decoration by Ni, Permalloy films 3=20931
 NaCl, coalescence of pores 1=4075
 NaCl, coalescence of pores 1=10276
 NaCl, CoCl₂ precipitation, Mössbauer study 3=22630
 NaCl, colloids in additively coloured crystals 0=9911
 NaCl, coloration by exo-electrons 2=12469
 NaCl, colour centre energy levels rel. to absorption spectra 2=23212
 NaCl, colour centre, F, struct. magneto, optical study at 1.86°K 4=17449
 NaCl, colour centre formation by γ -irradiation 0=17962
 NaCl, colour centre, Zeeman effect search 4=30583
 NaCl, colour centres due to electron pulses 3=8460
 NaCl, colour centres and thermal bleaching 2=16668
 NaCl, colour centres, X-ray prod. 3=25297
 NaCl, coloured by Ag⁺ and Ca²⁺, F⁻, Ag colloid- and B-bands 4=22679
 NaCl coloured crystals, thermoluminescence, spectral composition 1=14662
 NaCl, coloured, optical and elec. props. 0=18072
 NaCl, colouring by electron bombardment 1=17570
 NaCl, compressibility, elec. cond. eqn. of state, 50-800 katm 0=20730
 NaCl, compressive strength, effect of Ca²⁺ additions 4=23207
 NaCl, conduction electron wave-function and energy 1=7552-3
 NaCl, conductivity, thermal, with CaCl₂ impurity, temp. var. 3=20120
 NaCl, conductivity, thermal effects of Li⁺, I⁻, Rb⁺, Ag⁺, Br⁻, K⁺ impurities 3=22644
 NaCl containing impurities, defect microscopic investigation by evaporation method 4=28451
 NaCl containing 0.3% AgCl, thermoluminescence and thermally stimulated cond. model 4=10210
 NaCl containing Ca²⁺ and Sr²⁺, Z-centre energy levels 4=28500
 NaCl, corundum powder abrasion and heat treatment 2=4352
 NaCl, creep near m.p. under small loads 4=1961
 NaCl, creep, 500°-750° C, temp. and stress depend. 4=4488
 NaCl, crystal face growth patterns, on heating, impurity effects 4=4553
 NaCl crystal further growth in solution and vapour, rel. to plastic deformation 4=13548
 NaCl, crystal growth, adsorption at crystal-solution boundary 4=20736
 NaCl, crystal growth condensation of Ag, in air and vacuo 4=13547
 NaCl, crystal growth, effect of organic solutes 2=8789
 NaCl, crystal interstitials due to H₂O, thermal and acoustic effects 4=17351
 NaCl, crystal lattice vibr. calc. 4=28361
 NaCl, crystal phonon scatt., with CaCl₂ impurity 3=20120
 NaCl, crystal phonon scatt. by Li⁺, I⁻, Rb⁺, Ag⁺, Br⁻, K⁺ impurities 3=22644
 NaCl, crystal plates, evaporation figures 0=7891
 NaCl, crystal structure, amplitudes, high $(\sin \theta)/\lambda$ 3=13454
 NaCl crystal whiskers, dislocations, by X-ray diffr. 3=17748
 NaCl, crystal X-ray diffr. and transmission, var. with temp. 4=7642
 NaCl, crystallization, holes and mosaic structure 3=1263
 NaCl, crystallization "Morphodrome" from phase diagram 3=16042
 NaCl, crystallization, supersaturation, impurities, and crystal form 4=13514
 NaCl crystals, additively coloured, electron microscopy 2=12955
 NaCl crystals, breakdown in electric field 1=12479
 NaCl crystals, deformation and crack structure caused by impact treatment 4=30787

Sodium compounds—contd

- NaCl crystals, doped with divalent cations, ionic cond. 4=17467
 NaCl crystals, elec. field effect on photostimulated exoelectron emission 4=24721
 NaCl crystals, n.m.r. of Na²³ 1=2497
 NaCl crystals, neutron diffraction spin-orbit interaction 3=18294
 NaCl crystals with Ni, line scattering images 4=15597
 NaCl crystals, strained, elec. cond. 2=8302
 NaCl crystals, u.v. absorpt. 3=929
 NaCl crystals, X-ray, photoconductivity 3=4955
 NaCl, Cu diffusion, effect of dislocations 3=15513
 NaCl, Cu-doped, colour centres 1=14336
 NaCl, cyclic stressing, electrical effects 0=7917
 NaCl, damage by sliding and wear 3=11189
 NaCl, "debris" left by moving dislocations, etch-pit study 1=3678
 NaCl, Debye temp., Houston and Blackman methods of evaluation 4=12651
 NaCl, Debye-Walker factors calc. 4=22481
 NaCl, decomposition by electron irradi. 3=17809
 NaCl, decoration of defects by reduction with Zn 1=3677
 NaCl defect properties rel. to electrical breakdown 1=11215
 NaCl defect properties rel. to electrical breakdown 1=12391
 NaCl, defects study, methods review 2=8225
 NaCl, deformation region after impact treatment 4=4487
 NaCl, deformed, u.s. absorption and velocity, various dependences 1=17406
 NaCl, dielec. loss, effect of OH⁻ content 2=12558
 NaCl, dielec. losses, effect of CO₃²⁻ and OH⁻ groups 3=20375
 NaCl, dielec. losses, effect of hydrolysis 4=20409
 NaCl, dielec. props. and thermolum. after X-irrad. 3=8479
 NaCl, dielect. strength, -130° to 150°C 0=1708
 NaCl, dielectric const., 8 mm, by shorted-line waveguide 3=22973
 NaCl, dielectric relaxation due to impurity-vacancy complexes 1=6189
 NaCl, diffraction of 8-45 Mc/s ultrasound 3=12918
 NaCl, diffusion of Cd, meas. from colloidal coloration 4=28491
 NaCl, diffusion of I⁻ 1=7594-5
 NaCl, discharge path in crystal 0=19632
 NaCl, disk-shaped cleavage surface 1=14917
 NaCl, disloc. distrib. near subgrain boundary 4=17429
 NaCl, dislocation charges, temp. depend. 4=1483
 NaCl, dislocation damping 2=21408
 NaCl, dislocation damping 3=17762
 NaCl, dislocation density and flow stress 1=14287
 NaCl, dislocation density and flow stress 4=28467
 NaCl, dislocation etch pit formation 1=12616
 NaCl, dislocation glide steps 1=19787
 NaCl, dislocation jumps 4=1478
 NaCl, dislocation motion and plastic flow 2=16954-5
 NaCl, dislocation motion study 3=17759
 NaCl, dislocation pinning by visible light 2=21035
 NaCl, dislocation relax. rel. to u. s. absorpt. coeffs. 4=28454
 NaCl, dislocation unpinning by visible light 2=10389
 NaCl, dislocations 3=17757
 NaCl, dislocations, Au decorated replica 0=9899
 NaCl, dislocations, deformed by concentrated load 3=20183
 NaCl, dislocations, distrib. near scratches 4=1476
 NaCl, dislocations, e.s.r. trapped Mn ions 2=4261
 NaCl, dislocations, etching technique 3=1258
 NaCl, dislocations in glide bands, birefringence obs. 1=14261
 NaCl, dislocations, linear cpds. with Cu²⁺ ions 3=25280
 NaCl, dislocations, meas. using u.s. 3=15491
 NaCl, dislocations and, new layer growth on mono-crystals 2=4376
 NaCl, dislocations, X-ray diffr. topography 0=1587
 NaCl, dispersion, 0.3-3.0 mm wavelength 0=628
 NaCl, dissolution in glycerol 2=15581
 NaCl, dissolution spiral structures, etch study 4=2019
 NaCl, doped, ionic conductivity processes 2=12501
 NaCl, doped with NO₂, paramag. res. 2=4248
 NaCl, drop growth in humid air stream 1=11746
 NaCl, ductile-brittle transition 0=21145

Sodium compounds—contd

- NaCl, ductility 0=10262
 NaCl, ductility and strength 0=6306
 NaCl, dynamical effects of X-ray interference 2=6860
 NaCl, e.s.r. of F⁻centres 1=20222
 NaCl, e.s.r. of Mn²⁺-F⁻ pair 1=14801
 NaCl, effect of etching on dislocation sites 4=2020
 NaCl, effect of imperfections on Cl ion diffusion 1=14323
 NaCl, effect of internal friction on Young's modulus 1=20307
 NaCl, effect of irradiation intensity on F-centre production 2=18616
 NaCl, effect of neutron irradiation on dielectric and optical props. 1=12468
 NaCl, effect of Pb impurity on optical absorption 1=4983
 NaCl, effect of pressure on elec. and mech. props. 1=11271
 NaCl, effect of sudden pressure on elec. cond. 0=17993
 NaCl, effect of surface steps on crystal surfaces 1=3995
 NaCl, effective Debye temp., vibration frequency spectra 0=20743
 NaCl, elastic deform., effect on Na²³ n.m.r. 2=786
 NaCl, elastic deformation round dislocations 4=12766
 NaCl, elastic fatigue, damping decrement dependence on no. of cycles 0=21119
 NaCl, elec. cond. and colour centres 0=15880
 NaCl, elec. cond. of deformed crystals 3=890
 NaCl, elec. potential due to plastic deformation 3=900
 NaCl, elec. strength, effect of ionic conduction 1=2435
 NaCl, electric breakdown, characteristics 2=676
 NaCl, electric strength, effect of u.v. irradiation 2=16794, 18779
 NaCl, electrical conductivity, rel. to anion impurities 3=17944
 NaCl, electrical conductivity, effect of air and water vapour 4=1653
 NaCl, electrical conductivity during creep at high temp. 1=10034
 NaCl, electrical effects of cyclic mech. stressing 1=14933
 NaCl, electrical signal due to motion of dislocations 1=5043
 NaCl, electrification by X-irradiation 0=3714
 NaCl, electron density in atoms, fourier integral method 0=18351
 NaCl, electron bombard. electron emission and coloration 2=9623
 NaCl, electron density distrib. in crystals 1=15072
 NaCl, electron emission, electron- and α -excited 1=8344
 NaCl, electron energy loss spectra 2=3889
 NaCl, electron secondary emission by Li and K ion bombardment 1=11965
 NaCl, electron spin resonance of F-centres 0=8087
 NaCl, electron transition rel. to β -band 4=9883
 NaCl, electrostriction coeffs. 0=11750
 NaCl, elementary slip steps, electron micr. study 2=12859
 NaCl, enthalpy 3=25198
 NaCl, eqn. of state, Grüneisen const. 3=25205
 NaCl, eqns. of state, rel. to compression data 3=22670
 NaCl, equation of state 3=15447
 NaCl, equation of state, Grüneisen approx., temp. var., calc. 3=20115
 NaCl, etch pits rel. to purity 1=20414
 NaCl, evaporated films, sintering, mechanism 3=25777
 NaCl, evaporation, complex-ion formation, ion-molecule reactions 0=10876
 NaCl, with excess electron, wave-function and energy 3=22679
 NaCl, exchange of Cl³⁵ with halogen gases 1=4076
 NaCl, exciton scattering on U-centres 1=19812
 NaCl, exciton scattering on U-centres 2=8257
 NaCl, exciton structure, LCAO calc. 0=13524
 NaCl, exo-electron emission 1=16357
 NaCl, exo-electron emission, effect of retrapping 2=22244
 NaCl, exoelectron emission spectrum 3=14618
 NaCl, F-band width, calc. 0=13554
 NaCl, F-centre absorpt. and emission, temp. depend. 4=25970
 NaCl, F-centre absorption due to pressure 2=8254
 NaCl, F-centre conc. and relaxation time 0=16161
 NaCl, F-centre formation by X-rays 1=8923

Sodium compounds—contd

- NaCl, F-centre, prod. efficiencies at liq. He temp. 4=12810
 NaCl, F-centre electrons, spin-lattice relaxation time, 300°K 0=16160
 NaCl, F-centre formation by X-rays 3=13011
 NaCl, F-centre stability 0=9907
 NaCl, F-centres, electron-nuclear double reson. 2=12471
 NaCl, F-centres, electron-nuclear double spin res. 2=6388
 NaCl, F-centres, origin by X-irrad. 3=15518
 NaCl, F-centres after X-irrad., stored energy 3=2839
 NaCl, F colour centres, X-ray formation 3=22844
 NaCl faces, reaction with H₂O, O₂ and N₂ 2=4400
 NaCl, Fe²⁺ vacancy-impurity association 3=22631
 NaCl films, condensed in vacuo, electron diffr. 2=15091
 NaCl films, electron diffraction intensities rel. to tilting and λH 3=1295
 NaCl films, electron microscopy 4=2113
 NaCl, films, electron reflection 0=3793
 NaCl, films, orientation, var. with vapour stream angle, by electron diffr. 3=13561
 NaCl films, rapidly condensed, orientation 3=8799
 NaCl, films, secondary electron emission 0=3792-3, 10940
 NaCl films, X-ray study of second type stresses 1=1451
 NaCl, flexural vibrations of plates 2=13394
 NaCl, fluorescence spectra 1=10109
 NaCl, frequency distrib. and sp. ht. at low temp. 1=2378
 NaCl, frequency distribution and specific heat 3=25188
 NaCl, frozen aq. soln., concentration profiles 0=6048
 NaCl, fused, refractive index rel. to temperature 3=11796
 NaCl, fused, thermoelectric power 3=9477
 NaCl, γ -irrad., internal friction and elastic modulus, rel. to dislocation pinning 2=21404
 NaCl, γ -irradiation, influence of deformation and temperature 1=11247
 NaCl, grain boundaries, low-angle, annealing displacement 4=15481
 NaCl, grain boundary effect on plastic deform. 4=23209
 NaCl, grain boundary motion in bicrystals 2=14452
 NaCl, growth and deformation of whiskers 1=20448

 Co—Pd, dilute, ferromagnetism down to 0.1 at.% Co 1=9022
 Cr—Ni system, equil. diagram 3=11289
 Cr₂O₃ in In₂O₃, rel. to absorpt. bands 2=21248
 Cr—Te—Se, elec. and mag. props. 1=17619
 CsCl type, heat of formation 3=18230
 Cu-base, local atomic displacements meas. 3=3341
 Cu-based, crystal structure and energy-band structure 1=4061
 Cu, deformation and X-ray diffr. pattern broadening 0=1910
 Cu, dilute, n.m.r. at low temps. 0=18225
 Cu ions in AgCl, optical props. 2=4136
 Cu—Al, ordering 2=23882
 Cu—Al, segregation of Al to stacking faults 0=21241
 Cu—Al stacking faults, solute atoms effect 2=600
 CuAu, short-range order and X-ray scattering 1=20490
 Cu₃Au-type, short-range order 2=10920
 Cu—Be(Au, Ag), annealing stage I, rel. to concentration 3=8468
 α Cu—Cd, dissolution of a β precipitate 1=1427
 Cu in Ge, decomp., X-ray study 0=21192
 Cu—Ge, supersaturated, decomposition, elec. props. and X-ray diffr. study 1=15159

Solid solutions—contd

- Cu-In, mag. susceptibility 0=13731
 Cu-Mg, resistance minimum 0=20862
 Cu-Mn, magnetic susceptibility 1=17933
 Cu-Ni, composition distrib., X-ray diffraction study 1=20618
 Cu-Ni stacking faults, solute atoms effect 2=600
 Cu-O after annealing 2=12962
 Cu_{0.6}Pd_{0.4}, enthalpy of formation 2=21540
 Cu-Sb, intercrystalline internal adsorption, X-ray scatt. study 2=23934
 Cu-Sb, mag. susceptibility 0=13731
 Cu-Sn, intercrystalline internal adsorption, X-ray scatt. study 2=23934
 Cu-Sn, mag. susceptibility 0=13731
 Cu-Sn, plasticity drop, theory 1=10215
 Cu-Zn stacking faults, solute atoms effect 2=600
 Cu-Zn-Mn, lattice parameters 1=15158
 Cu-Zn-Ni, thermodynamic props. 2=6837
 FeAl, in diffusion formed Fe-Al alloys 2=17051
 Fe-Al, mechanical strength 3=6798
 FeAl₂O₄, mag. props. 0=11829
 Fe, Ce distrib. on sub-boundary zones 3=20229
 Fe, effect of deformation on internal friction 0=1845
 Fe-Ge, with Sb and P 0=16351
 Fe-Ni, single crystals, slow deformation at high temp. 1=10212
 Fe-Ni-C system, thermodynamics 3=5117
 FeO in MgO, mag. susceptibility measurements 1=1214
 Fe₃O₄ in NiZn ferrites 1=6487
 Fe₃O₄, mag. props. 0=11829
 FeO-FeVO₃, antiferromagnetism 0=11914
 Fe-P, lattice parameters, solubility 0=18348
 FeTiO₃-α-Fe₂O₃ system, ferrimag. props., rel. to crystal structure 1=11455
 FeTiO₃-Fe₂O₃, heat treated, mag. props., order-disorder transform. 0=670
 0.6 FeTiO₃-0.4 Fe₂O₃, reverse thermoremanent magnetization 0=8041
 α-Fe-W, various props., W-conc. depend. 1=4060
 Ga in superconductor, mag. susceptibility and Curie point calc. 0=18160
 GaAs-Ga₂Se₃, structure and elec. props. 1=19877
 Ga in In, supercond., critical temp. 2=7494
 GaSb-Ge, pseudo-binary system 0=18402
 GaSb-InSb, extent of solid soln. from crystal-pulling expts. 2=19102
 GaSb-InSb, prep., equilibrium and elec. props. 0=730
 GaSe-GaS, photoconductivity 0=15989
 Ga₂Te₃ with A^{II}B^{VI} tellurides, formation and props. 1=7878
 GdRu₂-CeRu₂, superconduction, mag. props. 0=11844
 Ge, impurity solubility max-rel. to distrib. 2=17054
 Ge, solubilities, of Al and Ca 0=12080
 Ge-Fe, Ni, Co, annealing effects 0=15863
 Ge in α-Fe, X-ray, metallographic, microhardness, and magnetic meas. 3=3340
 Ge-Ga, X-ray emission spectrum 1=17904
 Ge-Sb, X-ray emission spectrum 1=17904
 Ge-Si, positive excess entropy 0=1641
 Ge-Si, thermodynamic props. 0=4685
 H in metals, embrittlement 2=8744
 H, ortho and para, free energy 2=18541, 23095
 H-D, mutual solubility at 4.2°K 0=12099
 H-D systems, solid-liquid phase diagrams 3=21612
 Hf-H, thermodyn. props. and phase relns. 2=23808
 Hg[Cd]Te-In₂[Ga₂]Te₃, structure and semicond. properties 3=11301
 HgSe-HgTe, semiconducting properties 1=17753
 HgTe-MnTe, zinc blende type, phase diagram 3=13543
 HgTe-ZnTe 0=12083
 In basis, semicond., complex, structures, props. 2=17053
 InAs-based quaternary systems 0=10327
 InAs-GaAs structure 1=11594
 InAs-In₂Se₃, optical absorption edge 0=16057
 InAs-In₂Te₃, optical absorption edge 0=16057
 InSb-AlSb, Nernst-Ettingshausen effect 1=11267
 InSb-based quaternary systems 0=10327
 InSb-GaSb, magnetic susceptibility 1=20049
 InSb-GaSb structure 1=11594
 InSb-GaSb, thermodynamic props. 0=4685

Solid solutions—contd

- In₂Te₃ with A^{II}B^{VI} tellurides, lattice parameters and ordering 1=20621
 In₂Te₃ in Bi₂Te₃, mechanism 1=20620
 In₂Te₃ in Sb₂Te₃, mechanism 1=20620
 KBr-KCl, formed by powder compression, kinetics 2=23799
 K(Cl, Br), dispersion coeff. 2=17052
 KCl-KBr, configurational free energy 0=12071
 KCl-KBr, diffuse X-ray scattering 0=16323
 KCl-KBr, phonon scatt. by point defects at liquid He temp., from thermal cond. 0=13506
 KCl-KBr system, domains of separation 2=12897
 K (Mn, Co, Ni) F₃, superexchange interaction 3=25553
 (K,Na)Cl solns., formation and liquidation of heterogeneous regions 1=1357
 Li in GaAs, elec. and chem. study 2=18599
 M₃²⁺Fe₂Sn₃O₁₂-Y₃Fe₂Fe₃O₁₂, M = Cd, Zn, Mn, Ni, Mg. 0=6359
 Mg, lattice spacings 0=21195
 Mg-Al, α-type, slip lines, rel. to Mg composition 1=11515
 Mg-Fe eutectic meas. 3=11299
 Mg₂Si, ageing 2=2331
 Mn ferrites, effects of oxidation 2=4232
 Mn_{1-x}Fe_{2-x}O₄, hysteresis loop 1=17955
 Mn-Zn fluoride, antiferromagnetic susceptibilities 1=20168
 NaCl-AgCl, formation 2=14925
 NaCl-CdCl₂, hyperstructure regions 2=21521
 NaCl-NaBr, structure, theory 2=21456
 Na-K-Cl-Br ternary system, phase diagram 1=20614
 NaI, with up to 2.6 mol. % TlI 0=16356
 NaNbO₃-PbZrO₃, prep., antiferro- and ferroelec. props. 0=11746
 Nb-N, terminal, metal-gas equil. 3=11298
 Nb-O interstitial, superconducting, H_{c3}/H_{c2} ratio, Saint-James-de Gennes calc. 4=29839
 Ni ferrite, Ni solubility 2=2415
 Ni-rich α-solutions, interdiffusion of Cr and Mo 1=985
 Ni-Cr, elec. resistance and thermolec. power 1=5034
 Ni-Cu, fine structure investigation 0=6380
 Ni-Fe-O system, phase equilibria in ferrite region 2=2404
 NiFeO₄-Fe₂O₃, lattice dimension and α-Fe₂O₃ precipitation 1=12641
 NiO-MgO and MnO, activity of NiO 2=2414
 Ni-Sn, unstable, creep and fracture observations 2=4328
 Ni-Ti, elec. resistance and thermolec. power 1=5034
 Ni-Ti, supersaturated, decomposition 1=15133
 Ni-Ti-Cr, supersaturated, decomposition 1=15133
 Ni-V, elec. resistance and thermolec. power 1=5034
 NiZn ferrites, with ferric oxide 0=21232
 Pb, ageing mechanism 1=15151
 Pb-Ba metaniobate, piezoelectricity 2=14635
 Pb and Bi tellurides, carrier scattering 0=2890
 Pb-Mg, lattice parameters and zone overlap 0=16315
 with Pb₂MgWO₆, antiferroelec. and ferroelec. props. 0=7978
 PbMg_{1/2}W_{1/2}O₃, antiferroelectric properties 1=12478
 PbNb₂O₆-BaNb₂O₆-SrNb₂O₆, ferroelectric props. 0=6154
 Pb₂NiNb₂O₉-Pb₃MgNb₂O₉, crystal structure 1=11572
 Pb₃NiNb₂O₉-Pb₃MgNb₂O₉, polarization mechanism 0=629
 PbSe-Bi₂Se₃ system, rel. to composition 3=25742
 PbTiO₃ in BaTiO₃, ferroelectric meas. 1=17843
 PbTiO₃-SrSnO₃, crystal structure and diel. props. 1=20575
 PbTiO₃-SrTiO₃-Bi₂TiO₃, ferroelec. polarization 2=12568
 Pb-Tl, self-diffusion of Pb, Tl and Bi 2=3941
 Pd-W, Pd-Mo, K-state formation 2=21093
 Pt-Ag, solution formation due to spark discharges 0=16352
 δ Pu-Al, elec. and thermal props. rel. to order-disorder change 1=20622
 Sb₂Bi_{2-x}Te_{3-x}Se₂ system 1=19867
 Sb₂S₃-Sb₂Te₃, elec. props., composition depend. 2=8352
 Sb-Sn, solubility curves 1=15160
 Sb₂Te₃-Bi₂Te₃, elec. and thermolec. props. 2=4079, 8449
 Sb₂Te₃-Bi₂Te₃, thermolec. props., effect of impurities 0=18079
 SbZn-SbCd, thermolec. props. 0=16002
 Se-Te, X-ray study 0=12077
 Si, doped, solubility in crystal growth 2=10382

Solid solutions--contd

- in Si, excess entropy 0=1641
 Si, impurity solubility max. rel. to distrib. 2=17054
 Si-Ni, Ni solubility, 900° to 1350°C 3=3338
 Sn, grain boundary segreg. of Ti 3=16118
 Sn-Ag alloys, solute distrib. after solidification 3=16119
 (Sr, Pb)(Ti, Zr)O₃, phase diagram., dielec. and piezoelec. props. 0=21236
 Sr₃(PO₄)₂ systems 2=4177
 SrTiO₃ in BaTiO₃, ferroelectric meas. 1=17843
 SrTiO₃-Bi₂O₃.nTiO₂, relaxation polarization and phase composition 1=14538
 Ta-H, dilute, phase instability 2=2413
 Ta-H, thermodynamics 300°-700°C 2=19026
 Te-S, energy gap and carrier mobility, S depend. 1=1086
 Te-Se, energy gap and carrier mobility, Se depend. 1=1086
 ThO₂-CaO dielec. and mechanical relaxation 3=20700
 Ti, with ferromag. solutes, superconducting transition temp. 0=1079
 TiC-TiN, X-ray absorption spectra 2=707, 8541
 Ti-Cr alloys, β -type 3=22898
 Ti-Cu, decomposition 0=16353
 Ti-Mo, short-range order and size effect 1=20617
 Tl, with In, Bi or Pb, superconductivity 1=10642
 U-Cd, U-Zn, Ce-Zn systems, phase diagrams 2=6822
 UO₂, with foreign elements, in U₂O₈ \rightarrow UO₂ trans-form. 3=25765
 V-Cr, mag. susceptibility 1=1195
 VO₂-TiO₂, mag. susceptibility, 25-90°C, composition depend. 0=18166
 W carbide-Co, Lorenz number, thermal and elec. cond. 1=925
 Xe and Kr 0=8846
 Zn, Cd, γ -Sb, elec. props., single-phase prod. 0=2903-4
 ZnFe₂O₄-NiFe₂O₄ system, superparamagnetism 3=8645
 Zn₃(PO₄)₂-Mg₃(PO₄)₂, phase equilibria and Mn-activated fluorescence 0=2953
 ZnSb-CdSb, ordering, elec. props. 2=18762
 ZnSb-CdSb system 3=1348
 ZnSe-GaAs, existence of continuous series 0=729
 ZnSe and ZnTe, in CdS, solubility 3=4886
 Zr, solubility in α -Th 2=4474-5
 ZrO₂, irradiation-induced phase trans-formations 0=21211
 Zr-ZrO₂ system, solubility of O₂ in α -Zr, Zr in ZrO₂ 2=4459

 sphalerite structure, dislocation cores, theory 3=2793
 spin config. in crystals, group theory investigation 2=550
 spinels, short and long-range order 3=18224
 stability of non-stoichiometric compounds 0=13516
 statistics of dimers on lattice 2=1072
 superlattices, quantum-mechanical representation 0=1536
 symmetry, geometrical anal. 0=6004
 texture antisymmetry, with infinity-fold axes 0=12057
 transition metal carbide solid solns., C atom charges 4=12573
 transition metal semiconducting cpds, crystal chemistry 0=13932
 Udimet 700 Ni base alloy, solute distrib. near grain boundaries 4=13464
 vacancy coalescence and macro-defect form. on cooling 0=6046
 wüstite, O/Fe ratio rel. to oxygen press. 3=5076
 Al, crystallite orientation distrib. 3=25783
 Al, substructure formation during deformation, high temp. high strain rate 4=26492
 Al—Cd—Sn alloys, solid Sn rich 4=13471
 Al—CuAl₂, thin film, equilib. diag. 2=1072
 Al—14% Mn alloy, intergranular cavities, rel. to grain size 4=30866
 Al—Zn (10-98 wt. %), and heat cycling, effect on internal friction and elongation 4=13389
 Al—Zn—Mg, microstructural damage produced by glide 4=23127
 Au alloys, grain boundary delineation by rapid cooling 4=10581
 Au_{0.95}Fe_{0.05}, magnetic ordering 4=17651
 Au—Pd, short range order, X-ray exam. 4=13645
 BN, donor-acceptor bond 0=4255
 Bi₂Te₃ and CdI₂ types, bonding and semiconducting relationships 0=15945
 C, black, particles, internal, and oxides, by electron microscope 3=25804
 C, new phase above 150 kbar 3=18229
 CdI₂, 3 layer, bonding scheme 0=15945
 CdS, changes 4=13508
 CdTe, changes 4=13508
 Co nuclear alignment, at 0.04°K 0=4285
 Co²⁺ site preference, effect of anion charge compensation 3=18222
 Co and Co-25% Ni, structure indicative of martensitic shearing 0=21207
 Cr—Ni, at high temperatures up to 1260°C 4=26538
 Cu, dislocations and oxide nuclei, correlation 0=17934
 Cu, grain size, effect on fatigue strength 4=28940
 Cu, quadrupole interaction of nuclei 3=13318
 Cu, substructure formation during deformation, high temp. high strain rate 4=26492
 Cu—Al solid soln., short-range order, kinetics of variation 4=17747
 Cu—Al solid solns., short-range order, temp. depend. 4=15723
 Cu, Al, Ni, changes, during deformation at high temp. 2=2320
 Cu₃Au, ordering changes on cold working and annealing 4=7485
 β-CuZn, long-range interactions, rel. to ordering 4=13482
 (Er, Y)₂O₃, equiv. Er ions interact. 3=10565
 Fe—Al, short-range order, by diffuse X-ray scatt. 4=15789
 Fe—C alloys, and freezing nucleation undercooling 4=21352
 Fe—C, prep. by electron bombardment, composition analysis 2=23800
 Fe—Ni, microstructure, after γ-α and γ-α-γ transformations 2=23929
 Fe₂O₃—BaO, phase equilib., 3=6812
 Fe(1.08%Si), rel. to ordinary magnetoresistance 2=8287
 GaP, changes 4=13508
 GaSb, amorphous state 4=30881

 LiF—KF molten system, molar mixing enthalpies 3=21338
 N, in polyethylene 0=12066
 N and C, in steel, cold-rolled, transformer 4=26541
 N and O in liq. H at 27°–33°K, meas. 2=11365
 N₂ in distilled water 4=11184
 N₂ in Be, X-ray diffraction study 3=20908
 N₂ in H₂O 4=159
 N₂ in H₂O, isotope effect 3=9450
 N₂ in Vycor glass 0=5051
 NH₃ in water, equil. between vapour and soln. 3=21336
 NaCl, effect on deformation under applied stress 0=10261
 NaNO₃ in NH₃ 2=15576
 NaOH, in water, rel. to freezing point 3=7387
 Ne, in Vycor glass 0=5051
 Ni, in Be, X-ray diffraction study 3=20908
 Ni in liquid Na, determ. by tracer technique 2=5008
 Ni in Ni ferrite 2=2415
 Ni, solubility of H and D 1=6114
 Ni, solubility of H and D 1=11227
 NiFeO₂—Fe₂O₃, rel. to temp. 1=12641
 Ni in Si, meas. 4=4497
 Ni in Si, solid, 900° to 1350°C 3=3338
 Ni in Si, solid-solubility meas. 4=4497
 O₂ in distilled water 4=11184
 O₂ in Be, X-ray diffraction study 3=20908
 O₂ in Ge, meas. by i.r. absorption 1=3662
 O₂ in H₂O 4=159
 O₂ in H₂O, isotope effect 3=9450
 O₂ in Nb alloys, rel. to magnetic susceptibility 1=20040
 O₂ in Si 3=15579
 O₂—CF₄ liquid system 3=21334
 P, in Fe 0=18348
 PbTe, in GeTe and SnTe 2=17055
 Pu, in Al, 600°C 1=17561
 S, in methanol and petroleum, and phase transform., β - γ , -88.5°C 4=23288
 Sb, in solid Sn 1=15160
 in Sc, solid, of impurity elements 0=18396
 Se, in liquid metals 0=19119
 Si, of impurities, maximum, and m.p. distrib. coeff. 3=20910
 Si, anodic dissolution 2=857
 Si, interstitial impurities, theory 1=17506
 Sn in GaP, in growth 4=28999
 Sn, in Ge 1=11583
 SnTe, in GeTe and PbTe 2=17055
 Ta, in Ge, temp. and elec. cond. depend. 0=1599
 Te, in Ge 2=21063
 Te, in Ge 3=2825
 Ti, in Ag metal 1=15162
 Ti, in Be, X-ray diffraction study 3=20908
 Ti, in Ge 2=12460, 14465
 TII, in NaI crystals 0=16356
 WC in Co, rel. to temp. 1=9144
 Y, in Be, X-ray diffraction study 3=20908
 Zn-blende-type binary cpds., mutual, rel. to semicond. props. 2=23414
 Zn, in Cu, at 153–260°C 2=15072
 Zn, in GaAs 3=16122
 Zn, in GaAs and GaP, 700° to 1100°C 4=13458
 Zn, in GaP 3=10686
 Zn, Sn, and Ag, in liquid Hg 4=5156
 Zn, in solid Mg 2=17056
 Zn from vapour in ZnO powder 1=2395
 Zn—Sn—Bi system, miscibility gap, calc. from thermodynamic functions 1=142
 ZnAl₂O₄, in molten PbF₂ 4=29614
 Zn in GaP 4=12790
 Zn in InP, 600°–900°C meas. 4=22619
 Zr, in Be, X-ray diffraction study 3=20908

Solutions

See also Heat of solution; Liquids; Solid solutions
 absorption, light, var. with intensity 4=16241
 acetone and isopropanol mixtures, boiling pt. and surface tension 1=15858

Solutions—contd

- acetone, in various solvents, dielec. props., structure 3=21386
 acetone—water, light scatt., Rayleigh, and hypersound dispersion, density and concn. fluctuations 1=4341
 acetonitrile, O₂, u.v. absorption spectra 2=5020
 acids, inorganic, compressibility, formula 1=1736
 acids, strong H₃O⁺ and OH[−] n.m.r. proton shifts 4=5212
 acriflavine, fluorescence lifetimes 4=29636
 activity coeffs., for binary, thermodynamic, consistency, 15 tests 3=11788
 addition copolymers, electric birefringence, meas. 4=5179
 alcohols, aqueous, nuclear magnetic resonance due to proton exchange 1=8144
 aliphatic hydrocarbons, Cl-subst., in benzene and n-heptane, dielec. relax. 1=4353
 aliphatic primary alcohol—CS₂ binary system, miscibility gaps 3=23875
 alkali and alkaline earth halides in methanol, absorption spectra 4=2683
 alkali—halide—metal systems, nature of bonding 2=17449
 alkali halide solns., proton resonance shifts 1=8143
 alkali halides, rel. to crystal structure 2=10399
 alkali halides, supersaturated, latency times 3=21339
 alkali metal in molten alkali halide, conductivity, electrical 3=18829
 alkali metals, in alcohols, property fluctuations, light scatt. study 4=24174
 alkali metals in liquid ammonia, decomposition 2=2447
 alkali nitrate melts, $n \rightarrow \pi^*$ electronic transitions 1=6861
 n-alkane mixtures, volume contraction on mixing 0=3518
 alkylammonium salts, hydrogen bonding 4=22386
 alkyl chlorides, dilute solutions, dielectric relaxation 1=12896
 amides, i.r. and Raman spectra rel. to dimeric manifestations 2=7218
 amine—chloranil complexes, absorption spectra 3=1694
 amino acids, aq., with dissolved O₂, complex formation 2=6881
 ammonium ion, second-order effects in n.m.r. 1=8142
 aniline—cyclohexane, critical opalescence 2=17450
 aniline—cyclohexane mixtures, u.s. propagation 0=19131
 anilines, dilute solutions, dielectric relaxation 1=12895
 of anisotropic rods, luminous intensity 0=19449
 anthracene, dilute, Kramers—Kronig relation 3=16627
 aqueous, acoustic relaxation, meas. principles and methods 0=19124
 aqueous, adsorption on, two-dim. soln. model 2=9270
 aqueous, with D₂O isotope, effect on α - and β -irradiation 2=4557
 aqueous, decomposition by ionizing radiation, activity concept 0=1963
 aqueous, dielec. const. meas. method, dissipation const. up to $\tan \delta = 0.87$ 4=21150
 aqueous, dielectric constants 0=945
 aqueous, dielectric props., review 1=6868
 aqueous, e.s.r. spectrometers, sensitivity 3=17063
 aqueous, elec. cond. of proton, energy of activation 1=15901
 aqueous, enriched in O¹⁸, radiolysis 1=6577
 aqueous, equimolecular, speed of sound 4=8205
 aqueous electrolytes, acoustic velocity 4=29625
 aqueous, hydrated electron, absorption spectrum 3=6926
 aqueous, of hydrocarbons, model for thermodynamic props. 2=17444
 aqueous, n.m.r. of Li⁷, Na²³, Rb⁸⁷ with paramag. ions, chem. shifts 4=16128
 aqueous, n.m.r. study of O¹⁷ relaxation 2=19581
 aqueous, nitrates, compressibility 0=14640
 aqueous, nucl. relax. times, effect of C particles 2=5030
 aqueous, of 1-1 electrolytes, n.m.r. 2=7230
 aqueous, photo- and radiation chem. conversion of solvated electrons into H atoms 3=3405
 aqueous, positron annihilation in 0=9343
 aqueous, pressure effects on charge-transfer and transition metal ion spectra 3=1690
 aqueous, proton hydration enthalpy 3=21337
 aqueous, proton mobility and electron exchange 4=15833
 aqueous, radiation chemistry, pH dependence 2=10988

Solutions—contd

- aqueous salt solns., microdetermination 4=4721
 aqueous, of solutes, diffusion meas. apparatus test 4=27169
 aqueous, sound characteristics 2=19559
 aqueous, supercooling, rel. to structure 4=157
 aqueous, of surface-active agents, surface tension, dynamic props., h.f. standing capillary waves 1=130
 aqueous, X-ray irradi., yield of e and H atoms 3=3410
 aromatic cpds. in nonpolar solvents, electronic spectral shifts, dispersion theory 4=2688
 aromatics, condensed-ring, absorption spectra, effect of high pressure and low temp. 0=15733
 aromatics in solution, fluorescence decay 1=12888
 aromatics in solution, fluorescence decay 1=15889
 asphalt, deuterated, n.m.r., surface proton 4=5213
 asphalt, double resonance and proton relaxation 2=19582
 asphalt, paramag. resonance 2=2734
 asphaltene, electron-proton double resonance 3=7221
 associated ideal solns. 4=29613
 azide, photolysis of aqueous solns. 3=6922
 benzene-CCl₄, refractive index and dispersion 0=10667
 benzene, in CS₂ and CCl₄, proton spin-lattice relaxation 0=14664
 benzene-iso-octane, vapour-liquid equilibrium 0=6781
 benzene-methanol, refractive index and dispersion 0=10668
 benzene, O₂, u.v. absorption spectra 2=5020
 benzene-propyl alcohol, density distrib., near critical point of liquid-vapour system 4=24184
 benzene scintillators, luminescence decay times and energy transfer 0=19159
 benzene substituents, abnormal n.m.r. saturation behaviour 0=19170
 benzenes, monosubstituted, electronically excited, solvent effects 1=12278
 binary, effect of impurity on phase transt. 2=15579
 binary, hole theory 1=5269
 binary liquid mixtures, critical opalescence 2=17450
 binary metal solns., free surface energy, statistical electron theory 3=23485
 and binary mixtures, characteristic sound lines, adiabatically and isothermally measured 4=5177
 binary mixtures, eqns. of state 3=9451
 binary solutions, molec. scatt. power, in Raman scatt. 3=21372
 binary, transport props. 2=21905
 binary, ultrasonic wave propag. 1=18401
 biphenyl negative ion, e.s.r., exchange effects and anisotropy broadening 1=15906
 4,4'-bis (diphenylmethyl) biphenyl, trapping in solution 4=24241
 broadening of scattering line 0=3530
 bromides, aqueous solutions, ion exchange and approach distance 1=18398-9
 t-butanol, organic, n.m.r., p shift, and H bond 4=1251
 butyl alcohol, in water, proton relax., conc. depend. 4=21159
 butyl ether, of ethylene glycol, in water, light scatt. 4=24214
 calcite, in aq. solns. of 4 chlorides, 350-500°C, 100-1800 atm 1=15863
 capillary flow, exptl. re-evaluation 3=16597
 cellulose acetate in acetone, u.s. vels. 3=14161
 chain molecules, theory 1=8106
 chain mols., temp. depend. of excluded volume 4=8175
 chain-polymer, radial distrib. function and osmotic press. calc. 0=14641
 charge transfer and fluorescence quenching 0=19162
 chem. reacts. rel. to dielec. const. of solvent 2=17440, 19550
 chemical analysis X-ray, atomic numbers > 25 4=26771
 chlorides, aq., positron lifetime in 1=18436
 chlorobenzene, in CS₂ and CCl₄, proton spin-lattice relaxation 0=14664
 chloroform-CCl₄, dipole interactions 0=935
 chloroform in cyclohexane, self-association const. 2=2703
 chlorophyll, aggregation state, optical study 1=6863
 classical multicomponent fluids, theory 1=1050J
 collidine, in water, conc. fluctuations, ligh-scatt. study 3=21365
 complex mols., excited, solvent dipole reorientation 4=186

Solutions—contd

- complex organic cpds., viscous, photodichroism 3=23881
 complex mols., oscillator strengths from light dispersion 4=2681
 convective diffusion, of solute, in turbulent flow 0=78
 copolymer, light scattering 0=14851
 copolymer, sequence, study by light scattering 3=18443
 correlations at critical point 2=13326
 corresponding states theorem, appl. to viscosity and diffusion 1=138
 Cotton-Mouton effect 2=123
 critical mixtures, absorption and dispersion of sound 2=13336
 critical mixtures, heat capacity theory 2=13325
 critical opalescence, free energy, and density correlations 0=19093
 critical props. of mixtures 2=21897
 critical props. of mixtures 3=16844
 crystal growth, concentration distribution 0=4586
 cyclohexane binary liq. mixtures, thermodynamic props. 4=18191
 cyclohexane, in CS₂ and CCl₄, proton spin-lattice relaxation 0=14464
 cyclohexane as solvent for polar mols., effect on dielec. relaxation 4=197
 DNA, transition-metal binding 2=11393
 DPPH, proton hyperfine spectra 0=10680
 diamagnetic salts, spin-lattice quadrupole relaxation 0=8669
 dielectric constant, in strong elec. fields 0=19141
 dielectric constants, associated solutions 4=8217
 dielectric loss meas., with e.m. interferometer 0=10664
 dielectric phenomena, review 1=1125
 dielectric properties, behaviour at miscibility point 1=6871
 dielectric relaxation 0=5020-1
 diethyl ether solutions, of organic halides, photoconductivity 0=19151
 diffusion, Einstein's law, effect of solvent viscosity 0=14633
 diffusion kinetics, solute depletion 1=5274
 diffusion, near critical point 4=21113
 diffusion in solvents, with large molar volume 2=7203
 diffusion, thermal cross-coefficients, constancy 4=374
 diffusion in 3-component solns. near critical pt. 4=29618
 diffusion, of 3 ion species 3=21327
 dilute, dimensions of rigid particles 2=19557
 2,5-dimethylpyrazine in hydrocarbon and EPA glasses, solvent effects on n → π* transitions 0=15742
 dinitrobenzene, e.s.r. splitting consts rel. to colls. with solvent molecules 3=4776
 diphenyl cpds., in benzene, CCl₄ and heptane, microwave absorption, relaxation 0=19147
 diphenyloxazole in cyclohexane, fluorescence 2=7223
 diphenyloxazole in xylene soln., energy transfer 0=19161
 diphenyl picoyl hydrazil, in benzene, n.m.r., double, inverse Overhauser effect 4=1904
 diphenylanthracene/o-xylene solns., quenching and energy transfer 3=1702
 dipole moments det., validity of Higasi's method 0=5019
 discharges elec. between acids and Ni cathode a few mm away at 13 mm press. 4=24606
 dissociation of strong acids, n.m.r. meas. 0=3547
 distribution function of dissolved particles and moles. 4=24172
 dye, conc., fluoresc., absorpt. and dispersion of light 4=2682
 electric dipole and rotatory strengths, solvent field corrections 4=27176
 electrical conductivity, cluster expansion for Kubo-type expression 4=14185
 electrical conductivity, cluster theory for ionic solns. 4=14186
 electrolyte, aqueous solution model 1=15862
 electrolyte aqueous solution, molecular refraction 1=11761
 electrolyte, containing colloidal particles, light scatt. 4=14144
 electrolyte mixtures, compressibility, meas. and theory 2=11364
 electrolyte, rotational mechanical moments 1=15864

Solutions—contd

- electrolytes, adiabatic compressibilities, conc. depend. 0=19046
 electrolytes, aqueous, u.s. absorp. rel. to concn. 1=15870
 electrolytes, aq., u.s. velocity anomalies 1=15871
 electrolytes, compressibility, variation with temp. 0=6793
 electrolytes, Debye-Hückel theory, corrections 1=4275
 electrolytes, Debye-Hückel theory, fluctuations and limit of validity 0=938
 electrolytes, heat transport theory 0=5014
 electrolytes, i.r. spectra, ionic interactions with solvent molecules 3=21375
 electrolytes, ionic hydration, hydrodynamic theory 4=21101
 electrolytes in mixed solvents, densities and molar volumes 4=2659
 electrolytes, molal volume 4=167
 electrolytes, Raman spectra rel. to water 2=5022
 electrolytes, solvent dielec. const., effect on viscosity 3=21341
 electrolytes, strong, statistical-mechanical theory 0=14121-2
 electrolytes, surface tension, conc. depend. limiting law 4=16097
 electrolytes, thermal cond. and structure 2=21898
 electrolytes, thermal diffusion in, Soret coeff. for 18 solns. 0=6784
 electrolytes, u.s. absorption 0=10660, 19293
 electrolytes, u.s. propag., dispersion 0=941
 electrolytes, u.s. velocity 1=12877
 electrolytes, velocity of sound, calc. 0=5013
 electrolytic, aq., surface tension, depend. on ions present 1=18384
 electrolytic, compressibility versus cation size 1=12874
 electron binding, continuum model 2=15582
 electron-transfer processes and chem. reactions 0=19171
 electrosedimentation, dynamical theory 1=144
 ethanol, O₂, u.v. absorption spectra 2=5020
 ether, with iodoform, methylene iodide and bromo-aniline, photocond. 2=17482
 ether solutions of K metal and of naphthacene dianion, flash photolysis 3=18180
 ethyl cellulose in methyl alcohol 3=14161
 ethyl ether, of ethylene glycol, in water, light scatt. 4=24214
 ethylene chloride, ratio of gauche to transform 0=2770
 europium benzoylacetate, in ethanol and methanol, fluorescence spectrum 4=30461
 evaporation, thermodynamics, irreversible 4=21357
 ferrous and ceric sulphate, chemical change rel. to α -irradiation 2=4555
 ferrous sulphate, radical and molecular yields, on β -irradiation 2=4556
 films, thermal critical phenomena 1=16179
 flexible chain molecules, compression 1=2753
 flexible linear macromolecules, gradient dependence of viscosity 1=2730
 fluorescein, absorption and luminescence spectra, effect of pH medium 2=19565
 fluorescein absorption spectra, concentration influence 1=15887
 fluorescein, pH value rel. to luminescence props. 2=2724
 fluorescein, solvent effects on fluorescence 4=29637
 fluorescein, spectra, by quantum chemistry 3=2647
 fluorescein, viscous solns., fluorescence 3=1697
 fluorescence, conc. depolarization, self-quenching effects 2=55
 fluorescence depend. on viscosity and temp. 1=6862
 fluorescence, emission anisotropy, meas. with uncalibrated glass plates 0=19394
 fluorescence and energy transfer, temp. and viscosity effects 1=10515
 fluorescence, meas. of polarization 0=14661
 fluorescence, meas. of polarization 1=8128-30
 fluorescence, mixed solns. 0=6807
 fluorescence quenching in rhodamine B solns. 1=4350
 fluorescence, Sepanov's relation criticized 2=1156
 fluorescence spectra, effect of secondary fluorescence 0=10672
 fluorescence time const., theory, for liquid and rigid solns. 0=3536
 fluorescence, Vavilov's law 2=13346

Solutions—contd

- fluorescence, yield rel. to exciting wavelength, theory 3=1695
 fluorescent, intermolecular energy transfer 2=21915
 fluorescent solutes in organic soln., excitation by high elec. fields 2=59
 free energy of nonequilibrium polarization systems 3=16169
 free energy and radial distrib. function, hyper-netted chain approx. 0=14617
 free radical det. by inverted Overhauser effect 4=25733
 free radical e. s. r. and rotational diffusion 4=30470
 free radical, paramag. relaxation 4=9763
 free radicals, e.s.r., and h.f.s. 3=14183
 free radicals, e.s.r. h.f.s., exchange relax. 2=14321
 free radicals, magnetically diluted, e. s. r. nature 4=2710
 free radicals, Overhauser effect, p, e relax, and mol. motion 4=24245
 freezing of electrolytic solution drops 2=22101
 freezing, separation and concentration of solutes 1=18677
 frozen aq. solns. of S cpds., e.s.r. study 3=15392
 fused AgNO₃-alkali nitrate, heat of mixing 1=12869
 fused salts, heats of mixing, theory 2=1137
 fused salts, theories 2=19552
 γ -irradiated, diffusion kinetics 0=6421
 gas-liquid impinger for SO₂ extraction from air 1=20782
 gas solubility in liquids, rel. to cell potentials 2=15568
 gases, partial molal volume 2=15578
 of globular and rod-like particles, X-ray small-angle scatt. 3=15839
 Group Ib and IIb complex cyanides, Raman spectra, CN stretching bands 0=16707
 growth rate of vapour bubbles in superheated liquid mixtures 1=5376
 H-bonding between solvent and solute 0=3535
 haemoglobin in aq. NaCl, X-ray small-ang. scatt. 0=19115
 halide, flash photolysis, electron transfer processes in, mechanism 0=10357
 hardening, and solute atom dislocation interactions 4=26482
 heat of mixing, associated solutions 4=8217
 heavy water, relaxation of deuterium nuclei 0=2179
 hexamethylene amine-water, stratifying system, light scatt. indicatrics 4=24215
 hexamethylenimine, in water, conc. fluctuations, light-scatt. study 3=21365
 n-hexanol, in octane, dielectric losses 1=12893
 high polymer solutions, ultrasonic spectroscopy 1=10512
 hydration of cations, n.m.r. study 0=3546
 hydrocarbons, aromatic polynuclear, in paraffin hydrocarbons, spectral shifts 0=16707
 hydrocarbons, liquid, γ -irradiated, energy transfer 0=18442
 hydroxide, u.s. velocity 0=5012
 infrared solvent shifts and molecular interactions 2=20788
 inks, flow through capillary tubes 0=4998
 inorganic acids, molar sound velocities 0=19133
 intermolecular interactions, effect on spectra 4=29633
 internal field, effect on electronic spectra of solute molecules 3=21373
 iodide, solvated, u.v. absorption spectrum 4=184
 iodides, aqueous solutions, ion exchange and approach distance 1=18398-9
 iodine, u.v. and visible absorption peaks 0=16705
 ion-ion and water-ion interactions, short-range 4=158
 ion pairs in solutions, theory 1=10511
 ion-solvent interaction 3=16612
 ion-solvent interaction rel. to partial molar volume 4=14149
 ion-solvent interaction, solvation approach, model 4=11183
 ionic, aqueous, H-bonding, near i.r. meas. 4=154
 ionic, electron paramagnetic relaxation 2=7231
 ionic hydration meas. for 16 ions 3=5435
 ionic interaction, with acetone molecules, i. r. absorption, formation of complexes 4=26749
 ionic interactions in aq. solns., Raman spectra 4=2687
 ionic interactions in solns. of electrolytes 1=137
 ionic, Mayer's theory, cluster integral sum 1=136
 ionic melts 2=1132
 ionic motion, Stokes' law including dielec. relaxation 1=15894
 ionic salt mixtures, reciprocal, molten, free energy 4=2655

Solutions—contd

- ionic structure 0=19117
- ions, partial molar volumes, rel. to Born model 3=23873
- irrad. solids, light emission in certain solvents 1=1744
- isopropanol in polymers, H-bonding and i.r. spectra 3=12853
- kinetics of dissolving single crystals, effect of u.s. field 4=7538
- of large molecules, capillary and porous flow, solute velocity increase 3=113
- large polarizable particles, inhomogeneous field study 0=3520
- light absorption of cupric ions 1=12881
- light scattering, rel. to diffusion and u.s. absorption 3=21368
- light scattering, theory 3=23882
- linear macromolecules, local steric hindrances 0=2756
- liquid crystalline, n.m.r. theory 4=18179
- liquid, diffusion coeffs. statistical mechanics 0=10653
- liquid drops, in miscible liquid surfaces, mixing zone circulation 0=19086
- liquid-liquid and solid-liquid, law of mixtures 3=21342
- liquid metals-molten salts, mag. susceptibility 2=19580
- liquid metals, partition of solutes 2=19551
- liquid scintillators, energy transfer mechanism 4=185
- liquid solutions in rotating elec. field 1=5253
- liquified gases, thermodynamic properties 3=14145
- lithium halides, aqueous, u.s. velo., adiabatic compressibility 3=18812
- long-chain molecules, aq. soln., torsional oscillations about C-C bonds 4=29610
- luminescence decay, theory 0=6810
- luminescence, excited-unexcited mols. interact. 3=1701
- luminescence, γ and u.v. induced, comparison 0=2176
- luminescence quenching, theory 0=16708
- luminescence quenching rel. to viscosity 3=16632
- luminescent, crit. intermol. distance for energy transfer 5=25774
- luminescent, with 2 luminescent solutes, conc. depend. 1=1745
- macromolecular, coiling, intrinsic viscosity 4=18185
- macromolecular, dimensions of coil in laminar flow 3=21348
- macromolecular, light scattering meas. 2=15746
- macromolecular, electron and X-ray scatt. studies 1=20719
- macromolecular, under flow, apparatus for dielec. prop. meas. 0=12421
- macromolecular, light scattering 2=7212
- macromolecular, Maxwell effect 1=9488
- macromolecular, orientation birefringence in shear flow and elec. field 3=16617
- macromolecular polymers, hydrodynamics 0=12405
- macromolecular, theory of dielec. props. 2=1162
- macromolecules, depolarization of dispersed light, theory 0=940
- macromolecules, double refraction due to flow, shape effect 0=12498-500
- macromolecules, light scattering, presence of optical harmonics 4=29771
- macromolecules, Rayleigh optical scatt., diffusion broadening 4=14142
- macromolecules, rigid, streaming birefringence, theory 0=16703
- macromolecules, scattering, light, composition fluct. effects 4=18197
- macromolecules, size and shape 0=7823
- macromolecules, specific vol., apparent 3=14154
- macromolecules, strain birefringence, theory 3=5441
- macromolecules, viscosity, as function of vel. gradient 3=14157
- magnetic double refraction 4=29627
- mass transfer, turbulent, near boundary 3=3791
- Mayer's ionic theory appl. to electrolytes 0=6783
- metal-ammonia, cation-electron interaction 1=5275
- metal-ammonia, electron spin relaxation 1=5286
- metal-ammonia, NaCl effect 2=1142
- metalammonia electron spin relaxation and diffusion 3=21414
- metallic binary liquid, volume change on mixing 2=2716
- metallic, liquid binary dilute, binding energy pair model 4=8165
- metallic nitrates, u.s. parameters 4=176

Solutions—contd

- metals in dilute soln., theory 0=16690
- metals, heavy, halide salts, luminescence 3=10990
- Metals, in NH_3 , e.s.r., effect of adding electrolyte 3=11811
- metals in solns. of their salts and in acids, motoelec. effects 2=8923
- metals, in their molten halides, electronic cond. 2=21919
- methanol-cyclohexane, critical opalescence 2=17450
- methanol, NO u.v. absorption spectra 2=5020
- methanol, O_2 u.v. absorption spectra 2=5020
- methanol-water, light scatt., Rayleigh, and hypersound dispersion, density and concn. fluctuations 1=4341
- methanol in water, ultrasonic wave velocity, rel. to cavitation 0=19129
- methyl ether, in dil. soln., microwave absorpt. and mobility 2=7229
- methylethylketone, aq., boiling, bubble growth rate 2=5217
- micelles, statistical mechanics 4=7790
- microstructure, rel. to Rayleigh light scatt. 3=21364
- mixing at const. vol., thermodynamic 1=15859
- mixing processes, const. press. and volume 4=24173
- molar sound velocity 1=15868
- molecular diffusion controlled, moving boundary effects 3=5436
- molecular interactions in n.m.r. reference cpds. 0=15763
- molecular spectra, effect of optical props. 2=22940
- molecules, universal interactions rel. to electronic spectra, theory 1=19644
- molten salt mixtures, excess free energies and heat of mixing, calc. 2=17452
- multicomponent fluids, pseudo pair potential 2=13323
- multicomponent, isothermal diffusion 3=11785
- naphthalene, in durene, radiationless triplet-singlet transitions 3=23115
- nitrate electrolytes, aqueous, u.s. meas. 3=11792
- nitriles as proton acceptors in H-bond formation 2=17087
- n-nitroaniline in benzol, Raman spectrum 1=12291
- nitrobenzene-heptane, stratifying system, light scatt. indicatrices 4=24215
- nitrobenzene-hexane, stratifying system, light scatt. indicatrices 4=24215
- nitrobenzene-trimethylpentane, dielec. dispersion near critical soln. temp. 4=5206
- nitrobenzol, in hexane, dielec. props., structure 3=21386
- nitrobenzol in n-heptane, light scatt. and extinction coeff. 3=21367
- nitromethane, in benzene and water, light scatt. 4=24214
- nonelectrolyte, averaged Boltzmann-factor theories 3=16613
- nonisothermal single-ion heat of transport 4=5154
- normal D_2 -ortho D_2 , volume change on mixing 1=8110
- normal H_2 -normal D_2 , volume change on mixing 1=8110
- normal H_2 -para H_2 , volume change on mixing 1=8110
- n.m.r. chemical shift of hydroxyl and hydronium ions 2=1169
- nuclear mag. resonance of O^{17} in various solutions 3=148
- n.m.r. of O^{17} , solvent effects 3=11810
- nuclear mag. resonance of p and d in H_2O and D_2O solns., mag. interactions compared 0=14666
- nuclear magnetic relaxation in colloidal solutions 1=6580
- nuclear quadrupole relaxation 0=12427
- octane-hexane soln., density, temp. depend., near critical pt. 2=7478
- 1,3,4-oxadiazole in polystyrene, photoluminescence and fluorescence 2=1160
- optical activity and intermolecular interaction 0=3542
- optical extinction, measurement 3=21367
- optical rotation, meas. for high-scatt. 3=16807
- optical rotary power, isotropic 2-component system 4=21316
- organic, α/β scintillation ratios 4=2693
- organic, cathodoluminescence, rise-time characteristics 1=2765
- organic, effect of solvent on electronic spectra 0=15739
- organic, effect of solvent on fluorescent maxima 0=10677
- organic, energy transfer, solute-solute 1=9401
- organic, energy transfer, spectral effects 1=9402
- organic, fluorescence depolarization 1=2760

Solutions—contd

organic, intermolecular free lengths 4=18195
 organic liquids—water, dielec. const., temp. and conc. depend. 0=3528
 organic, luminescence and Cherenkov radiation, γ - and X-ray excited 0=19158
 organic, luminescent, for scintillators, non-radiative transfer 3=10001
 organic melts, u.s. velocity 1=6857
 organic molecules, crystalline, luminescence spectra 1=17917
 organic, N-H stretching freq. 2=7219
 organic, phosphorescence duration, at -196°C 1=3866
 organic phosphors, excitation energy transfer solvent—soln. 0=6808-9
 organic, resonance fluorescence 0=53
 organic, scintillation process. 1=2459
 organic scintillators, theory 2=1157
 organic solute molecules, decay of triplet state 4=11198
 organic solvents, transmission in far i.r. 2=5023
 orientation dichroism in viscous solns. 4=29629
 osmosis, theory and expt. 2=11363
 oxadiazole derivatives, in various solvents, scintillation activating props. 4=11707
 oxidizing, positron lifetime in 1=18436
 paraffins, normal, optical anisotropy, from Rayleigh scatt. 3=136
 paramag. ions, p.m.r., spin—lattice, theory 4=204
 paramagnetic complexes, proton mag. reson. 3=14186
 of paramagnetic ions, proton relaxation 1=18430
 paramagnetic, n.m.r. 3=21413
 paramagnetic salts, aqueous, positron annihilation in 0=9343
 partial thermodynamic functions 1=18394
 partially miscible, interface mixing zone, non-stationary effects 0=19085
 perfluoroheptane—i-octane, cluster formation 0=3519
 phenanthrene in alcohol, luminescence 4=190
 phenols, hindered, solvent effects on i.r. spectra 0=8667
 photo-ionization and electron capture processes in solution 3=16180
 photoluminescence, quenching theory 1=11765
 photoluminescence, quenching 1=12886
 β -picoline, in water, conc. fluctuations, light-scatt. study 3=21365
 β -picoline—water, non-stratifying system, anomalous light scatt. 4=24216
 β -picoline—water, non-stratifying system, scatt. indicatrices. 4=24215
 polar liquid mixtures at critical temp., dielec. props. 4=29639
 polar mixtures in nonpolar solvents 4=5207
 polar molecules in non-polar solvents, relaxation times 0=5009
 polar-nonpolar mixture, dielec. dispersion near critical soln. temp. 4=5206
 polar polymers, thermodynamic props. 3=11790
 polar polymers, thermodynamic props. 3=14158
 polyacenaphthene, viscosity and light scattering 0=14657
 polybutylmethacrylate, in chloroform and isopropanol, diffusion 0=14636
 polybutyl methacrylate-isopropanol, critical opalescence 3=21353
 polyelectrolyte aggregation in 2=7049
 polyelectrolyte, diffusion of ions, theory 3=9447
 polyelectrolyte, multicomponent, light scatt. and sedimentation 2=11366
 polyelectrolyte, relax. phenom. 2=11380
 polyelectrolytes, acoustic propagation, u.s. 4=16108
 polyelectrolytes, chain model, potentiometric titration 2=7206
 polyelectrolytes, interaction of neighbouring charged groups, effect on props. 3=21345
 polyelectrolytes, relaxation phenomena 2=2727
 polyelectrolytes, rod-like, interactions 1=8114
 polyelectrolytes, 2nd virial coeff. 2=17456
 polyelectrolytes, 2nd virial coeff. 4=161
 polyelectrolytes, volume effect theory 3=21346
 polyethylene glycols, in benzene 0=14656
 polyethylene, local steric hindrances and conformations 2=20895
 polyethylene single crystals, morphology changes 4=7525
 poly- γ -benzyl-L-glutamate in m-cresol, viscosity 3=135

Solutions—contd

poly-*i*-butylene-benzene, optical props. and viscosity 3=21352
 polymer chain configurations, concentration dependence 1=6856
 polymer chains, configurational props. 3=15404
 polymer, conc. dependence of frictional coeff. 2=13332
 polymer, conc., entanglement effects 3=18809
 polymer-diluent, viscosity and glass transition 4=27161
 polymer, Doppler shifts in light scattering 4=16111
 polymer, hydrodynamic interaction, effect on viscoelasticity 3=18810
 polymer, interpretation of viscosity data 1=4334
 polymer, light scattering 4=14143
 polymer, light scattering photometer 4=14330
 polymer, linear molecule, extension determination by light scattering 1=17382
 polymer, local steric hindrances and conformations 2=20894
 polymer, mol. wt. distrib. det. 2=2036
 polymer molecules, frictional coeff. 4=27157
 polymer molecules, linear, partition functions 4=21103
 polymer, Monte Carlo calc. of dynamics 2=1144
 polymer, Newtonian flow deviation, check 2=9273
 polymer, in poor solvents, intrinsic viscosities 3=21350
 polymer, second osmotic virial coeffs. rel. to mol. weight 3=3802
 polymer, second virial coeff. 4=27159
 polymer, 2nd virial coeff. of branched star molecules 3=1686
 polymer solns., u.s. irradiation, cavitation 2=19558
 polymer, Standing's rule, statist. mech. deriv. 2=11368
 polymer, statistics of configuration and free volume 3=10562
 polymer, streaming birefringence, anisotropy 3=16618
 polymer, swelling of highly filled, and effective crosslinking 1=18400
 polymer, theory 1=12875
 polymer, thermodynamics of aggregation 1=9388
 polymer, u.s. absorption, network diffusion model 4=11196
 polymer, u.s. absorption rel. to frequency 4=5172
 polymer, viscoelasticity, effect of hydrodynamic interaction 4=8174
 polymer, viscosity, Huggins const. calc. 4=2661
 polymer, viscosity of concentrated solutions 4=8179
 polymers, conc. in H_2O , phase separation 4=24179
 polymers, conference report 1=11587
 polymers, diffusion and sedimentation, for 1, 2 and 3 branch points and rings 0=8657
 polymers, dilute, theory, second virial coeff. calc. 0=16694
 polymers, dilute, thermal diffusion 0=19102-3
 polymers, flow birefringence 1=15878
 polymers, intramolecular light scattering 1=8120
 polymers, intrinsic viscosity measurement, velocity grad. effects 0=8599
 polymers, lattice model theory 2=17457
 polymers, light scattering, theory 4=14141
 polymers, long- and short-range interactions, review 1=3578
 polymers, molecular dimensions 2=6242
 polymers, molecular wt. distrib., det. by fractionation, theory 0=20702
 polymers, neighbour interactions and internal rotations, solvent effect 0=15790
 polymers, optical activity, theory 1=9487
 polymers, sedimentation equilib. second virial coeff. det. 0=77
 polymers, sedimentation of microscopic spheres 0=76
 polymers, as semi-permeable membrane for concentration cells 4=26755
 polymers, sheer degradation 0=3522
 polymers, specific vol., apparent 3=14154
 polymers, theory of dilute solutions 0=14620
 polymers, thermodynamics, calc. 4=14138
 polymers, thermodynamic props., osmosis, light scatt. meas. 4=2669
 polymers, u.s. absorpt. spectra, configuration jumping effect 4=2671
 polymers, u.s. cavitation, degradation mechanism 2=9278
 polymers, u.s. vels. 3=14161
 polymers, viscoelastic behaviour, review 1=15783
 polymers, viscoelasticity at high press., u.s. meas. 3=14156

Solutions—contd

- polymers, viscosities near crit. temp. 3=21349
 polymers, viscosity rel. to temperature 3=18811
 polymethyl methacrylate-butyl chloride, critical opalescence 3=21353
 polymethylmethacrylate and copolymer, v viscosity 2=13341
 polymethylmethacrylate in diphenyl, viscosity rel. to shear stress 3=16619
 polymethylmethacrylate, viscosity and light scatt. 3=134
 polypeptides, helical, Cotton effect, origin 3=2681
 polysiloxanes, u.s. vel. and compressibility 1=15872
 polystyrene, birefringence induced by acoustic waves 2=13339
 polystyrene- CCl_4 , segmental motion 0=19166
 polystyrene and copolymer, viscosity 2=13341
 polystyrene, critical opalescence 0=6805
 polystyrene in cyclohexane, crit. opalescence rel. to molec. force range and radius of gyration 2=11373
 polystyrene in cyclohexane, critical opalescence 1=1743
 polystyrene in cyclohexane, critical opalescence 2=5016
 polystyrene-cyclohexane, critical opalescence 3=21353
 polystyrene-cyclohexane, optical props. and viscosity 3=21352
 polystyrene, dilute soln. props. in θ -solvents 3=16616
 polystyrene, dilute solns. in toluene, viscoelastic props. 4=24190
 polystyrene, dynamic mechanical props. 4=27158
 polystyrene, refractive index, temperature increment 0=14658
 polystyrene, second virial coefft. calc. 3=16615
 polystyrene soln., radioluminesc. efficiency rel. to mol. wt. 4=27184
 polyvinyl acetate in benzene, u.s. vels. 3=14161
 polyvinylcarbazole, in benzene, vapour pressure, conc. and temp. depend. 4=29806
 polyvinylpyrrolidone, interaction with water in solutions 1=18410
 polyvinyl sulphonate alkali halides, excluded vol. study 2=11367
 porphyrins, luminescence 3=9467
 pressure shifts of optical absorption spectra 1=8125
 pressure soln. in rocks 0=10280
 Prigogine's theory, appl. to viscosity and diffusion 1=138
 proton relaxation in paramagnetic solns. 1=5285
 proton relaxation for study of ion binding 4=25790
 proton solvation, quantum mech. calc. 1=18397
 pyrazine in hydrocarbon and EPA glasses, solvent effects on $n \rightarrow \pi^*$ transitions 0=15742
 pyrene in ethanol, luminescence, delayed and normal, spectra 3=14174
 quasi-lattice model of molten reciprocal salt systems 1=4325
 quinine sulphate, fluorescence and degree of association, correl. 1=145
 radioactive, paramag. relaxation 0=6814
 radiolysis of aqueous azide soln. containing mercuric salts 3=16181
 Raman spectra, solute band intensity, solvent effects 0=15717
 rare-earth ions in aq. solns., O^{17} n.m.r. shifts 2=5029
 rare-earth salts in D_2O , H_2O , fluorescence yields 4=2695
 rare gases in molten salts 1=4335
 Rayleigh light scattering, and soln. stability 3=21368
 Rayleigh light scattering, in region of critical opalescence, meas. 3=21367
 refractive index gradient meas., Schlieren method 4=8380
 refractive index rel. to conc. 4=16110
 refractive index meas., incremental 3=14323
 relaxation of gas and vapour cavities under u.s. irradiation 2=15587
 relaxation phenomena under u.s. radiation 2=5013
 rhodamine B, decoloration by pH changes 3=23536
 of rigid rodlike molecules, viscosity 3=135
 saline, droplets, charge accumulation and loss 4=5539
 salts in liquid metals, elec. cond. decrease 1=9406
 sapphire dissolution in ceramic systems, kinetics 4=18188
 scintillator solutions, luminescence minimum 1=4349
 secondary and primary fluorescence of solutions 1=8126-7

Solutions—contd

- solid, binary low-conc., light absorpt. and luminescence theory 2=710
 solidification, progressive, grain boundaries 2=22100
 solute dispersion in fluid in laminar flow 2=19547
 solute distrib. under external forces, theory 3=3799
 solute molecule rotation relaxation by polarized photoselection 4=14167
 solute redistribution during phase transformations 4=27370
 solution-solvent mixing 0=10639
 solvation, entropies and electrostatic volumes 3=9452
 solvent effect on optical rotation and dipole moment 2=1147
 solvent effects in i.r. absorpt. spectra 4=29630
 solvent effects on intermolecular forces, absorption band free, shifts and intensities 0=10669-70
 solvent effects in n.m.r. spectra 0=7801
 solvent molecules interaction, with anions and cations, volumetric effects of hydration 4=21102
 solvent relaxation during solute excited lifetime, fluorescence spectral effects 3=9468
 solvent shifts in proton magnetic resonance 1=15909
 solvent-solute interactions, effect on vibrational spectra 2=15598
 sonoluminescence, asymmetrically broadened emission lines 0=16709
 Soret effect, photoelec. recording 0=8664
 specific and universal interactions, distinction, rel. to relative influence on solution spectrum 4=27180
 spectra, i. r., solvent effects, allowance for in analysis 4=7799
 spectral analysis, spraying into glow discharge, rotating electrodes 0=10786
 spectral shifts for aromatic hydrocarbons in paraffin solvents 0=16707
 spin-lattice relaxation times, concentration dependence 1=4359
 strictly regular mixtures, approximations 2=21841
 sugar, light scattering, turbidity meas. 0=6951
 surface phenomena in ternary metal solns., Semenchenko theory 4=8184
 surface tension of binary solns., theory and expt. 2=1125
 surface tension isotherms 4=8183
 surface tension measurement 1=6847
 Taylor instability, effect of diffusion 3=11789
 ternary systems, diffusion coeff. meas. 2=1139
 terphenyl in cyclohexane-benzene, luminescence quenching 1=6867
 tetra-n-hexylammonium iodide in carbon tetrachloride, u.v. absorption spectrum 4=184
 tetrafluoroboric acid, and salts, X-ray analysis 4=21100
 theory based on internal pressure 1=15861
 theory of nonideal solns., appl. to u.s. absorption 1=8119
 thermal conductivity, composition dependence 1=4328
 thermodynamic excess functions for electrolytes 0=10656
 thermodynamics, irreversible, inversion of linear laws 0=14904
 thermoelectric powers, initial, acids, strong 3=14181
 tobacco mosaic virus, electric birefringence theory 1=8121
 tolan, in ethyl alcohol, luminescence 1=14056
 toluene, with various aromatic activators, scintillation efficiency 1=4348
 transition metal ions and complexes in D_2O , spectral shifts 0=3531
 transport theory in dense fluid mixtures 1=4329
 triethylamine, in water, conc. fluctuations, light-scatt. study 3=21365
 tryptaflavine, solvent effects on fluorescence 4=29637
 u.s. absorption, pulse apparatus and data 3=230
 undercooled, e.s.r., line-shape, calc. 2=764
 uranin, fluorescence depolarization by mol. rotation 3=139
 uranyl nitrate, fluorescence depend. on temp. and thermal treatment 0=3539
 uranyl nitrate, rapidly frozen, fluorescence spectra 1=14637
 varnishes, flow through capillary tubes 0=4998
 velocity, acoustic waves, temp. and conc. var., aqueous 4=14158

Solutions—contd

- vinyl silanes, substituted, p-p coupling, solvent var. 4=20109
viscosity of binary solns., statistical mech. 0=19092
viscosity of critical mixtures 2=2681
viscosity of polyelectrolyte dilute solutions 1=108
viscous, photodichroism, reversible, stationary value, calc. 3=16625
water-ethylene glycol mono-isobutyl ether system, critical point 1=2754
water, O_2 u.v. absorption spectra 2=5020
water, supercooling enhancement, filtering effects 4=5456
Wurster's blue perchlorate 0=14663
xanthinol in glycerol, fluorescence spectra rel. to scattering 2=17469
AgBr precipitates, adsorption of H^+ and OH^- ions 3=5165
AgNO₃ and TiNO₃ in alkali nitrates, molten, Van der Waals energy changes in mixing 2=11355
Al ion coordination numbers, from O^{17} n.m.r. 4=207
AlCl₃ in SOCl₂, Raman spectra, 0.11-0.73 mole per mole 3=14170
Al-Cd system, partition of solutes 2=19551
Al-Cu alloys, liquid, 1000°C, Cu activity 3=14152
Ar-CH₄, heat of mixing and volume change 3=1682
AsCl₃ in liquid Cl₂, Raman spectrum, solvent effect 1=18414
Au, optical absorption rel. to part. size, temp., prep. method 4=23681
Be ion coordination numbers, from O^{17} n.m.r. 4=207
BeCl₂, aq., structure from Raman spectra 3=9463
BeF₂, aq., structure from Raman spectra 3=9463
BeSO₄, compressional relaxation 0=5010
Bi in molten BiCl₃, absorption spectra 2=19563
Bi-BiBr₃, molten, mag. susceptibilities 4=24239
Bi-BiI₃, elec. cond. of molten solns. 3=11805
Bi-BiI₃, electronic conduction in melts 3=11806
Bi-BiI₃, molten, mag. susceptibilities 3=11807
C¹⁴, aqueous, liquid scintillation counting 0=5687
CCl₄-methylene chloride, equilibrium and transport props. 0=10655
CD₄ and CH₄ in one another, i.r. spectra 2=14683
C₇F₁₆-i-C₈H₁₈, critical region, X-ray scatt. obs. 2=9269
CH₄, with A and N₂, condensed state, density 1=12873
(CH₃CH₂)₂ TLX aqueous Ti²⁰³-H¹ nuclear spin-spin coupling 4=12521
CH₃NH₃⁺ + OH₂ + NH₂CH₃ in aq. acid, proton transfer study by n.m.r. 0=14118
(CH₃)₂ TLX aqueous Ti²⁰³-H¹ nuclear spin-spin coupling 4=12521
CO₂, aq., optical rotation, effect of circularly polarized light 3=1688
CO-CH₄, heat of mixing and volume change 3=1682
Ca(NO₃)₂, in water, thermodynamic props., at high temp. 4=21126
Cd amalgams, isoviscous solns. 1=11757
Cd amalgams, isoviscous 1=12872
CdCl₂-KCl melts, (CdCl₄)²⁻ ion formation 2=21891
Cl³⁵, n.m.r. contact shifts in CoCl₂ solns. 0=19168
CoCl₂, aq., pink and blue, mag. behaviour of Co²⁺ 2=21903
CoCl₂, in water, thermodynamic props., at high temp. 4=21126
CoSO₄, aqueous, absorp. of acoustic waves, u.s., and dissociation 3=14160
CoSO₄, conc., absorption, u.s., 0.2-2.0 Mc/s 4=5173
Co⁺⁺ paramagnetic ions, light absorption 1=15883
Cr³⁺ paramagnetic solns., light absorption 2=5018
Cr³⁺ salts, e.s.r. 2=5028
Cr³⁺ salts, e.s.r. 3=3818
Cs, in NH₃, e.s.r., effect of adding CsI 3=11811
Cu acetate in H₂O, X-ray study 1=11748
Cu alloys, molten, mag. susceptibility 1=152
Cu salts, nuclear resonance fluorescence of Cu⁶³, slowing down of recoils 1=611
CuSO₄, H₂O cluster about Cu²⁺ 1=11756
DT, in e-D₂, vapour-liquid equilibria, from triple pt. to crit. temp. 3=21626
Eu chelate laser action 4=19281
Fe-group salts, paramag. resonance and relaxation 0=8085
Fe²⁺, Fe³⁺, in water, electron transfer, theory 3=14178
FeCl₃ in HCl, tetrahedral Fe coordination by Cl 1=9377
Gd³⁺ perchlorate, hydration geometry, from n.m.r. 3=18832

Solutions—contd

- H in benzene, thermodynamic props. 2=13327
H-bonding solutes in aq. soln., conductance 4=29612
H, i.r. absorption spectra 2=9280
H isotopic equation of state, including quantum effects 3=21321
HCl, aq. soln., compressibility, from u.s. velocity 1=1736
HCl, p.m.r., var. conc. mechanisms 4=206
HCl-solvent, H-bonded systems, double minimum pot. 2=2723
HCl, in water, D substitution, effect on glass transform. temp. 3=23492
H-D systems, solid-liquid phase diagrams 3=21612
H₂-D₂, density, m.p. to 20.4°K 3=21343
HF, in H₂O, neutron scatt. in, energy distrib. 4=16092
HNO₃, aq. soln., compressibility, from u.s. velocity 1=1736
HNO₃, p.m.r., var. conc. mechanisms 4=206
in H₂O, dielectric const. decimetre meas. 4=24227
H₂O, gamma-ray effects, H₂⁺, H₂O⁺ struct. and stability 4=10651
H₂O + D₂O, thermodynamics of mixing 4=29204
80% H₃PO₄-65% HCl for CdSe crystal etching 2=4372
H₂SO₄, dilute, compressibility meas. 2=9272
H₂SO₄, refractivity and density 1=5278
H₂SeO₄, aq., mol. species, Raman spectra 4=182
HT, in e-H₂, vapour-liquid equilibria, from triple pt. to crit. temp. 3=21626
He isotopic equation of state, including quantum effects 3=21321
He II-He³, diffusion data analysis 3=1881
He³-He II, diffusion coeff. and thermal cond. 0.7-2.1°K 0=19539
He³-He II, first-sound absorption 2=136
He³-He II, first-sound absorption 3=3943
He³-He⁴, change of excess chemical potentials, conc. depend. 0=14919
He³-He⁴ mixtures, properties between 0.4°-2°K 1=8272
He³-He⁴, thermal cond. and diffusion, λ-pt. to 0.06°K 2=134
He³-He⁴, thermal cond. and diffusion, λ-pt to 0.6°K 3=3939
He³ and He⁴, thermodynamic properties 4=11444
He⁴-He³, Boltzmann gas model 0=8863
Hf oxyhalides, aq., complex ion structure 0=14627
Hg in A, discrete sites of Hg 1=15842
Hg, dilute, surface tension, temp. depend. 3=21340
in Hg, Gp.IIB metals 1=2750
HgI₂, aqueous, rotational correl. time of HgI₂²⁻ 4=2142
In sulphate, nitrate and perchlorate, aq., Raman spectra 3=7211
In sulphate, Raman spectra, incomplete dissociation 0=10671
K in ammonia, density 1=4332
K hyaluronate, electromech. effect during flow in solutions 2=858
K in liq. NH₃, decomposition, study 2=10971
K, in NH₃, e.s.r., effect of adding KI 3=11811
K₂(SO₄)₂, aq. solns., electron spin exchange 3=16639
KCl, aq., freezing 3=3927
KCl in ECN-H₂O, conductivity 2=19553
KCl, in water, thermodynamic props., at high temp. 4=21126
K₂CO₃, in water, thermodynamic props., at high temp. 4=21126
KCrO₄, magnetic susceptibility 3=146
K₂CrO₄, in water, thermodynamic props., at high temp. 4=21126
KHF₂-H₂O, F¹⁹, n.m.r. chemical shift 1=6874
KHF₂-H₂O, F¹⁹, n.m.r. chemical shift 1=10523
KHF₂-KF-H₂O, F¹⁹, n.m.r. chemical shift 1=6874
KHF₂-KF-H₂O, F¹⁹, n.m.r. chemical shift 1=10523
KI-dodecylpyridinium iodide solution, scattering of light 1=4477
KI, in glycol, glycerine and ethanol, u.s. vel. and compressibility 1=11759
KI in liquid K, elec. cond. decrease 1=9406
KI, nuclear quadrupole relax. of I¹²⁷ 0=12427
KMnO₄, magnetic susceptibility 3=146
K-NH₃, paramag. relax. times 4=8222
K-NH₃ and K-ND₃, paramagnetic relaxation 1=6873
KNO₃, supersaturated, parent crystal critical dimension 2=4373

Solutions — contd

- KNO₃, in water, thermodynamic props., at high temp. 4=21126
 La chloride, freezing point 0=19506
 LiF, in fatty acid solns., "anomaly" 2=12886
 LiNO₃, aqueous, compressibility, adiabatic, lowering 3=18807
 Mg²⁺ in methanol, solvation number, by n.m.r. 3=1685
 MgSO₄, aqueous, sound absorpt., relax. theory 3=23879
 MgSO₄, p.m.r., dissociation mechanism 4=209
 MgSO₄ in water and methanol, u.s. absorption 2=13337
 Mn ion hydration, proton relax. data 2=15620
 Mn salts, paramag. absorption and relaxation 0=8670
 Mn²⁺ ions in methanol, proton relaxation 1=157
 MnCl₂ aqueous, Overhauser effect, rel. to temp. 4=11219
 MnCl₂, frozen, Mn²⁺ e. s. r. rel. to composition 4=30735
 MnSO₄, u.s. relaxation, dielectric const. influence 1=18404
 N oxides—H₂O system, absorption spectrum at 357mμ 4=14168
 N₃⁻, absorption spectrum 3=21377
 NH₃, liq., molar vols. of salts and metals 2=2714
 NH₄⁺ in aq. acid, proton transfer study by n.m.r. 0=14117
 NH₄Cl drop, crystallization centre formation 2=4387
 (NH₄)₂Cr₂O₇, magnetic susceptibility 3=146
 NO, in various solvents, near u.v. absorption, HONO formation 2=19561
 NO₃⁻, absorption spectra 2=5024
 N₂—O₂, volume contraction on mixing 1=9384
 N₂O₄, aqueous, u.s. absorption study 1=11760
 Na carboxymethyl cellulose, relaxation phenomena 2=2727
 Na hypophosphite, n.m.r., flow study 1=12904
 Na—metal, electrical resistivity 1=5283
 Na, in NH₃, e.s.r., effect of adding NaI 3=11811
 NaCl, in glycerol, dissolution kinetics 2=15581
 NaCl, surface tension effect of electrostatic field 2=11347
 Na₂Cr₂O₇, magnetic susceptibility 3=146
 NaI, in C₂H₅OH, elec. cond. near critical temp. 2=17481
 NaI, nuclear quadrupole relax. of I²⁷ 0=12427
 Na—NH₃, proton resonance 3=7222
 NaNO₂ in H₂O, Raman spectrum 1=12291
 NaNO₃—KNO₃, fused salts, volume change on mixing 1=15860
 NaOH, aqueous, flowing along solid surf., CO₂ absorption 2=9267
 Na₂SO₄—H₂SO₄—H₂O, isothermal diffusion 3=1680
 Nd chloride, in alcohol—water, absorption spectra, temp. depend. 3=21374
 NdCl₃ in alcohol—water solutions, absorption spectra 3=18816
 Ne—nD₂ liquid system, phase separation 3=3801
 Ne—D₂ mixture, phase separation, temp. dependence 4=24178
 O₂—A, at 77°K, excess thermodynamic properties 1=8109
 O₂—A, volume change on mixing 1=8110
 O₂—N₂, at 77°K, excess thermodynamic properties 1=8109
 O₂—N₂, volume change on mixing 1=8110
 (ON(SO₃)₂)⁻ in water and glycerol, thermal motion in electron resonance 1=9407
 O₃—O₂, dielec. const. 0=14655
 Pb, dilute, surface tension, temp. depend. 3=21340
 Pb salt solns., with excess Br⁻ and Cl⁻, luminescence and absorption, temp. depend. 2=7220
 Pb—Cu, dilute, density, 650–800°C 2=7204
 Po chloride, aq., α-emission, surface effects 2=17453
 S²⁻ and HS⁻ ions, u.v. absorpt. spectra 4=16117
 SO₃, in water, D substitution, effect on glass transform. temp. 3=23492
 (SO₃)₂NO²⁻ in aq. soln., Overhauser—Abragam effect 0=6815
 (SO₃)₂NO²⁻, in dilute aqueous solution, double resonance exper. 0=17777
 Sn, dilute, surface tension, temp. depend. 3=21340
 Sn²⁺ halides, absorption and luminescence spectra 2=17468
 Sn—Bi, dynamic viscosity, temp. depend. 1=12871
 T₁ aqueous, liquid scintillation counting 0=5687
 Ta¹⁸¹ ions in conc. H₂SO₄, attenuation of ang. correl. of γ-γ cascade 2=20557
 ThCl₄, aq., solubility product 2=19554
 Ti³⁺ salts in alcohol and glycerine, e.s.r. 1=18433

Solutions—contd

- Ti³⁺ salts, paramagnetic resonance hyperfine structure 1=18434
 Ti³⁺ salts, paramagnetic resonance hyperfine structure 2=21925
 Tl salt solns., with excess Br⁻ and Cl⁻, luminescence and absorption, temp. depend. 2=7220
 Tl salts (thallous), Tl n.m.r., chemical shifts 1=154
 Tl salts (thallous), Tl n.m.r., effects of ferricyanide and citrate ions, ion-pair formation 1=156
 Tl⁺,³⁺ halides, absorption and luminescence spectra 2=17468
 TlBr₃, Tl n.m.r., chemical shifts due to added halides 1=155
 TlCl₃, Tl n.m.r., chemical shifts due to added halides 1=155
 Ti₂SO₄—H₂O system, sedimentation meas. U_{233,235} crit. aqueous, η determ. 2=10155
 VO²⁺, paramagnetic relaxation 0=19167
 VOCl₂, aqueous, e.s.r. line shape rel. to com and temp. 3=150
 VOCl₂, aqueous, e.s.r. line shape rel. to conc. and temp. 2=61
 WCl₆, liquid and supercooled, paramag. reson. 3=21407
 Zn amalgams, isoviscous 1=12872
 Zn amalgams, isoviscous solns. 1=11757
 Zn halides, aq., u.s. velocity rel. to conc. 1=1740
 ZnCl₂, aq., freezing 3=3927
 ZnCl₂, aq., Raman spectra 4=5184
 Zn—Hg, X-ray study, short-range order 1=12860
 Zn—In—Ga liquid system, thermodynamic props. 2=15580
 Zr oxyhalides, aq., complex ion structure 0=14627

 Ba films 2=12947
 by Ba getter in vacuum tubes, problems 2=67
 Ba, on W, electrostatic interaction 1=12668
 BaO, adsorption on W 1=12667
 BaO, adsorption, on W 1=15183
 BaO, on W, electrostatic interaction 1=12668
 Bi, on Zn, activity, internal friction study 2=21569
 CO, flash desorption 1=4101
 CO on Cu, Au films, surface potential diode meas. 3=13602
 CO, on Ni, chemisorption mechanism 2=10980
 CO, on W 2=8895
 CO₂ by Ba films 2=844
 CO₂, on Ni, chemisorption mechanism 2=10980
 Cd, on W 1=20693
 CdS, chemisorp. of O, elec. cond. contact potential obs. 4=29194
 CdS, chemisorption, photoinduced calc., photo conductive gain and response time var. meas. 4=30900
 CdSe—O₂, charge transfer controlled interact. 3=11326
 Cl, gaseous adsorption, by Cu and CuO 0=10369
 on Co, of H₂ and CO, work function, chemisorption bond 0=18452
 Cs, adsorption on W 1=12667
 Cs, on W, electrostatic interaction 1=12668
 Cu alloys, internal, after annealing, rel. to elec. resistance 0=14064
 Cu, chemisorption, rel. to oxidation 3=18435
 on Cu, of H₂ and CO, work function, chemisorption bond 0=18452
 D, on cathodes, in elec. discharge, meas. 2=1413
 on Fe, of H₂ and CO, work function, chemisorption bond 0=18452
 Ga, on Zn, Cd and Sn, crack growth 3=20757
 Ge, effect of absorption of water molecules 0=7927
 Ge, effect on surface photovoltage, wavelength depend. 1=3789
 Ge, residual gas ad- and desorption in vacuum 2=12951
 H chemisorption rel. to previously adsorbed species 2=15103
 H on Co, chemisorption 3=5163
 H on Cu, Au films, surface potential diode meas. 3=13602
 H, electrolytic, on Ni 0=8311
 H, on Pd, grain-size depend. 1=1461
 H, on W and Ni, chemisorption, in sintering studies 2=10946
 H₂, adsorbed, n.m.r., molecular migration 2=18485
 H₂ by Ba films 2=845
 H₂, by Ba getters 2=5086
 H₂, chemisorption on Ni 1=1480
 H₂ and CO chemisorption on ZnO 2=8916
 H₂, on Fe films 1=1482
 H₂, on Ni, effect on ferromag. reson. 1=12551
 H₂, on Ni films, temp. depend. 0=6426
 H₂, by Pd black, temp. depend. 0=4749
 H₂, in Th₂Al₃, equil. pressure isotherms 3=20941
 H₂, by Ti and Zr, at low pressures 0=6427
 He³, adsorbed, n.m.r. atomic migration 2=18485
 He⁴, liquid, on Vycor porous glass 2=9472
 Hg, on Zn, activity, internal friction study 2=21569
 Hg, on Zn, Cd and Sn, crack growth 3=20757

Sorption — contd

- K onto Pt, ad- and de-sorption inhomogeneities 1=20689
 Kr, on Fe films 1=1482
 by Mg, during evaporation 4=14466
 Mg ions, desorption by elec. fields 1=5105
 MgO cathode, residual gas analysis 4=21562
 MgO, chemi-, of O₂, on n, γ irradi., e.s.r. obs. 4=23600
 MgO, neutron irradiated, sorption of O₂, H₂, N₂O 3=13604
 Mo, chemisorp. of N₂, electron microscope study, calc. 4=29195
 Mo, of N₂, $\sim 10^{-10}$ torr 4=26718
 N, flash desorption 1=4100
 N, liquid, on Vycor porous glass 2=9472
 N, speed during electron impact activation 4=18295
 N, on W, kinetics, electron reflection study 1=7099
 N₂ by Ba films 2=846
 N₂, chemisorption on W ribbon 1=1479
 N₂, on Ni film, rel. to saturation mag. 2=14785
 Nb, of N₂, $\sim 10^{-10}$ torr, temp. var. 4=26718
 Ni, chemisorption of H, mag. saturation moment decrease 4=22949
 by Ni films, of O₂ and BaO, effect on elec. resist. 3=20271
 on Ni, of H₂ and CO, work function, chemisorption bond 0=18452
 Ni, loss of sorbed gases, at 800-900°C 0=12120
 Ni oxide, chemisorption of O₂ 3=13573
 NiO, chemisorption of O₂ and H₂ after neutron irradi. 3=3366
 NiO, of H₂ 3=13603
 NiO, neutron irradiated, sorption of O₂, H₂, N₂O 3=13604
 NiO, of O₂, 20-400°C 3=13603
 O, chemisorbed, electron interaction 4=23658
 O photodesorption, from ZnO, temp. depend., photocond. study 0=18074
 O on W, chemisorption, 20° and 300°K 3=3396
 O₂, chemisorbed on Ni, Cu, Fe, Cr, Mo, effect on work function 4=25657
 O₂, chemisorption on Cu, effect on elec. props. 2=14591
 O₂, dried, on Si, surface cond. effect 2=6459
 O₂, on Fe films 1=1482
 O₂, on Ge 0=10368
 O₂, on Ge, effect on surface levels 2=8343
 O₂, on Ge films, at low temp. 1=1481
 O₂, on Ge, surface electron energy distrib. 1=1045
 O, on W, kinetics, electron reflection study 1=7099
 O, on ZnO, changes in elec. props. 1=20741
 Pb, on Zn, activity, internal friction study 2=21569
 PbO, effect on elec. cond. 2=4065, 8439
 PrO_x, of O irregular press. var. 4=23601
 Pt, desorption of Na, K, Ca impurities 0=6061
 Rb ions, desorption by elec. fields 1=5105
 Re, K⁺ desorption kinetics 4=2129
 Re, Na⁺ desorption kinetics 4=2129
 Re, Rb⁺ desorption kinetics 4=2129
 S vapour on Ni to give NiS, diffusion process 3=1387
 Si rectifiers, in moist gases, inversion behaviour 0=9982
 Si rectifiers, in various ambients, surface breakdown 0=11702
 Si, residual gas ad- and desorption in vacuum 2=12951
 Sn, on Zn, activity, internal friction study 2=21569
 Ta films, chemisorption of tritiated water 4=7730
 Th, desorption on W, field-emission microscope study 2=10947
 Th, on Re, thermal desorption 3=21856
 Th and Zr alloy bulk getters, residual N₂, CO and H₂ pressures 4=21197
 Ti droplet getter-ion pump, pumping characteristics 0=16742
 by Ti films, of activated gases 0=10374
 TiCl₄, on Ti, Pt and Ni 2=19120
 TiO₂, photo, of H₂, methane, after adsorption of O₂ 4=23612
 TiO₂, of O₂, temp. var. 4=23612
 W, field desorption of CO 4=7725
 W, self-desorption of residual gases, autoionic projector 2=8887
 Xe in high density graphite, high temp. 2=6855
 by Zn, during evaporation 4=14466
 ZnO, of gases, effect on electroluminescence 0=16116
 Zr-Al alloys rel. to gaseous etching 4=21200

 spark-gap, high-voltage triggered 4=5582
 spark-gap with protruding needle, characteristics 2=9543
 spark-gap switch, low inductance, low press. 2=17760
 spark gap trigger system 4=29891
 spark gaps in air, controlled, performance study 1=282
 spark gaps in inhomogeneous fields 1=16296
 spark gaps, low-pressure, triggering mechanism 3=4051
 spark hardening of metals 1=1625

Sparks, electric—contd

spark ion source, graphite, polyatomic molecules, formation and concentration 4=25667
 sparking threshold, rel. to Townsend-like breakdown 4=18750
 spectra, method for wavelength shift of spectra 1=3511
 spectra recording method with resolution of time and along channel cross-section 1=4456
 spectra, var. with self absorption and conc. 4=2171
 spectra, Zn VIII triplet with brass electrode 2=15900
 spectral line broadening and ion concn., time variation 3=2553
 spectral lines, self-absorption and intensities 3=10440
 spectrochem. analysis source unit. 3=25842
 for spectrochemical analysis, Cu, effects of discharge chars. 4=7794
 in spectrochemical analysis, effect of electrode material 2=23982
 spectrochemical analysis, metals, surface phenomena. 3=25844
 spectroscopic source, high precision 0=5169
 steel ball array as 3cm radiator 1=5586
 study by photomultipliers and fast oscilloscopic techniques 1=10678-9
 suppression by pulsed corona 4=27502
 switches, fast triggered, for 2MJ capacitor bank 3=7471
 temperature decay of high-current channels 3=21739
 temperature distrib., in channel 2=22185
 temperature fall from 50000° to 5000° K 4=8659
 trigatron, pressurized, 10-50 kV low jitter operating range 4=18757
 trigatron spark gap, discharge development 3=24248
 triggered gap mechanism 4=27505
 triggering spark gap by exploding wire 4=18763
 as u. v. light source, h. f. 3-electrode system 4=29758
 ultra-short light flashes, after-illumination effect investigation 4=14609
 ultraviolet emission, study with high-speed camera 2=15762
 vacancy quenching in noble metals 2=8204, 10378
 vacuum cup electrodes, effect of graphite adsorpt. 3=13631
 vacuum gap, electron triggering, for rapid switching 2=340, 17796
 "vacuum sliding", prod., as u.v. source 4=481
 vacuum spark gap, properties 0=7107
 vacuum spark, radiation patterns 1=10683
 vacuum, time-resolved line emission 1=17262
 in water, channel broadening and shock waves 1=5430
 in water, glass cracking 1=12603
 X-radiation, electron temp. 0=9010
 for X-ray spectroscopy 4=24781
 A, spark discharges, I, V and spectral line intensity, time depend. 1=283
 A, spectral line broadening and shift 0=17702
 A, streamer mechanism in filamentary breakdown 1=10679
 A, in T-shaped tube, 30 kc/s oscillations 2=1405
 A II and He I, spectral broadening and shift 0=13417
 A, Xe and N₂, high-temperature prod. 0=7105
 Al, dislocation formation 3=12969
 Ar, high current spark gaps, dielectric recovery, temp. decay calc. 4=27503
 Ar, at high press., long spark stabilized by rotating gas 4=14612
 Bi, dislocation formation 3=12969
 Cd I, II spectra, press. effect of foreign Zn 4=25497
 D, channel expansion 1=18790
 Fe-Si alloy, dislocation formation 1=17529
 H, channel expansion 1=18790
 H, high current spark gaps, dielectric recovery, temp. decay calc. 4=27503
 in H, reignition of freely recovering spark channels 3=14544
 H₂, formative time lag meas. 4=8657
 H₂, shock-wave generation 4=266
 H₂, sparking voltage near Paschen minimum 4=479
 He, charged-particle density 1=16281
 He, electron concentration meas. from plasma continuum intensity 2=19986
 He, spark discharges, I, V and spectral line intensity, time depend. 1=283
 He, temp. and electron density distrib., in channel 2=22185
 He, 2.5-12 atm. 0=14998
 Li III excitation in vacuum sliding spark 4=18765
 N, channel expansion 1=18790

Sparks, electric—contd

- N, spark discharges, I, V and spectral line intensity, time depend. 1=283
 N₂, formative time lag meas. 4=8657
 N₂, temp. and electron density distrib., in channel 2=22185
 N₂O and H₂ mixtures, behaviour 0=3746
 O, channel expansion 1=18790
 W, far u.v. continuous emission, spatial distrib., apparatus 3=24249
 Xe, h.f. discharge repetition, spark channel explosions 3=1950
 Zn, dislocation formation 3=12969

 measurement, of gases, lecture demonstration 1=2911
 measurement, at high temp. prod. by solar furnaces 0=14896
 measurement at liq. He temps. of small values 4=24464
 measurement, metals, up to 500°C in vacuo 0=5223
 measurement, metals, at high temp. 0=9853
 measurement, solids, molar, calorimeter, 10°K-290°K 3=21607
 measurement, up to 3650°C 0=12531
 metal particles at very low temp., anomaly 2=14383, 16627
 metals and alloys, low temp., use of computers 4=8538
 metals and alloys, meas. by flash method 1=15006
 metals, alloys and various inorganic and organic subst., 1-300°K 1=910
 metals, conduction electrons, effect of electron-phonon interaction 0=11592
 metals, cubic, Debye G and compressibility 1=8884
 metals, Debye temp. rel. to cold neutron scatt. 3=4823
 metals, Debye temp., from temp. dependence of elec. resistance 2=3978
 metals, electron interaction effects, calc. 3=753
 metals, electron-phonon interaction effect errors 4=20211
 metals, electronic, rel. to internal pressure, theory 0=13464
 metals, filaments, meas. by controlled flash heating 3=7379
 metals, Grüneisen constant, rel. to density 2=10747
 metals, low-temp. props 4=12640
 metals in mag. field, electronic contrib. 3=22664
 metals, molten, rel. to conduction, diffusivity, surf. tension 2=17445

Specific heat—contd

metals, 100-900°C, direct meas. apparatus 0=8834
 metals, relationship to thermal cond. 0=17897
 metals, rel. to structure 2=19074
 methyl borate, from spectroscopic data 2=8100
 methyl iodide, cryst., from spectral data 4=28715
 methyl iodide, liquid 2=11356
 methylene chloride, liquid, vibr. spec. heat relaxation 0=6791
 methylphosphonyl dihalides, heat capacity meas. from 15° to 335°K 4=30521
 moisture, evaporation, from capillaries of porous body, thermodynamic calc. 4=11414
 molar heat, temp. function, for 25 gases 1=15956
 nuclear matter 0=11124
 nuclear mag. spec. ht. in ferromag. alloys, internal fields det. 1=8882
 of order-disorder model, 1-dimensional, discontinuity near phase transition 1=9149
 organic compounds, transition to plastic cryst. state 2=10306
 organic liquids, variation with pressure rel. to u.s. propagation 1=15873
 orthorhombic crystals, Debye temp. at 0°K 1=914
 paramagnetic crystal with strong spin-lattice coupling 4=6739
 paramagnetic salts, influence of dipole-dipole coupling 0=11578
 paramagnetic salts, spin-system heat capacity, exper. test of Van Vleck's formula 3=22665
 particle in box 2=1075
 plastics, determination 2=23023
 polyethylene, crystalline, 1.8°-5.3°K 2=14380
 polyethylene, crystallinity dependence 2=23904
 polyethylene, low temp., from force consts. 3=8366
 polymers, linear, at low temp. 0=18384
 polymers, linear, low temp., from force consts. 3=8366
 polypropylene, atactic and isotactic, rel. to structure 3=10597
 polypropylene, rel. to γ -irradiation 3=2728
 polystyrene, in glass-transition interval 4=7736
 polytetrafluoro-ethylene, 80° to 500°K, calc. 4=30533
 propionitrile 2=5222
 propylene oxide, heat capacity from 11° to 300°K 4=22496
 quantum theory, for low temperature variations 0=219
 quartz, crystalline, 2-4°K 0=9852
 quartz sand, rel. to temp. and porosity 2=10328
 rare earth cpds., cubic, calc., from ferromag. spin wave states 4=13219
 rare-earth ethylsulphates 3=25579
 rare earth ethyl sulphates, anomalous, and phonon spectra 4=6714
 rare-earth Fe garnets, at low temp. 0=9855
 rare earth metals 1=3605
 rare earth metals, 0.4-4°K, nuclear term and mag. consts. 4=15429
 relaxing gases, from sound vel. meas. 0=5052
 rock salt, eval. from spectroscopic behaviour 2=6258
 rubber, natural, difference, and compressibility calc. 4=23201
 semiconductors 4=12638
 semiconductors, meas. by Ioffe-Ioffe non-stationary method 1=4490
 silica, vitreous, anomalies 0=11580-81
 simple cubic lattice, calc. 2=18896
 solid air, anomaly 1=7537
 solid solns., dilute, electronic partition function 4=17359
 solid solns., low temp., theory 2=23070
 solids, anharmonic contrib. 2=568-9
 solids, anharmonic correction at high temp. 2=14378
 solids, anisotropic, C_p - C_v reln. demonstration 2=6268
 solids, Debye charact. temp., review 2=10333
 solids, disordered, deriv. from mech. props. 2=14377
 solids, rel. to methyl group internal rotation barriers 3=25197
 solids, molar or atomic, rel. to other props. 0=9854
 solids, theory of surface sp. ht. 3=6475
 solids, Thirring's expansion, extension of range of validity 1=17411
 solids, vibrational, theorem, inflection point, generalization 4=1394
 spinel, many-component, configurational, determ. 2=3838
 splitting of doublet ground state 0=8032

Specific heat—contd

statistical mechanics approach 2=15826
 steam, const. press. on saturation curve 4=11192
 steam; eqns. of state 2=13366
 steel, stainless, type 316, at high temps. 2=4445
 steels, Cr stainless, 30-1000°C, phase transform. 2=23078
 sulphuryl fluoride 0=5016
 superconducting metals 2=7515
 superconductor, rel. to Fermi surface anisotropy 2=1335
 superconductors, anomaly at supercond. transition 3=14445
 superconductors, rel. to electron-phonon interact. 3=3950
 superconductors, ferromag. 1=1863
 superconductors, lattice spec. ht. anomaly, phonon self-energy theory 1=10645
 superconductors, strong coupling 4=27411
 superconductors, temp. dependence 1=6998
 superconductors, type II, mixed state, temp. var. 4=11471
 superparamagnetic particles, temp. dependence calc. 1=14178
 spinel, many-component, configurational, det. 1=19714
 surface sp. ht. of isotropic solid at low temp. 0=20748
 tables, for ideal gases and isotope exchange 1=9418
 tetramethylammonium hydrogen dichloride 2=14303
 theory 4=3990
 thermal capacity, saturated isomerizing vapour 3=11833
 θ (elastic) rel. to θ (calorimetric) near $T = 0^\circ\text{K}$ 4=28343
 thiourea 2=12566
 3d transition element—Al, b.c.c. binary and ternary alloys, low temp. meas. 4=30518
 toluene, solid, liquid and vapour 2=15822
 transition metal alloys, supercond. 4=18616
 transition metals and alloys, rel. to band structure, theory 0=17911
 transition metals, binary phases, superconducting 4=16340
 transition metals, superconducting, meas. 3=7405
 trifluoroacetonitrile 1=11861
 trifluoromethanethiol 0=5017
 trifluorophosphine 2=13484
 true, by microcalorimetry 1=16166
 22 semiconductors 0=1557
 vapour—liquid system near critical point 1=1847
 of vessel with liquid He and paramagnetic salt 1=5387
 water, const. press. on saturation curve 4=11192
 water, Debye temp. 2=1135
 water and steam at high temp. and press. 1=18395
 water vapour, at high temps. 4=16147
 water vapour plasma, 1-30 atm., 1000-30 000°K 1=10701
 water and water vapour in two-phase region 2=13485
 wire, elec. conducting, meas. method 2=23068
 A, from crystal parameters 0=4251
 A, liquid, γ at 90°K at high press. 0=19132
 A, liquid, ratio, press. depend. 1=140
 A, solid, at constant pressure 2=6270
 A, solid and liquid 2=6269
 A, solid, 16-35°K 1=911
 A—Kr mixture, solid, 12°K to m.pt 1=911
 Ag 0=2791-4
 Ag, calc., by modified Houston method 0=7850
 Ag, Debye temperature 1=17425
 Ag, determ. from vibration spectrum data 4=9825
 Ag, electronic, meas. 2=18532
 Ag, Grüneisen constant 1=17429
 Ag, Grüneisen ratio rel. to volume, calc. 3=4828
 Ag, highly pure 2=8171
 Ag iodide, Debye temp., X-ray determ. 4=28373
 Ag, from vibr. spectrum, model 2=23051
 Ag—Mn alloys, 1.4-20°K 0=9859
 Ag—Mn alloys, 1.3-20°K, and in mag. fields 0=18408
 AgNO₃, 300-438°K, 433°K transition 4=15430
 Ag₂O, large crystals 14°-300°K 3=768
 Ag₂O, 2°-80°K, rel. to particle size 3=769
 Ag₂Se, 30°-200°K 3=2826
 Ag—Zn, β , β' and ξ -phases 3=8396
 Al 0=2791-4
 Al alloy, superconducting, down to 1.8°K 2=6281
 Al, calc. by de Launay's method 3=2714
 Al, calc., by modified Houston method 0=7850
 Al, at const. volume, calc. 0=7846
 Al, Debye temp., calc. 2=3843

Specific heat—contd

Al, Debye temp., from electron diff. meas. 3=22656
 Al, Debye temps. calc. from vibr. spectrum 4=6706
 Al, discontinuity, anomalous, at superconducting critical temp. 1=4533
 Al, low temp. 2=6280
 Al, low temp., rel. to band structure 0=9887-8
 Al, near supercond. transition point 3=12029
 Al, superconducting, up to 1 at. % impurities, and forbidden band anisotropy 3=19106
 Al—Fe, superconducting, small amounts of Fe 4=8566
 Al—Mg alloys, low temp. 2=6280
 Al₂O₃, 500° to 2000°K, expt. 2=3839
 α -Al₂O₃, 1200°-2500°K, expt. 2=18529
 Al—Pu alloy, δ -phase stabilized, at < 300°K 1=17412
¹²¹Sb, atomic, 12-273°K 3=12928
 Ar, from acoustic velocity 3=16659
 Ar, adsorbed on graphite, statistical calc. 4=2132
 Ar, C_v meas. near critical pt. 3=1729
 Ar, Grüneisen const., Born's theory 3=25203
 Ar, solid, three parameter interatomic potential calc. 4=17360
 Ar, solid, vacancy contribution 3=8364
 As₂O₃, structural prop. correl. 0=13490
 Au, anomalous lattice values at liq. He temps. 2=10331
 Au, atomic ht., 1.3 to 4.2°K 1=3606
 Au, atomic, 12-273°K, small electron contrib. 4=17364
 Au, calc., by modified Houston method 0=7850
 Au, Debye temp., anomalous, low temp. 4=25854
 Au, highly pure 2=8171
 Au, lattice, calc. 1=7530
 Au, rel. to lattice vibration 2=6262
 AuAl₂, AuGa₂, AuIn₂, similarity, low temps. 4=6743
 Au—Co alloys, 1.2° to 5°K meas. 2=8167
 (Ba_xSr_{1-x})TiO₃ 3=2957
 ABX₂ covalent compounds 2=20947
 ABX₂ covalent compounds 3=2739
 BaTe, X-ray characteristic temp. 4=28372
 Be, calc. 4=20194
 Be, const. vol., from lattice vibr. spectrum 3=10578
 Be, meas. 600-2200°K 1=6074
 Be, metal, Debye temperature 4=1561
 BeO, Debye temp. for neutron scatt. 3=12911
 BeO, irradiated, below 4°K, and He diffusion after annealing 3=15509
 BeO neutron irradiated, superfluid He transition study 1=18693
 BeO, 1.3°-3.5°K, rel. to He aggregation 4=4093
 BeO, 298-1200°K 3=25196
 Bi 4=12882
 Bi, rel. to effective hole mass 2=4031
 Bi, low-temp., calc. 4=1395
 Bi, nuclear quadrupole and electronic, 0.1-2°K 0=9856
 Bi—Pb alloys 2=2402
 Bi₂S₃, structural prop. correl. 0=13490
 Bi₂Te₃ 0=15807
 Bi₂Te₃ 4=13530
 Bi₂Te₃, at 1.37-65°K 0=8858
 Bi₂Te₃, C_p, temp. var. 2=8169
 C_v, near critical pt., gravitational effects in meas. 4=14468
 C_v[T, V(T)], conversion to C_v[T, V(0°K)] 3=6476
 CH₄ β -quinol clathrate, 15°-100°K, and CH₄ motion 3=8284
 CH₂Cl₂, CHDCl₂ and CD₂Cl₂, heat capacity 4=22396
 CH₃D, rel. to Coriolis interaction 4=12426
 (CH₃)₄NBr 2=14381
 (CH₃)₄NCl 2=14381
 CH₃NH₃Al(SO₄)₃.12H₂O, anomalies, rel. to ferroelec. phase transition points 4=22497
 CO occluded in β -quinol clathrate 4=15376
 CO₂, calc., 0°-1000°K, up to 100 bar pressure 4=5231
 CO₂, effect of H₂ and D₂ on relaxation time 3=16658
 CS(NH₃)₂, anomalous, and ferroelectric transform 4=1399
 CaCO₃, 1.6° to 70°K, rel. to antiferromagnetic transition 3=17659
 CaF₂, lattice dynamics theory rel. to expt. 2=3819
 CaF₂, 3.5-300°K 0=6018
 CaO, X-ray characteristic temp. 4=28372
 CaS, X-ray characteristic temp. 4=28372
 Cd, electronic sp. ht. 4=6793
 Cd, at low temp. 2=6279
 Cd, 1.3-4.2°K 1=3607
 Cd, 1.5-4.2°K, Debye temp. 3=2733

Specific heat—contd

Cd, 0.1°–4.2°K, supercond. and not supercond. 4=15426
 CdS, wurtzite, temp. var. calc. 4=3975
 Ce, cubic, calc. 0=11806
 Ce ethylsulphate, rel. to spin–lattice coupling 4=6739
 Ce, at low temp., anomalies explained by structure changes 1=9135
 Ce, 0.4°–4°K, α – β phase mixture meas. 4=12642
 CeMg nitrate, 1.5–10°K 0=20750
 ClO₂F, C_p/C_v, from sonic vel. 0=105
 Co β -quinol clathrate, 15°–100°K, and CO motion 3=8284
 Co, electronic, and energy bands 0=4267
 Co, 50° to 1400°C meas. 4=28369
 Co, magnetic, effect of ferromag. elastic modulus relaxation 4=25856
 Co, below 1°K 0=9860
 CoBr₂·6H₂O, 1.6–5°K, Néel temp. det. 0=3099
 CoCO₃, 1.8° to 70°K, rel. to antiferromagnetic transition 3=17659
 CoCl₂·6H₂O near Néel point 4=30519
 CoCl₂·6H₂O, 1.4–20°K, mag. contribution 0=4266
 CoCl₂, 11–300°K, rel. to antiferromag. ordering 2=6272
 CoF₂, 1°–4.2°K 2=23075
 Co–Fe alloy, at 0.35–0.7°K, hyperfine coupling 0=517
 Co_{0.5}Fe_{0.5}, nuclear mag. spec. ht., 1.6–4.2°K, internal field 1=8882
 Co–Ni alloys, at 0.35–0.7°K, hyperfine coupling 0=517
 Co(NO₃)₂·(6+x)H₂O, anomalous 2=18530
 Cr alum, spin system, calc. 2=18531, 20937
 Cr, anomaly at 38.5°C 0=17893
 Cr, electronic sp. ht. 3=8363
 Cr ferrite, Grüneisen's const., X-ray meas. 4=1407
 Cr, 20–1410°C 0=9853
 CrCl₂, 11°–300°K 3=1061
 CrCl₂, 11–300°K, mag. ordering effects 2=6273
 Cr–Fe alloy, b.c.c., 30–110°K 1=17414
 Cr–Fe alloys 0=7848
 Cr–Fe alloys, 1.4–4.2°K 0=17896
 Cr–Fe, –140 to 350°C, two maxima 2=6275
 Cr–Mn alloys, 1.4–4.2°K 0=17896
 Cr–Re system, rel. to antiferromag.–supercond. transition 4=25853
 Cr–Si system, rel. to mag. susceptibility 4=1802

 Pd, Pd—Ag, Pd—Rh, electronic sp. ht., mag. susceptibility 3=13228
 Pd—Rh alloys, rel. to energy-band structure 1=1441
 Pd—Fe alloys, 1.4° to 100°K 4=25860
 Pd—H solutions, maximum at 55°K 1=17418
 Pd—H and Pd—D systems, anomalies 2=12385

Specific heat—contd

Pd₃Mn₂ alloy, ξ - and μ -phase 4=23033
 Pd and Pd—H alloys, 30–300°K 3=12924
 Pd and Pt chalcogenides, low temp. 1=19717
 Pd and Pt chalcogenides, low temp. 1=19718
 Pr ethylsulphate, from vibr. energy levels 4=1364
 Pr ethylsulphate, rel. to spin—lattice coupling 4=6739
 Pr, hyperfine anomaly below 1°K 4=7222
 Pr, at 0.5–4°K 2=2051
 Pr—Gd, 1.3° to 4°K 4=6748
 Pr, 0.4°–4°K, magnetic and nuclear components 4=9853
 Pt, atomic ht., 1.3 to 4.2°K 1=3606
 Pt—Au alloys, rel. to energy-band structure 1=1441
 Pt—Ir alloys, rel. to energy-band structure 1=1441
 Pt-metal F₀ cps, temp. var., and electronic spectra 4=17365
 Pt metal, Pt—Au and PtIr alloys, electronic sp. ht. 4=28780
 Pu, effect of self-irrad. 2=23076
 Pu, room temp. to melting point 4=9849
 PuC, heat capacity from 400°–1300°K, calc. from enthalpy meas. 4=22495
 PuO₂, low temps. 4=6747
 Rb, atomic heat, electronic and thermal contribs., 0.35–2°K meas. 4=25852
 Rb, and Debye temp. 2=16608
 Rb halides, calc. 0=13480
 Rb, 0.2°–4.2°K, thermal effective mass ratio 4=12643
 RbPF₆, rel. to order—disorder changes 3=12927
 Rb₂SnBr₆, 20–300°K 0=11582
 Rb₂SnCl₆, 20–300°K 0=11582
 Re, 1.2° to 24°K 2=6284
 Re—Fe alloys, nuclear sp. ht. 4=3994
 Ru, 10–273°K 0=1560
 S, liq., pure and containing iodine 2=2711
 S, liquid, containing P, Se or Te 3=5430
 SF₆, 100° to 1500°K 3=21445
 SOF₄, 100° to 1500°K 3=21445
 Sb, atomic ht., 1.3 to 4.2°K 1=3606
 Sb, Debye temps., rel. to longitudinal and transverse vibs. 4=9826
 Sb, temp. depend. 4=1588
 Sb, 20–700°K 3=22659
 Sb₂S₃, structural prop. correl. 0=13490
 Se, 1.7° to 4.2°K 1=19720
 Se, low temp., calc. 3=8362
 Si 1=17399
 Si, Grüneisen parameters 23°–530°K 3=4824
 Si, meas., 1200–1900°K 2=6277
 Si, pure 0=15812
 SiO₂, different forms at low-temp. 4=6749
 SiO₂ glass, low-temp. excess 3=767
 Sm ethyl sulphate, mag. sp. ht. 0=10047
 Sm, hyperfine structure 1=9977
 Sm, 0.4°–4°K, mag. and nuclear contribs. 2=12387
 Sm, 13–350°K 0=2788
 SmMg nitrate, magnetic heat 1=2443
 Sm₂O₃, 10°–350°K, electron and lattice contribs. 3=20105
 Sn alloys, theory and rel. to supercond. transition 2=10330
 Sn, Debye temp. 4=17583
 Sn, grey and white, interreln. 3=11209
 Sn, In, normal and supercond. 2=7516
 β -Sn, normal and superconducting 1=1293
 Sn, normal and superconducting 1=11162
 Sn, supercond., temp. var. 4=21370
 Sn, superconducting, λ -type singularity 2=19818
 SnBr₄, gas, calc. 2=11420
 SnCl₄, gas, calc. 2=11420
 SnI₄, gas, calc. 2=11420
 Sn—Pb eutectic layers, and supercond. proximity effect 4=18612
 Sn—Pb soft solders, 1.3°–20°K 4=6744
 SrTiO₃ 3=2957
 Ta, Debye temp. from elastic const. 3=13325
 Ta, rel. to frequency of lattice vibrations, theory 4=25843
 Ta, superconducting, λ -type singularity 2=19818
 Ta, 1000°K to melting pt. 1=17416
 Ta, at 1000–3000°K 2=2925
 Ta, 1200°–2400°K 3=10596
 Ta₂H 2=2054
 Tb anomaly rel. to mag. transition in Tb₂O₃ 2=21346
 Tb, hyperfine structure 1=17422
 Tb metal, below 1°K 4=9856
 Tb metal, nuclear contribution 1=17423

Specific heat—contd

- Tb, 0.37-4.2°K 3=771
 Tb, 1.4-4.0°K 0=6016
 Te, low temp., calc. 3=8362
 Th, 0.38-3.9°K, rel. to mag. and nuclear components 4=20216
 Th, 25-1000°C 0=17894
 Th—Er alloys, at low temp. 1=11415
 ThO₂, 298-1200°K 1=14182
 Th_{1-x}U_xAl₂, 1.7-20°K, electronic contribution 4=12649
 Ti alloys, dilute hexagonal, meas. 4=18613
 α-Ti, anomalous, rel. to thermal electron transitions 3=20127
 Ti, 1.1-4.5°K 3=15437
 Ti, 600-1345°K 3=22660
 Ti—Co—Ni, electronic, for CsCl structure 2=14382
 Ti—Fe—Co, electronic, for CsCl structure 2=14382
 Ti—Mo alloys, normal and superconducting 1=13046
 Ti, Ti—Mn, Ti—Co, low temp., and supercond. search 4=27436
 Ti—V alloys, electronic, rel. to supercond. data 2=16609
 Ti, V—Ti, electronic sp. ht. 3=25509
 Ti—V alloys, 1.4-4.2°K 0=17896
 Ti—V solid solutions, electronic 3=8367
 Ti₂O₃, 50°-250°C, at 10⁻⁴ mm Hg 1=14183
 Tl, 0.35°-4.2°K, meas. analysis 4=25859
 TlCl, 15-310°K 0=1066
 Tl(1%)—Pb(98%)—Bi alloy 3=6478
 Tm ethylsulphate, 15-300°K, crystal field splitting 2=23032
 Tm, 15 to 360°K 1=11163
 Tm, at 0.5-4°K 2=2051
 U dicarbide, 1484° to 2581°K 3=15438
 U, phase transition in α-type at 42°K 1=15135
 U²³⁵, hyperfine, <0.75°K 4=9850
 UC, 1.5°-4.2°K and 20°-85°K 4=1398
 UC and UC₂ 4=13611
 UC, U₂C₃ and UC_{1.81}, heat capacities, low temp. 4=22498
 UF₆, 1.3-20°K 0=15811
 U—Mo alloy, γ-phase, rel. to Friedel band model 1=17450
 U₃O₇, α and β-phases, low-temp. meas. 2=10329
 V, atomic and electronic heats, 10-273°K 0=20752
 V, lattice, temp. var., renormalization, calc. from vibr. 4=1400
 V, 65°-105°K 2=23077
 V, three models 3=12914
 V, V—(Cr, Ti), electronic sp. ht. 3=25509
 V—Cr alloys, 1.4-4.2°K 0=17896
 V—Cr solid solutions, electronic 3=8367
 V—Fe alloys, 1.4-4.2°K 0=17896
 V_{0.33}Fe_{0.67}, nuclear mag. spec. ht., 1.6-4.2°K, internal field 1=8882
 V₃Ga in high mag. fields, superconductivity 2=11570
 V—Ni solid solutions, electronic 3=8367
 V—Ta alloy, supercond., meas. in high mag. field 4=8576
 W, Debye temp. from elastic constants 3=13325
 W, Debye temps., rel. to X-ray interference 4=12618
 W, using de Launay's electron-lattice interaction 1=19701
 W, electron structure calc. 0=7830
 W, 14-300°K 0=21103
 W, 0-2400°C 2=12386
 W, 10-273°K 0=1561
 W, 1000-3000°K 2=2925
 W, 1200°-2400°K 3=10596
 W, 2400-2820°C 2=18528
 Y ethylsulphate 3=4799
 Y, 1.7° to 4.2°K 1=19720
 YFe garnet, low-temp., spin wave contrib. 4=9855
 YFe garnet, 1.5-4.2°K, lattice and spin-wave contrib. 1=7539
 YFe garnet, 1.45°K, mag. field depend. 0=16143
 YFe garnet, rare-earth-doped, theory 1=14611
 YFe garnet, rel. to spin-wave spectrum 4=7293
 Y_{1-x}Gd_xOs₂, ferromag. superconductor 1=1863
 YH₂ and YD₂, 5-350°K 2=6278
 YH₃ and YD₃ 3=17858
 Yb, heat capacity, from 15°-350°K 4=25861
 Yb metal and cpds., electronic contrib. 4=10348
 Yb, 0-4°-4°K, meas. and theory 3=8368
 YbFe garnet, low-temp., calc. 1=12541
 Yb₂O₃, 10°-350°K, electron and lattice contribs. 3=20105
 Zn, analysis of data 1=6075

Specific heat — contd

- Zn, anomalous lattice values at liq. He temps. 2=10331
 Zn, calc. 4=20194
 Zn, discontinuity, anomalous, at superconducting critical temp. 1=4533
 Zn, electronic, first principles calc. 3=8395
 Zn, Debye temp. from elec. props. 4=12865
 Zn, in normal and supercond. states 0=8947
 Zn, 1.3-4.2°K 1=3607
 ZnBr₂, room temp. to 700°K 4=14156
 ZnCl₂, room temp. to 700°K 4=14156
 ZnFe₂O₄, 1.8-20°K 2=571
 ZnS, Debye temp. 4=13450
 ZnS, long-range and short-range force models, lattice vibrations 0=7847
 Zr alloys, dilute, 1.2°-4.5°K 3=25199
 Zr, 14-300°K 0=21103
 Zr, 1.1-4.5°K 3=15437
 ZrD_{1.58}, 30-500°K 1=11164
 ZrH_{1.58}, 30-500°K 1=11164
 ZrH₂ and ZrD₂ 1=7538

Spectra

AgTe, absorption, three band systems 3=10524

Al₂, 5650-6600 Å bands, rotational analysis 4=9699

AlAu, emission and absorption 3=10505

AlD, 2187 Å band 2=10262

AlH, electronic band, by exploding wire method 4=25635

AlO, A² Σ -X² Σ system, intensity meas. 4=17278

AlO (A² Σ ⁺-X² Σ ⁺) system electronic transition moment var. 4=12442

AlO, arc spectrum 2=3692

AlO, B² π -A² Σ band 4=22346

AlO, bands, visible 3=25089

AlO, electronic band, by exploding wire method 4=25635

AlO, Franck-Condon factors, calc. 2=16521

AlO, from metal-oxygen flame 3=10504

AlO, u.v. band spectra 1=2330

AsO, A-X system, (0, 0) band, rotation analysis 2=18450

AsO, AsO⁺, u.v. band spectra 1=14051

AsO, emission by heavy current discharge 4=30423

Au₂, production and study, state constants 0=5925

AuAl, production and study, state constants 0=5925

AuBa, band 1=19637

AuBa, AuCa, AuSr, vibrational analysis 3=19979

AuBe, Mg, Ga, Si and Ge vibr. and rot. 4=22352

AuCa, absorption band consts. 1=9931

AuH, electronic band, by exploding wire method 4=25635

AuH and AuD, far u.v. 4=30431

Spectra—contd

inorganic molecules, diatomic—contd

AuMg, production and study, state constants 0=5925

AuMg, u.v. band spectra 0=20657

AuSn, visible and near infrared 4=6563

AuTe, emission 3=12819

BCl, ¹ π - ¹ Σ ⁺ bands 4=12443

BF, BCl, attributed to CCl⁺ and CF⁺ 3=8252

BF, electronic 4=6557

BF, isotopic effect in singlet bands 1=3545

BH, BD, absorption, electronic states 4=25636

BO, α and β systems 0=15750

BO, γ -bands of B¹⁰, ¹¹O 1=4938

BO, rotational analysis of u.v. bands 1=2329

B-O system, origin of green bands 1=4937

BaO, A¹ Σ -X¹ Σ system, intensity distrib. 4=15328

BaO, Franck-Condon factors of band system 4=25660

BaO, relative transition probabilities for band systems 1=3553

BaO, shock tube studies, new absorption band system 2=696

BeO, (B¹ Σ → X¹ Σ) bands, transition moment variation 1=14059

BeO, blue-green system, intensity variation, temp. meas. 2=7441

BeO ground state, spectroscopic consts., MO approx. 4=20037

BeO, (B¹ Σ → X¹ Σ), overlap integrals 0=9811

BeS, B¹ Σ ⁺-X¹ Σ ⁺, rotational analysis 4=6558

BiBr, emission, A → X system analysis 3=6389

BiCl, emission, rotational structure, electron trans. 1=7475

BiCl, vibrational analysis of visible emission 1=14039

BiF, band spectra 1=19632

BiF, emission bands, u.v. 2=14288

BiF, rotational analysis, visible band system 2=20797

BiF, u.v. 1=17324

BiF, vibrational anal., A-X system, new bands 4=28182

Br₂, absorption, transient, $\nu'' = 0$ bands 4=1259

Br₂, liquid, Raman spectra 2=7368

Br₂, vac. u.v. resonance spectrum 4=28183

Br₂, BrCl, continuous 4=30426

C₂, A' ² Σ _g-X' ³ Π _u system, analysis 3=8250

C₂, band head intensities, rel. to hydrocarbon arc temp. 3=7484

C₂, bands in King furnace 2=2028

C₂ and CN in maser-induced graphite jets, rel. to temp. meas. 4=5881

C₂, in comet Mrkos 1955e, density determination 1=15431

C₂, electronic band, by exploding wire method 4=25635

C₂, ground state 0=4215

C₂, Phillips system extension 3=8251

C₂, Swan bands 3=19975

C₂, trapped in solid A, Kr, Xe 0=20661

CBR radical, near 3000 Å 3=25092

CCl, band, in halogenated hydrocarbon reacts. with N and O 2=12961

CCl, 2750-2800 Å, band system 1=14005

CCl⁺ and CF⁺, really due to BF and BCl 3=8252

CF, absorpt., pre-dissociation, from fluorocarbon discharge 3=15345

CF⁺ 1=17321

CH 3=7328

CH, band, in halogenated hydrocarbon reacts. with N and O 2=12961

CH, in flames supported by active N 1=13942-3

CH radical, ² π state, dissociation energy 4=12527

CH, 3000-5000 Å, spectrophotometric atlas 1=14042

CN, B² Σ ⁺-X² Σ ⁺g system 2=18452

CN band, in halogenated hydrocarbon reacts. with N and O 2=12961

CN band intensity in low pressure arc 2=1411

CN band, perturbations 2=6188

CN, chem. and mag. enhancement of violet lines 3=8253

CN emission from active N flames 1=14045

CN, in flames supported by active N 1=13942-3

CN, Franck-Condon factors to high vibr. quantum numbers 4=15329

CN, oscillator strength of violet system 2=3761

CN red system, (2, 0) and (3, 1) bands 3=21107

CN, red system, vibr.-rotational theory 3=2611

CN, rotational perturbations, theory 2=22962

deuterides of group V elements, absorpt. spectra 4=6581
 diamond, effect of electron beams 2=12477
 diboranes, B¹¹ labelled, i.r. 4=1272
 difluoramine, i.r. 3=8275
 diiride (N₂H₂), i.r. 4=28214
 disiloxane, far. i.r. 0=20635
 frozen products of gas discharges, exam. of absorption spectrum 0=4420
 germinates, i.r. 2=541
 germyl cyanide 2=20833
 germyl halides, i.r. 4=6593
 glasses (VO₂, PO₂, RO_x type) infrared transmission 1=10047
 halides of group V elements, absorpt. spectra 4=6581
 hexahalide complexes, electron transfer spectra 0=20650
 hexahalide complexes, 4d and 5d, charge-transfer states 3=19972
 "hot" bands, effect of pressure modulation 2=2777
 hydrated electrons 4=20073
 hydrides of group V elements, absorpt. spectra 4=6581
 i.r. absorpt., electro-optical parameters 2=22942
 i.r. absorption, intensities and polarizations, calc. 0=1531
 i.r. band characteristic polarization, intensities 1=14022
 i.r. band intensities 0=20608
 i.r. band intensity and structure 3=25076
 i.r. emission of gases, pressure modulated 2=11430
 i.r., intensity and polarization calc. 0=15721
 i.r. overtones and combination tone intensities, general formula 3=10526
 infra-red combination and overtones intensity calc. 4=22334
 infrared intensity theory in valence-optical scheme 1=14024
 ions, emission, in mol. beam interacting with electrons 4=12474
 MA₃B₃, asymmetric complexes, absorption spectra band splitting 4=12441
 metal cations, with 6 mols. of H₂O of coordination 4=28205
 metals carbonyls, low-frequency fundamentals 2=16530
 nitrile band, solvent effect on intensity 0=490
 nitrites, double and complex, i.r. 4=15351
 paramagnetic salts, absorption by hydrated ions, theory 0=5939
 platinum complex bonds, i.r. bands 4=25715
 polyhalide ions, i.r. 1=14029
 polythionates, u.v. structure study 1=2331
 pyroselenites, i.r. absorption study cation X₂O₆²⁻ 0=11526
 pyrosulphates, i.r. absorption study cation X₂O₆²⁻ 0=11526
 quartz vapour, emission, 2500-4500 Å 0=1525
 Rydberg levels in O-containing mols. 3=15321
 s-tetrazing (C₂H₂N₄) 2=1987
 silane, i.r. intensities 2=22982
 silanes, α and β-functional, rel. to chemical props. 4=12491
 thiocyanates, complex, i.r. and Raman frequencies 2=18818
 transition-element complexes 0=5958
 transition metal complexes, effect of different ligands on hydrogenic vibrations 1=869
 transition-metal dihalides, i.r. 2=14274
 transition metal ions, halide complexes 3=15354
 uranyl nitrate, absorption bands analysis 3=8282
 uranyl salts, i.r. 4=22383
 vibrational, calc. methods 4=6524
 water sorbed on synthetic zeolites 1=1460
 water vapour, far. i.r. 1=18596
 water vapour, i.r., rel. to adsorption on cell wall and N₂ addition 4=5247
 water vapour i.r. bands 1=6590
 AgClO₃, liq., i.r. refl., analysis 2=14275
 AgNO₃, liquid, i.r. reflection 2=7214
 AlF₃, i.r. absorption, 1340-1424°K 3=22553
 Al₂O₃, gaseous, i.r. spectrum 4=25666
 Al₂O₃, α-phase, defect band due to electrons 2=12478
 AsH₃, i.r., rel. to NH₃, PH₃, SbH₃ 2=8095
 B hydrides 4=21460
 B₂F₄ gas, i.r. spectrum 4=21187
 BF₃, i.r. intensity calc. 0=17747

 2 BaO.3 SiO₂, infrared 1=20551
 2BaO.3SiO₂, infrared 2=8834
 Be₂O₃, matrix isolated high-temp. vapour 2=18501
 BrCN, i.r., vibr.-rot. structure meas. 2=14251
 BrCN, vibration-rotation 3=12834
 BrF₃, analysis 3=2631
 BrF₃, i.r. absorption 2=16523
 C₃, absorpt., vapour condensed in solid Ne, A, Xe 2=22976-7
 C₃, oscillator strength for 4050 Å bands 2=6166
 CCl₄, absorpt., in strong i.r. band region 4=22397
 CCl₄ in cyclohexane soln. 2=1153
 CF₂ 4=28209
 CF₃, absorpt., pre-dissociation, from fluorocarbon discharge 3=15345
 CF₃ radical, absorption 1=2317
 CF₂ trapped in argon matrix, u.v. absorpt. 2=18492
 CF₂Br-CCl₂Br 1=14026
 CFCI₃, 100-180 Gc/s 4=6616
 CH₃OH, microwave 2=14269
 C₂N₂¹⁵, gaseous, i.r. spectrum 4=26211
 CO₂ 0=7779
 CO₂, absorbed on silica-supported Fe 2=23963
 CO₂, absorpt. in far i.r., collision-induced 3=23932
 CO₂, absorption in extremen u.v. 0=7781
 CO₂, adsorbed on chromia-alumina and Al 3=3359
 CO₂ in atmosphere, weak telluric band 3=9045
 CO₂, band intensity calc. from i.r. dispersion data 1=6012
 CO₂ emission in CO flames 4=6560
 CO₂, emission, excited by protons and H atoms 3=15338
 CO₂ emission meas., multiple beam interferometric method 4=27310
 CO₂, enriched with 10 at.% O¹⁸, i.r. spectrum 4=12477
 CO₂, excited states in CO flames 3=25091
 CO₂, 15-18 μ, high resolution 2=1997
 CO₂, 4.3 μ band emission at 1200°K 4=6585
 CO₂, 4.3 μ band, lineshape in wing beyond band head 4=25669
 CO₂ gas, radiation, shock wave heated 3=11835
 CO₂ gas, ν₂ fundamental at 1200°K, model 3=5467
 CO₂, "hot" bands, effect of pressure modulation 2=2777
 CO₂, i.r. absorption lines, 5.3-4.6 μ 3=19991
 CO₂, i.r. absorption in vibration-rotational bands 0=9793-4
 CO₂, i.r. band, excited by active N 3=25108
 CO₂, i.r. emissivity, 4.3 μ band 3=17584
 CO₂, integrated intensities, 2.7 μ, 1200°-1800°K 4=17290
 CO₂, intensity meas. rel. to planetary spectra 4=25640
 CO₂, interferometric in far i.r. 1=841
 CO₂, molec. crystals, far. i.r. spectra 4=20446
 CO₂, ν₃, 4.3 μ absorption, 1200° to 2400°K 3=1731
 CO₂, 1850 to 4000 Å, absorption 4=11249
 CO₂, 1.9 μ bands, integrated intensity meas. in range 1400°-2500°K 4=12475
 CO₂, Rydberg absorption series 2=16524
 CO₂, spectral emissivity in 4.3 μ region 1=4379
 CO₂, test of theoretical absorpt. band model approx. 4=9743
 CO₂, total absorptance in i.r. 3=14216
 CO₂, total emissivity at 1000°-4000°K 4=12476
 CO₂, transmission, shock-tube meas., 1500°-3500°K, 4.25 μ 4=22373
 CO₂, 2.8-4.2 μ, band constants 2=20827
 CO₂, 2.7 μ band, i.r. spectral emissivities 4=20064
 CO₂, 2.7 μ band, 1200°-3000°K intensity meas. 4=3871

Spectra—contd

inorganic molecules, polyatomic—contd

- CO₂, 2.7 μ region, i.r. spectral emissivities 2=8094
 CO₂, 2350 cm⁻¹ absorption at high temp. 2=14263
 CO₂, u.v. absorption 2=14286
 CO₂, u.v. absorption, shock-wave heated, to 6300°K 4=5249
 CO₂, vibration band shift in solvents 2=15598
 CO₂⁺ electronic spectrum, weaker bands explanation by antisymmetric stretching frequencies 4=30442
 CO₂⁺, meas. in mol. beam crossing electron beam. 4=12474
 CO₂⁻ radical, trapped 3=6418
 C¹²O₂, rotational perturbations 4=9736
 C₃O₂, i.r. absorption, $\Sigma_u - \Sigma_g$ and $\pi_g - \pi_u$ 4=12478
 C₃O₂, i.r. absorption in solid Ar matrix 3=10527
 C¹³O₂, i.r., rotational perturbations 3=6399-400
 CO₂-H₂O hot mixtures, spectral emissivities in 2.7 μ region 1=11097
 COS 0=7780

Spectra — contd

inorganic molecules, polyatomic — contd

- LiClO₄, liq., i.r. refl., analysis 2=14275
 Li₂F₂, i.r. in solid Ar, Kr and Xe matrices 3=8261
 Li₂O and Li₂O₂, i.r. matrix-isolation meas. 4=3862
 MO(CO)₆, vibr. spectrum rel. to force constants 2=14245
 Mg₂Ge, n-type, i.r. absorpt. 2=4152
 Mg(Ni)F₂, mag., dipole character, from pleochroism 3=19993
 MgOH, u.v. emission 2=8105
 Mg₂Si, n-type, i.r. absorpt. 2=4152
 (MnO₄)³⁻ in alkaline soln. 4=20068
 Mo halides, far-i.r. absorption 4=3877
 MoCl₅, visible and u.v. 2=2002
 MoF₆, vibrational spectra 2=14276
 NCN free radical 4=28280
 NCO radical, electronic band system 0=2765
 N₂D₄, i.r., and vibr. freqs. 4=12486
 N¹⁴D₃, inversion line J = 6, K = 6, hyperfine structure 3=2633
 NF₂, absorpt. spectrum 4=22380
 NF₂ radical, i.r. spectrum 1=17319
 NF₃, vacuum u.v. 1=6024
 NF₂ radical, electronic absorption spectrum 4=28281
 NF₂ radical, i.r. 2=20883
 NF₃, i.r. intensity calc. 0=17747
 N₂F₂ isomers 1=12326-7
 N₂F₂ isomers, infrared 1=3541
 NH₂, in comet Mrkos, emission mech. 2=13116
 NH₂ radicals, absorption spectra with N¹⁴, N¹⁵, H and D 0=4214
 NH₃ 0=4201
 NH₃, adsorbed on Vycor glass, i.r. absorption bands 2=6858
 NH₃, absorption, 1440-1840 cm⁻¹ and 510-1280 cm⁻¹ 0=5934
 NH₃ adsorpt. on Vycor glass, i.r. study 4=20817
 NH₃ atomic clock 1=18343
 NH₃, continuous absorpt. spectrum 4=25690
 NH₃, emission, excited by protons and H atoms 3=15338
 NH₃, gaseous emission of i.r. 0=8794
 NH₃, in high tension discharge 3=4762
 NH₃, i.r. rel. to PH₃, AsH₃, SbH₃ 2=8095
 NH₃, i.r., theory of intensities 0=4203
 NH₃, i.r. and u.v. 3=2632
 NH₃, interferometric in far i.r. 1=841
 NH₃, isotope exchange equilb. const. from i.r. spectra 1=11610
 NH₃, J = 3, K = 3 line shape, rel. to pres. and microwave power, 23.86 Gc/s 3=3837
 NH₃, Jupiter high dispersion spectra 0=14397
 NH₃, magnetic h.f.s. 1=14020
 NH₃, 1850 to 4000 Å, absorption 4=11249
 NH₃, 1600 Å band system 1=8845
 NH₃, rotation in solid A and N 1=6010
 NH₃, in solid argon 1=11100
 NH₃ suspended in solid N₂, i.r. 2=4151
 NH₃, u.v. absorption 2=3749
 NH₃, u.v. absorption bands 4=6583
 N₂ + H₂, in high tension discharge 3=4762
 N₂H₄, in high tension discharge 3=4762
 NH₂D, interferometric in far i.r. 1=841
 NH₂H₂PO₄, i.r. absorpt. 3=15342
 NH₂NH₂: N₂ system, i.r. matrix-isolation 3=15346
 NH₃OH salts, and deuterated counterparts, i.r. 2=540
 N₂-N, existence in solid state, discharge product 0=4419
 N-O compounds 1=4941
 NO₂, abs. i.r. intensity, meas. rel. to temp. 2=12328
 NO₂, absorption, 1650-1350 Å 2=12334
 NO₂, absorption of visible light, temp. depend. 0=1524
 NO₂, in air afterglow 0=790
 NO₂, emission, max. intensity freq., calc. 3=19994
 NO₂, isotopic molecules 1=19636
 NO₂, Rydberg series, rel. to ionization potential 2=13535
 NO₂ ion, solvent band shifts and electronic transition assignments 4=3878
 NO₃ ion, u.v. bands and electronic transitions 2=20837
 NO₃⁻, in molten salt, charge transfer 4=15338
 NO radical, trapped 3=6418
 N₂O 0=7780
 N₂O, rel. to atm. abundance 2=17126
 N₂O, 4.5 μ, band model appl. 4=25602

Spectra — contd

inorganic molecules, polyatomic — contd

- N₂O, i.r. absorpt., 1830 cm⁻¹—2270 cm⁻¹ 4=15350
 N₂O, i.r. absorpt. intensities meas. 2=3744
 N₂O, i.r. band, excited by active N 3=25108
 N₂O infrared, rel. to relaxation time meas. 1=19630
 N₂O, isotopic, i.r. spectra 4=20069
 N₂O molec. crystals, far i.r. spectra 4=20446
 N₂O, and N₂O-N₂ mixtures, total i.r. absorbance bands rel. to conc. and press. 2=19619
 N₂O, 02²0-01¹0 band 4=28221
 N₂O, 1.2-3 μ 3=24023
 N₂O, 1850 to 4000 Å, absorption 4=11249
 N₂O, precise i.r. wavelengths 1=12985
 N₂O, press.-modulated, i.r. emission 2=11429
 N₂O, pure rotational absorption lines 3=24019
 N₂O, rotation-vibration spontaneous emission probability 4=20070
 N₂O, test of theoretical absorpt. band model approx. 4=9743
 N₂O, vibration-rotation bands, 2395-3510 cm⁻¹ 1=832
 N₂O, i.r. absorption in solid, unstable isomer 0=17750
 N₂O₄, abs. i.r. intensity, meas. rel. to temp. 2=12328
 N₂O₄, assignment of 3.21 μ band 3=2666
 N₂O₄, ht. of dissociation determ. 2=2027
 N₂O₄, i.r. absorption in solid state, unstable isomers 0=17750
 N₂O₄, i.r., nonplanar isomer 0=2751
 N₂O₄, isotopic molecules 1=19636
 N₂O⁺, meas. in mol. beam crossing electron beam 4=12474
 N₂O⁺, radiative lifetime of B²Σ⁺ state 0=15754
 N₂¹⁴,¹⁵O¹⁶, N¹⁵N¹⁴O¹⁶, absorpt. rot., fermi diodes 4=25676
 N₂¹⁴,¹⁵O₄, i.r. spectra, gaseous and liquid 0=13436
 NO₂F complexes with BF₃, PF₅, and SbF₅ 1=2325
 NT₃, ν₃ and ν₁ bands meas. 4=6576
 NT₃, ν₂ and ν₄ bands 2=6163
 NT₃, pure rotational spectrum 2=22980
 NaAlF₄, i.r. absorption, 1200°-1600° K 3=22553
 NaCN, i.r. 1=14028
 NaClO₃, liq., i.r. refl., analysis 2=14275
 NaH₂F₃, rel. to HF, KHF₂, KH₂F₃ 4=6568
 NaNO₃, lattice frequencies, rotational barriers 2=16835
 Nb oxide, band system 0=2766-7
 NbCl₅ 2=2002
 Nd chloride, in alcohol-water, absorption, temp. depend. 3=21374
 Ni(II) complexes 0=2749
 NiCl₂ 1=8848
 NpF₆, theory 0=7768
 (O₂)₂, absorpt., press. 2-35 atm, 12600-3600 Å 4=25677
 O₃, absorption profiles in far i.r., interpretation 4=28224
 O₃, pure rotational absorption, 125-500 μ 0=17748
 OCS 4=27314
 OCS, J = 0 → 1 transition study 1=14019
 OCS, perturbation in 003 band 2=16546
 OCS, vibration-rotation bands 2=14252
 Os(IV) hexahalides, far u.v. absorpt. bands 2=22981
 OsF₆ 0=4202
 OsF₆ 1=3543
 PCl₃, far i.r., rel. to force constants 2=12329
 PCl₄F, PCl₃F₂, PCl₂F₃ and PF₅, i.r. spectra giving molec. structures 4=25679
 PCl₃, i.r., force constants calc. 1=13980
 PH₂ and PD₂, electronic absorpt. spectrum 4=28168
 PH₃, i.r. rel. to NH₃, AsH₃, SbH₃ 2=8095
 PH₃, i.r., theory of intensities 0=4203
 PH₃, phosphine, near u.v. absorption 3=19996
 POCl₃, i.r. absorpt. intensity of symmetrical vibrations, effect of O¹⁸ 4=25680
 POH group, i.r. absorpt. bands 2=16531
 PbNO₃, lattice frequencies, rotational barriers 2=16835
 PmCl₃ dissolved in D₂O, absorption 2=8060
 Pt(IV) hexahalides, far u.v. absorpt. bands 2=22981
 Pt metal F₆ cpds, electronic, and specific heat, temp. var. 4=17365
 PtF₆ 0=4202
 ReF₆ 0=20624
 ReF₆, rotl. Raman spectrum, Rayleigh scatt. depolarization 3=2623
 ReF₆, vibrational spectra 2=14277
 RhA₆ type complexes, visible and u.v. 4=15354

Spectra—contd

inorganic molecules, polyatomic—contd

- RhF_6 , i.r., Jahn-Teller effect 3=12839
 $\text{Rh}_2(\text{CO})_4\text{Br}_2$, i.r., rel. to structure 2=10234
 $\text{Rh}_2(\text{CO})_4\text{Cl}_2$, i.r., rel. to structure 2=10234
 RuF_6 , i.r., Jahn-Teller effect 3=12839
 RuO_4 , infrared 1=4934
 SCl_2 , i.r. in gaseous state 2=22957
 S_2F_2 , second FSSF structure isomer 4=6604
 SF_6 , i.r. intensity calc. 0=17747
 $[\text{SN}]_x$ polymer, rel. to semiconductivity 4=15545
 SO_2 , absorpt., α_2 system, force consts., isotope effect 4=25683
 SO_2 , absorption profiles in far i.r., interpretation 4=28224
 SO_2 , absorption, 2500-2000 Å 4=12489
 SO_2 , collision broadening 3=17621
 SO_2 , rel. to dissociation and recomb. 2=20878
 SO_2 , i.r., theory of intensities 0=4203
 SO_2 , line broadening by N_2 3=8279
 SO_2 , rotation spectrum 13 000-25 500 Mc/s 3=4763
 SO_2 , rotation-vibration spontaneous emission probability 4=20070
 SO_2 , rotational analysis of bands of 3800 Å system 4=6602
 SO_2 , rotational spectrum 3=15353
 SO_2 , rotation spectrum, 1st vib. state 3=12840
 SO_2 , u.v. absorption 4=12488
 SO_2 , vac. u.v. 2=6179
 SO_3 , gaseous 2=6161
 $\text{SO}_2^{16,18}$, absorption in vac. u.v. 4=6601
 SO_3^{16} impurity, vibration in KCl crystals 1=12497
 $\text{S}^{32}\text{O}^{16}\text{O}^{18}$, $\text{S}^{32}\text{O}^{18}\text{O}^{18}$, rot. and centrifugal distortion consts. 4=9747
 $\text{S}^{32}\text{O}^{18}\text{O}^{16}$, rot., (0, 0, 0) 4=28229
 $\text{S}^{32}\text{O}^{18}$, $\text{S}^{32}\text{O}^{18}\text{O}^{16}$, rot., (0, 1, 0) 4=28228
 $\text{S}^{34}\text{O}^{16}\text{O}^{18}$, $\text{S}^{34}\text{O}^{18}\text{O}^{18}$, ground state, rotational 4=28230
 $\text{S}^{32}\text{O}^{16}\text{O}^{16}$, rotational lines in 8000-38 000 Mc/s region, rotational consts. and coeffs. of distortion, calc. 4=30445
S-S bonds, u.v., theory 2=6207
 SbCl_3 , i.r. 1=4936
 SbCl_5 , i.r. 1=4936
 SbH_3 , i.r., rel. to AsH_3 , NH_3 , PH_3 2=8095
 SeO_2 emission bands 2=8103
Si carbides trapped in neon and argon matrices at 4° and 20° K, i.r., visible, and near u.v. 4=25681
 Si_2 , Si_3 and Si_4 trapped in neon and argon matrices at 4° and 20° K, i.r., visible, and near u.v. 4=25681
 SiF_2 , u.v. band 2=16532
 SiF_2 , u.v. emission 2=6182
 SiF_4 , i.r. intensity calc. 0=17747
 Si_2H_6 , i.r. analysis 2=16529
 $(\text{Si}_2\text{O})^{2-}$ type anions, i.r. vibrational spectra 1=2327
Sn-F complexes 1=833
 SnH_4 , i.r. spectrum 1=7471
 SrNO_3 , lattice frequencies, rotational barriers 2=16835
 TcF_6 , vibrational spectra 2=14276
 ThCl_4 , infrared 1=11790
 ThF_4 , infrared 1=11790
 TiI_4 , normal vibration frequencies and thermodynamic functions 0=1496
Ti (III) complexes 2=3775
 TiN_4 , absorption 3=19999
U compounds, tri and tetra-valent, and U electron structure 3=1216
 UO_2^{++} , ligation effects 1=11104
 VCl_4 , i.r., vibr. bands 4=1281
 VCl_4 , 9 kK band intensity and molecular association 4=3880
 VCl_4 , u.v. 4=9749
 VCl_4 vapour, Jahn-Teller splitting 2=6162, 20842
 VF_5 , i.r. spectrum from 3-24 μ 4=25687
 VOF_3 , i.r. spectrum from 3-24 μ 4=25687
Va-O compounds, i.r. absorpt., vibr., and structure 3=22574
W halides, far-i.r. absorption 4=3877
 XeF_4 , semiempirical MO treatment 4=17299
 XeOF_4 , infrared, rel. to Xe-O bond 3=17580
 XY_3ZV_3 , electro-optical parameters calc. 2=22991
Zn cpds; shock tube studies, emission band 2=696
 ZnIn_2S_4 , infrared absorption 1=10066
 ZrCl_4 , i.r. 1=4936
 ZrCl_4 , infrared 1=11790
 ZrF_4 , infrared 1=11790

Spectra — contd

inorganic molecules, polyatomic, radiofrequency

- See also Nuclear magnetic resonance and relaxation;
Paramagnetic resonance and relaxation.
ammonia absorption lines, frequency shift 1=2316
cis- N_2F_2 , microwave spectrum 3=25111
difluoramine 3=8274
energy levels of slightly asymmetric top 0=13431
hydrazine, internal motions 3=10509
multiquantum transitions, exemplified by
DPPH 4=25604
paramagnetic centres, microwave 4=4398
l-type doubling and resonance, interpret 3=19960
 $\text{CO}(\text{CN})_2$, calc. 4=22394
 CO_2 at 1200°K, rel. to gas effects 3=5467
 ClO_2 2=20829-30
 ClO_2 , Stark and Zeeman effects 2=20831
 $\text{Cl}^{35}, \text{Cl}^{37}\text{O}_2$, rotational assignment 1=3536
DCN and HCN, vibration-rotation bands 4=20066
 DN_3 , microwave and millimeter wave spectra 4=20067
 D_2O , microwave h.f.s. 0=20667
 F_2CO , microwave, rel. to vibr. states 3=12836
 $\text{F}^{35}, \text{F}^{37}\text{ClCO}$, centrifugal effects analysis 2=18467
 $\text{F}_2\text{DC-CD}_2\text{F}$, rot., 7-30 kMc/s 4=25672
 $\text{F}_2\text{HC-CDHF}$, 7-25 kMc/s, Stark modulation 3=17593
 F_2O 2=3737
 $\text{HC}^{13}\text{N}^{15}$, resonance at 3.5 mm 3=14767
HDO, h.f.s., beam-maser spectrometry 4=9733
HDO, microwave h.f.s. 0=20667
HDO, microwave series, $\Delta J = 0$ 1=4930
HDS, h.f.s., beam-maser spectrometry 4=9733
 HN_3 , hydrazoic acid, rel. to quadrupole coupling constants 4=3873
 HN_3 , microwave and millimeter wave spectra 4=20067
 HN_3 , N^{15} substituted 4=28220
 H_2O_2 , e.s.r. 0=10678
 H_2O , 2.7 μ bonds, calc. 4=30447-8
 H_2S , absorpt. meas. 3=21984
 N_2F_4 0=2752
 NH_3 , inversion frequency, pressure shift 0=13442
 NH_3 , inversion vibr., influence of solid adsorbent, study by microwave absorpt. 4=6582
 NH_3 , line breadths 1=6006
 N^{14}H_3 , refractive index in microwave region 3=21362
 NH_2D , microwave spectrum, hyperfine structure 4=28206
 NH_2D and ND_2H , microwave absorption and Stark effect 4=12479
 NH_2NO_2 , NHDNO_2 and ND_2NO_2 4=1278
 NO_2 , fine structure, theory 0=2761
 NO_2 , microwave spectrum, fine structure and mag. coupling 4=22379
 $\text{N}^{14}\text{O}^{18}$, vibr.-rot. bands at 4.5 μ 3=6404
 NSF , microwave 3=22563
OCS, saturation of rotational resonances 0=5918
OCS, self-broadening, quadrupole moment det. 4=25678
 $\text{O}^{18}\text{C}^{12}\text{S}^{32}$, microwave spectrum 2=5494
 OF_2 1=6007
 OF_2 3=8278
 OF_2 , spin-rotational hyperfine structure 3=19995
 PH_3 , k-type doubling 0=13440
 SF_4 2=6125
 SF_5Br , microwave rotational spectrum 3=22572
 S_2F_2 , microwave spectra 4=3879
 SO_2 , ~4, 8 mm 4=9748
 SO_2 , microwave spectrum in excited vibrational state 4=22382
 SO_2 , millimeter wave spectrum 4=15356
 SO_2 , molecular interaction and linewidth 3=12841
 SO_2 , rot. 4=28227
 $\text{S}^{34}, \text{S}^{32}\text{O}_2$, 25-27.5 Gc/s 3=15351
 S^{33}O_2 2=10841
 $\text{S}^{33}, \text{O}_2$, h.f.s., semi-rigid rotor interpretation 0=5917
 S^{34}O_2 , rot. spectrum in first vibr. excited state 3=15351
inorganic liquids and solutions
absorption rel. to fluorescence spectra, exptal. support for formula 1=18411
actinide 4+ ions, rel. to free ion spectra 4=28316
alkali metals, absorption perturbations, rel. to absorbed H, 400°-500°C 3=5443
alkali nitrates, liquid, i.r. reflection 2=7214
alkali nitrates and nitrites, i.r. absorption above and below melting pt. 0=16069

Spectra—contd

inorganic liquids and solutions—contd

- alkylammonium salts, i.r. bands, hydrogen bonding 4=22386
 anthracene, in solution, rel. to molec. vibrations 2=14374
 Chicago research (1958) 0=9810
 complex mols., absorption—fluoresc. noncoincidence 4=186
 dielectrics, radiofrequency, rapid measurement
 1-10 000 Mc/s 1=10796
 elasticoviscous liquids, relaxation spectrum 1=15884
 electronic spectra of molecules in two-component
 solns. 4=29633
 halide ions in solution, solvent effects 1=8124
 halide solutions, absorption by dihalide ion after flash
 photolysis 0=10357
 hydrates, H-bond i.r. absorption 1=15882
 i.r. absorption lines, rel. to temp. 2=9279
 i.r. band widths compared with corresponding Raman
 bands 1=2758
 i.r., solvent effects 3=22521
 iodide, solvated, u.v. absorption, pressure effects 4=184
 iodine solns., u.v. and visible absorption peaks 0=16705
 ionic interactions in solns. of electrolytes 1=137
 ionic melts, u.v., changes on melting 2=16822
 ionic salts, fundamental absorpt. band in far
 u.v. 4=179
 light source, modified Maekiev arc 4=8435
 and luminescence, viscous quenched solns. 4=2691
 measurement, using multiple attenuation total reflection,
 opaque 3=18989
 molecular excited dipole moment from variation with
 solvent 4=15321
 quasi-lattice, excitation rel. to light scatt. 2=7213
 Raman, H_2 , D_2 , and HD, high resolution 2=2721
 reflection, i.r., rel. to optical constants 1=7698
 salts, fused, i.r. techniques using Si 4=27181
 solutions, aq., pressure effects on charge-transfer and
 transition metal ion spectra 3=1690
 solvent effects, i.r., allowance for in analysis 4=7799
 transition metal ions and complexes in D_2O , isotope
 shifts 0=3531
 uranyl nitrates, solutions, absorption spectra 1=4344
 uranyl nitrates, solutions, absorption spectra 1=10514
 uranyl salts, rel. to luminescence 2=15603
 water drops, i.r. absorption cross. sect. 2=11026-7
 water $\sim 8000\text{ cm}^{-1}$, rel. to combination
 vibrations 4=21139
 water, $\sim 8000\text{ cm}^{-1}$, rel. to H-bonded polymers 4=21140
 water, i.r. 0=82
 water, i.r. spectra 1=6860
 water, ionic solns., H-bonding, near i.r. meas. 4=154
 water layers, adsorbed on alkali halides 0=10375
 water, O_2 u.v. absorption bands 2=5020
 water, pure, i.r., rel. to H-bond polymerization 4=153
 water, soln. of alkali halides, Raman spectra 2=5021
 water, sonoluminescent spectra, effect of dissolved
 A, He, O_2 , N_2 1=4345-6
 water, sorbed onto zeolite, absorption bands 0=10376
 water, vibration 2=10321
 AgBr sols, Tyndall, higher order 3=13629
 AgNO₃, liquid, i.r. reflection 1=15885
 AgNO₃, liquid, i.r. reflection 2=7214
 AlCl₃ in SOCl₂, Raman, 0.11-0.73 mole per mole 3=14170
 B₂O₃, infrared reflection 1=11379
 B₂O₃, molten, i.r. absorption 1=5346
 Bi metal in molten BiCl₃, solute species
 equilibrium 4=5185
 Bi-BiCl₃ molten system, absorption 2=19563
 CCl₄ in cyclohexane 2=1153
 CCl₄, intense i. r. absorpt., 740-810 cm⁻¹ 4=30455
 CCl₄, infrared intensity and breadth calc. 1=9394
 CO₂, dissolved in CCl₄ and CS₂, i.r.
 absorption 1=18412
 CO, i.r. 3=1693
 CO, in liq O₂, N₂ and Ar, O-2 transition 4=25638
 CO, solns. in N₂ and air 3=17572
 CS₂, absorption spectra 1=2757
 CS₂ in CCl₄, i.r. fundamentals 2=1153
 CS₂, infrared intensity and breadth calc. 1=9394
 CS₂, Raman spectra at 28°C and -80°C 4=5182
 CaBr₂, impurity complexes, u.v. 4=1733
 Ca₂, impurity complexes, u.v. 4=1733
 Co halides in organic solvents 4=29634
 Co²⁺ and Ni²⁺ in sulphate media (melts) 2=17463

Spectra—contd

inorganic liquids and solutions—contd

- Cr³⁺, in solutions, absorption bands 0=10041
 CuCl-LiCl fused system 4=183
 CuCl₂ fused mixtures with LiCl and KCl 4=183
 CuSO₄, Cu²⁺ absorption, water cluster 1=11756
 D₂ in liq. Ar, i.r. induced absorpt. 4=27177
 DCl solution in heavy water, i. r. spectrum 4=24218
 D₂O, vibration 2=10321
 Eu(III) aqua ions absorption bands, with sulphate
 ligands 4=2685
 Eu³⁺, 0.35 to 2.6 μ 3=9462
 Fe(CO)₅, i.r., low-frequency 3=23883
 Fe(CO)₅, far i.r. spectrum 4=26201
 Ge, reflectivity, rel. to carrier formulae 3=14167
 Ge₂H₆ and Ge₂D₆ 3=2627
 Ge₂H₆ and Ge₂D₆, Raman spectra 4=9739
 H₂, i.r. fundamental band 0=4196
 H₂ in Ar, induced fundamental band 4=3855
 H₂ in liq. Ar, i.r. induced absorpt. 4=27177
 H₂ in CCl₄ and CFC₂.CF₂Cl, i.r. 2=9280
 HCl in liquid Xe 2=17464
 HCl, in solution 0=15702
 H₂O, electron beam effects 4=20073
 H₂O, H-bond i.r. absorption 1=15882
 H₂O, HDO, D₂O, i.r. 4=11199
 H₂O, HDO, D₂O, u.v. absorption 1=852
 H₂O, i.r., and vapour, mol. aggregation differences 4=21138
 H₂O, near i.r. absorpt., 27°-209°C 4=21137
 H₂S and HDS, comparison of i.r. absorption 1=18413
 He, energy transfer obs. 4=18517
 HeII, excitation spectrum at T = O 4=11106
 Hg, dissolved in A 1=15842
 I⁻, in molten salt, charge transfer 4=15338
 I₂ in pyridine 4=28193
 KAuCl₄ in HCl, u.v. spectrum 1=12885
 K₃Fe(CN)₆ 1=11368
 KNO₃, liquid, i.r. reflection 1=15885
 KNO₃, Raman spectra with ionic admixture 4=16115
 KNO₃-AgNO₃ fused system 4=183
 KOH, molten, i.r. reflection 2=1150
 KSCN, 250, 400°C 4=8209
 LiClO₃-H₂O fused system 4=183
 LiF-KF and LiF-KF-ZrF₄, molten 4=2689
 LiNO₃, i.r. absorption 0=6926
 LiNO₃, liquid, i.r. reflection 1=15885
 LiNO₃, mixtures with NaNO₃, LiOH and H₂O, fused 4=183
 LiOH, molten, i.r. reflection 2=1150
 LiOH-NaOH fused system 4=183
 MnBr₂²⁻ in acetonitrile soln. and Mn²⁺ electronic
 struct. 4=15349
 MnBr₂[OP(C₆H₅)₃]₂ in acetonitrile soln. and Mn²⁺ electronic
 struct. 4=15349
 Mn(II) and Co(II) in fused halides 2=15594
 MoO₄²⁻, i.r. spectrum 4=26213
 N oxides-H₂ system, absorption at 357 m μ 4=14168
 N₃⁻ in solution 3=21377
 NO in Kr and methanol solns., charge-transfer
 absorption spectra 4=21136
 NO in liquid Kr 3=15685
 NO, spin-forbidden transition in soln. 2=1148
 NO, in various solvents, near u.v. absorption, HONO
 formation 2=19561
 NO₃⁻ in ionic melts, u.v. rel. to positive ions 2=15593
 NO₃⁻ in molten salt, charge transfer 4=15338
 NO₃⁻ in solution, absorption spectra 2=5024
 Na, in NH₃, reflection, i.r. 2=1151
 NaF-KF-ZrF₄, molten mixture, i. r. 4=2689
 NaNO₂, i.r. absorption 0=6926
 NaNO₃, liquid, i.r. reflection 1=15885
 NaNO₃, Raman spectra with ionic admixture 4=16115
 NaOD solution in heavy water, i. r. spectrum 4=24218
 NaOH, below melting point 1=11381
 NaOH, molten, i.r. reflection 2=1150
 NaSCN, 300, 400°C 4=8209
 Nd³⁺, 0.35 to 2.6 μ 3=9462
 NdCl₃ in alcohol-water soln., absorption, -87°C 3=1691
 NdCl₃ in alcohol-water solutions, absorption 3=18816
 NiF₂ in LiF-NaF-KF eutectic and struct. 4=14170
 Np(IV) hexahalides, electron transfer and 5f \rightarrow 6f
 transitions 4=5186
 O liquid, absorption bands rel. to pressure (to 7000 atm),
 temp. (78°-300°K) and density 3=1692

Spectra—contd

inorganic liquids and solutions—contd

- O₂, dissolved, emission spectrum, ligand-field splitting of antibonding orbitals 4=20058
 O₂ in liq. Ar and N₂, vac. u.v. absorpt. spectra 4=16116
 O₂F₂, absorption spectra, molar extinction coeffs. 1=15886
 O₃, absorption spectra, molar extinction coeffs. 1=15886
 O₃F₂, absorption spectra, molar extinction coeffs. 1=15886
 POCl₃, i.r. absorpt. intensity of symmetrical vibrations, effect of O¹⁸ 4=25680
 Pb salt solns. with excess Br⁻ and Cl⁻, temp. depend. 2=7220
 PbCl₂ 2=15599
 Pr(III) aqua ions absorption bands, with sulphate ligands 4=2685
 Pr³⁺, 0.35 to 2.6 μ 3=9462
 Pu (IV) hexahalides, electron transfer and 5f → 6f transitions 4=5186
 S, absorpt. and i.r. emission spectra 4=15600
 S²⁻ and HS⁻ solns., u.v. absorpt. spectra 4=16117
 Se, absorpt. and i.r. emission spectra 4=15600
 SiO₂, infrared reflection 1=11379
 Sm(III) aqua ions absorption bands, with sulphate ligands 4=2685
 Sm³⁺, 0.35 to 2.6 μ 3=9462
 Sn²⁺, ⁴⁺ halides, absorption, mechanism 2=17468
 SnCl₂ 2=15599
 Tb(III) aqua ions absorption bands, with sulphate ligands 4=2685
 TeO₄²⁻, i.r. spectrum giving structure 4=26213
 Tl salt solns., with excess Br⁻ and Cl⁻, temp. depend. 2=7220
 Tl⁺, ³⁺ halides, absorption, mechanism 2=17468
 TlBr 2=15599
 TlCl—alkali chloride, aq., absorpt. spectra 2=21911
 U (IV) hexa-halides, electron transfer and 5f → 6f transitions 4=5186
 V, absorption in aqueous solution, crystal-field theory 1=8122
 Yb(III) aqua ions absorption bands, with sulphate ligands 4=2685
 ZnCl₂ fused mixtures with LiCl and KCl 4=183

inorganic solids

- absorption bands, of defect electrons 1=2397
 absorption, β-band, rel. to electron transitions, theory 4=9882
 absorption edge of anisotropic crystals, fine structure 1=19983
 absorption edge, correlation with luminescent edge 1=17906
 absorption edge, rel. to defect fields 3=13161
 absorption, of impurity centres, band structure, quantum mech. model 1=14625
 absorption, position of edge, determination 1=18594
 actinide 4+ ions, rel. to crystal-field parameters 4=28316
 alexandrite, absorption, temp. depend. 0=16061
 alkali-earth metal oxides, absorption edge relationship with lattice energy 1=3836
 alkali fluoberyllates, vibr. i.r. absorpt., BeF₄²⁻ ion 4=10161
 alkali halide phosphors, explanation 3=23100
 alkali halides, absorption, rel. to colour centre energy levels 2=23212
 alkali halides, absorption, phonon and zero-phonon lines 4=22843
 alkali halides, absorption, analysis, rel. to exciton structure 1=945
 alkali halides, absorption, rel. to F₂⁺-centres 1=14597
 alkali halides, Ag ions, oscillator strength 3=10965
 alkali halides, α and γ bands, exciton model 3=20467
 alkali halides, colour centres, effect of pressure 0=9906
 alkali halides containing U-centre, u.v. region 4=4226
 alkali halide crystals, effective ionic charge from long-wavelength optical mode frequencies 1=2363
 alkali halide crystals, effective ionic charge from long-wavelength optical mode frequencies 1=6241
 alkali halides, CsCl-type, colour centres 2=6384
 alkali halides, effect of quartic anharmonicity 2=8532
 alkali halides, exciton absorption spectra 0=6036
 alkali halides, extinction bands, correl. with plasma resonance 0=7876
 alkali halides, far i.r. 1=18596
 alkali halides, i.r., Born—Huang dispersion theory 1=1168

Spectra—contd

inorganic solids—contd

- alkali halides, isoelectronic, u.v. 2=8521
 alkali halide phosphors, absorption, pressure-effects 1=19984
 alkali halide phosphors, effect of pressure and temp. 1=11364
 alkali halide pressed pellets, effect of hydration 1=7898
 alkali halides, "pure" F-centres, absorption band shapes 2=23214
 alkali halides, secondary absorption spectra 1=7711
 alkali halides, rel. to specific heat 3=754-65
 alkali halides, theory of halogen atom doublet 0=2810
 alkali-halides with U-centres, i.r. absorpt. 3=20247
 alkali halides, U-centres, i.r. spectrum 0=11631
 alkali halides, u.v. absorption at room temp. and 80°K 0=2937
 alkali halides, u.v., and crystal excitons 4=13020
 alkali halides, u.v., electron affinities calc. 2=8146
 alkali halides, vac. u.v. 3=10964
 alkali halides, X-ray irradi., absorption by F₂⁻, Cl₂⁻, Br₂⁻, I₂⁻ 1=3840
 alkali hydrides, fundamental absorpt. bands rel. to U-centre absorpt. 4=17551
 alkali metal azide crystals, i.r. 1=8994
 alkali metal azides, u.v. 2=4143
 alkali nitrates and nitrites, i.r. absorption above and below melting pt. 0=16069
 alkaline earth platocyanides, transitions 2=18817
 amethyst, absorption spectra 2=18800
 anatase, X-ray absorption spectrum 1=7720
 anthracene, meas. and exciton model 3=2970
 anthracene, rel. to molec. vibrations 2=14374
 atomic energy levels in crystals 1=14148
 azide ion in alkali-halide lattices, i.r. 2=21250
 benzene, near u.v. absorption below -259°C 2=8525
 beryl, Fe³⁺ absorption 0=16169
 beryls, Fe-coloured, absorption, 290° to 1.7°K 3=3001
 α-brasses, absorption, 0.23-4.0 μ, at 4.2°K 0=1542
 calcite, i.r. absorption, rel. to dolomite and magnesite, theory 1=17896
 calcite, neutron irradi., magnetic centres 1=14791
 calcium aluminates, hydrated, i.r., and H₂O behaviour 3=13165
 chars of model cpds., i.r. spectra 4=4722
 chromia-alumina powders, reflection 4=7124
 cobaltous salts, hydrated, absorption band structure 0=16052
 colour centres, LiF, line and band 3=6540
 complex salts, line spectra 2=577
 complex salts, theory 2=576
 complexes of Cu²⁺, Co³⁺ and Fe²⁺, effect of pressure 1=12490
 corundum, i.r. lattice vibr. analysis 4=4256
 corundum, rel. to ligand field for Cr³⁺ ions 2=10298
 corundum, Mn-activated 1=10105
 corundum, transition metal ions 2=14677
 crystal excitons, and photoconductivity, luminescence 3=22689
 crystal impurity centres, when Condon's approx. is not valid 3=20458
 crystals, additional light waves in exciton absorption region 3=10913
 crystals containing Fe³⁺, down to 1.7°K 3=15681
 crystals; exciton absorption in elec. fld., theory 3=10937
 crystals, isotopically disordered, absorption 1=7527-8
 crystals, perturbed exciton 3=10932
 crystals with rare-earth ions, absorption spectra 3=12350
 crystals with strong hydrogen bonds, i.r. bands 1=11377
 crystals, with trigonal and rhombic symmetric fields, d³-term splitting 1=3620
 cubic crystals, deformed, band-splitting 1=17879
 cubic crystals, effect of compression on optical absorption 1=16121
 cubic crystals, quadrupole exciton absorption 1=17875
 cubic diamond-type, derivation from structure theory 3=10618
 cuprite, green and yellow series as exciton spectra 3=25455
 d³ ions in trigonal crystal fields 4=7096
 d⁵ configuration in cubic crystalline fields 4=25827
 danburite, i.r. spectra 1=8995
 diamond, absorption, phonon effects 2=14688

Spectra—contd

inorganic solids—contd

- diamond, composite class 2=8501
 diamond, hot semiconducting, i. r. absorption 2=23382
 diamond, i. r. absorption, rel. to free vibr. 2=8497-8506
 diamond, i. r. absorption, rel. to lattice vibrations 3=10577
 diamond, i. r., interpretation 1=1169
 diamond, i. r., review, Raman's work 3=23069
 diamond, intrinsic edge absorption 4=10172
 diamond, strong absorption bands in u. v. 0=4417
 diamond synthetic, i. r., 500-3500 cm^{-1} 2=4148
 diamond, 3000-7000 Å absorption 0=16053
 diamond, two-phonon i. r. absorption 1=19995
 diamond, type I, i. r. absorption 3=10928
 diamond, type I, i. r. and u. v. absorption due to N impurities 0=652
 diamond, type II, absorption rel. to electron irradiation 2=23558
 diamond, type IIb, absorption, optical phonon effects 3=10933
 diamond, u. v. absorption and reflection 2=16831
 diamond, u. v. and i. r. 1=888
 diamond, u. v. reflection meas. 4=13033
 diamonds, i. r. absorption 1=8992
 diamonds, i. r. absorption, effect of neutron irradiation 1=6211
 diamonds, i. r. at large dispersion, temp. depend. 1=1170
 diamonds, i. r., vibr. freqs. 3=18003
 diamonds, irradiation, n, e, γ , thermal annealing, review 4=1729
 diamonds, natural and synthetic, i. r. absorpt., 6 band groups 4=7129
 diamonds, synthetic, types I and II 3=8595
 dichromates, electronic absorpt. spectra, interpret. 3=4837
 dielectrics, i. r., rel. to lattice vibr. "centro-freq." 4=28349
 dielectrics, u. v., separation of exciton and scatt. struct. 4=22826
 diimide (N_2H_2), i. r. 4=28214
 dolomite, i. r. absorption, rel. to calcite and magnesite, theory 1=17896
 electrocorundum, absorption, rel. to colour centres 3=15515
 emerald, absorption, temp. depend. 0=16061
 exciton absorption bands, theory of line-shapes 0=11608
 exciton absorption in crystals, effect of deformation and mag. field 2=10598
 exciton absorption bands, line shape theory 2=8192
 exciton absorption lines rel. to crystal size 4=4245
 exciton absorption, phonon coupling, interband effect 4=13007
 exciton absorption, quadrupole lines rel. to electric field 2=4140, 8513
 exciton-lattice interaction, line shape of exciton absorption band 0=13508
 exciton lines, effect of formation and decay 2=8191
 exciton lines, enhancement in elec. field 2=10594
 ferric iron-containing oxides, absorption 2=6569
 ferrites, optical and infrared 1=6208
 films, AB_2 form, absorption meas. 4=2085
 fluorides, u. v. absorpt., oscillator strength for first band 4=7131
 fluorite 3=8458
 frustrated total internal reflection, surface study 0=10030
 fundamental edge, shift by elec. fields 1=17880
 fund. edge shift, use in elec. field distrib. study 1=17860
 garnets, optical and infrared 1=6208
 gases, condensed, at low temps., review 3=10929
 glass, alkali-silicate of high u. v. transmission, absorpt. spectra of cations 4=7111
 glass, CdS- and CdSe-coloured, absorption 2=18820
 glass, Na borate and silicate, u. v. absorpt., composition and temp. effects 3=13173
 glass, Nd^{3+} doped, absorpt. spectra 4=13037
 glass, Pb silicate, γ -irradiated, absorption 1=17886
 glass, phosphate, rel. to colour centres 1=19809
 glass, phosphate, rel. to colour centres 2=8259
 glass, Si 104, irradiated 1=19070
 glasses, absorpt. bands, and halogen ion, di formation by u. v., X-rays 4=4707
 glasses, based on Tl, As and Sb chalcogenides, absorption spectra 0=13609
 glasses, titaniferous, rel. to coord. state 3=25459

Spectra—contd

inorganic solids—contd

- graphite, reflection spectra 0=11760
 graphite, spectral line intensity, carrier effect 4=26224
 guanidine Al sulphate hexahydrate, Cr^{3+} absorption spectrum 3=936
 guanidine sulphate, rel. to H_2O molecular vibrations 2=14681
 heavy transition metal hexahalide complexes, effect of pressure 1=11367
 heavy metal halides, absorption edge, pressure depend. 0=4406
 howlith, i. r. spectra 1=8995
 hydroxides, near i. r. complexity, rel. to lattice-internal mode combination 4=6702
 i. r. absorption lines, rel. to temperature and intermolecular vibrations 3=15662
 i. r. absorption at longit. optic freqn. 3=15663
 i. r., second order effects and finite number of vibr. modes 4=7099
 ice, crystals, i. r., H positions 0=10044
 ice, dense forms 0=6178
 ice, far i. r., vitreous, cubic, hexagonal forms 4=13040
 ice, Ih and Ic, i. r. 4=17568
 ice, molecular potentials 0=13694
 ice, reported new form actually $\text{NaCl} \cdot 2\text{H}_2\text{O}$ 2=16834
 ice, II, III and V, i. r. 4=17569
 impurities in insulators, dynamic perturbations effects 4=28348
 impurities, multiplet transitions, vibr. structure 4=17546
 impurities, narrow "no-phonon" lines, theory 4=10150
 impurities, singlet spectra, vibration structure theory 4=13006
 impurity absorption bands, vibr. structure 3=8587
 impurity absorption near exciton bands, theory 3=17993
 impurity atom effects on vibrational absorption spectrum 1=10098
 impurity centres, effect of lattice anharmonicity 4=28452
 impurity zero phonon line broadening 4=30689
 Inconel, oxidized, heated to 1000°C, spectral emittance 4=14443
 inert gases, solid, u. v. line shape 2=16826-7
 inert gases, u. v. absorption line shape 1=11362
 inert gases, u. v., and crystal excitons 4=13020
 ionic crystals, colour centres 4=28496
 ionic crystals, exciton spectra 0=16048
 ionic crystals, i. r. absorption, departures from approx. theory, rel. to dielec. const. 0=1364
 ionic crystals, i. r. band shape, quantum-mechanical model 2=2236
 ionic crystals, luminescence and absorption spectra 1=2452
 ionic crystals, optical lattice absorption and reflection 4=22842
 ionic crystals, u. v. absorpt., interpret. 3=929
 ionic crystals, u. v. absorption, change on melting 0=10038
 ionic crystals, u. v. changes on melting 2=16822
 Irtran-1 3=20480
 lanthanides (III) in ThO_2 , reflection meas. 4=20462
 lattice particles, rel. to Bethe's electron levels 2=6302
 lattice vibration spectra, centre law 0=16050
 M-centres, absorption, macroscopic approx. 1=1154
 magnetic crystals, absorption, 10^4 - 10^5 cm^{-1} 0=10036
 magnesite, i. r. absorption, rel. to calcite and dolomite, theory 1=17896
 metal films, plasma reson. due to fast electron 3=8407
 metal halides, far i. r. spectra 4=7117
 metallic oxides, chromates, phosphates, i. r. 2=6578
 metallic oxides, reflection, 300-1000 $\text{m}\mu$ 3=13154
 metals, absorption, rel. to characteristic losses of fast electrons 1=6099
 mica, heat effects, muscovite sheet 4=10181
 mica, i. r. reflection spectra, residual lines, props. 4=17576
 micas, i. r. spectra and its depend. on crystal orientation 4=15594
 micas, muscovite, 0.3-16 μ , classification 3=25463
 mixed crystals, contg. Ag, exciton absorption, Cu_2O -type 1=3637
 Mössbauer analogue, impurity electronic trans. 4=20442
 muscovite, vibrations of OH ions 3=13164
 nitrate ions in solid alkali halides, i. r. absorption 1=7714

Spectra — contd

inorganic solids — contd

- nitrates, i.r., lattice freqn. and rotational barriers 3=746
 nitrates, nitrites, melting, u. v., and ion surrounding shell changes 4=5451
 nitrates, nitrites, u. v. and phase transformations, crystal 4=7509
 octahedral crystal fields, with Cr^{3+} 3=25454
 olivine, absorption edge, temp. and press. depend. 0=8798
 one-dimensional ionic lattices, i.r. absorption, calc. 1=19992
 I—VII, II—VII, and III—V cpds., absorption edges, pressure effects 1=8986
 paramagnetic, atomic interaction splitting 4=22824
 paramagnetic ions, linewidth, effect of strains 2=12602
 paramagnetic ions, optical pumping 0=18121
 phosphates, 7, i. r., selection rules 4=13059
 polar crystals, absorption of linear anharmonic chain 0=18122
 pressure effect, octahedral complexes of Ni^{2+} , Co^{3+} , Mn^{2+} 1=17888
 quartz, artificial, Brillouin scattering 0=11763
 quartz, extinction bands, correl. with plasma resonance 0=7876
 α -quartz, with Ge impurities, absorption, rel. to X-irrad. 3=22832
 quartz glasses, $\lambda = 150\text{--}275\mu$, absorption 2=7341
 α -quartz, i.r. absorpt., rel. to H^+ incorporation 2=21009
 quartz, i.r. absorption, due to defects 0=16070
 quartz, i.r. absorption, 3μ region 0=4416, 18128
 quartz, i.r., rel. to coordination 4=1744
 quartz, i.r., effect of electrolysis, heat treatment, and n-irrad. 1=3847
 quartz, i.r., H-containing defects 2=6320
 α -quartz, i.r. lattice bands 1=3845
 quartz, irradiated, u.v. absorption 1=7708
 quartz, with Na and Li impurity ions, X-irrad., absorption bands 0=18154
 quartz, plates, natural, far i. r. absorption 4=10207
 quartz, smoky, heat treatment effects 4=1742
 quartz, synthetic, i.r. absorption due to OH defects 0=11764
 quartz, visible absorption band 0=18135
 Raman scattering tensor for vibrations of any class of crystal 1=14613
 rare-earth chlorides, i.r. absorption 2=6577
 rare earth cpds. (24), absorption 3=11038
 rare earth elements, complex spectra, term analysis technique 0=16853
 rare-earth ions, absorption intensities, calc. 2=18421
 rare earth ions in crystals, effect of pressure 1=3832
 rare-earth ions in crystals, hyperfine interacts., theory 2=21295
 rare-earth ions in crystals, intensities 2=18831
 rare-earth ions (divalent), in cubic crystals 4=7153
 rare earth ions, divalent, in cubic crystals 4=20465
 rare-earth ions, rel. to spontaneous phonon emission 2=12591
 rare-earth iron garnets, far i. r. absorption 3=8597
 rare-earth iron garnets, low-lying spectrum, theory 1=14611
 rare-earth nitrides, absorption edges rel. to semiconducting props. 4=20376
 rare earth salts, absorption, rel. to ionic energy levels 4=25823
 rare earth trivalent ions rel. to laser material suitability 4=19296
 reflection bands, rel. to nature of incident light 3=9600
 refractory materials heated to 1000°C , spectral emittance 4=14443
 rock salts; i.r. activity rel. to sp. ht. calc. 2=6259
 rocksalt-type crystals, absorption spectra detail 0=20976
 ruby, $^4\text{A}_2 \rightarrow ^2\text{F}_1$ transition, identification of components 3=3015
 ruby, absorpt., B_1 and B_2 lines Zeeman effect 2=10599
 ruby, absorption 4=15596
 ruby, absorption, ground and excited states 4=15596
 ruby, absorption R lines 4=20468
 ruby, absorption spectrum, theory 4=22885
 ruby, absorption, temp. depend. 0=16061
 ruby, absorption, U and Y bands, analysis 4=20467
 ruby, B and R absorption lines, Zeeman effect 4=4271

 AgI films, exciton bands 1=17892
 Al films, i.r. reflectance 2=23537
 Al, oxide anodic films, i.r. absorpt. 4=23566
 AlLaO₃, La³⁺ replaced by Nd³⁺, Al³⁺ by Cr³⁺ 3=15670

Spectra—contd

inorganic solids—contd

- Al₂O₃, α -phase, vibrationa, 2-200 μ 2=21252
 Al₂O₃ films, far i.r. transmission and reflection 2=4153
 Al₂O₃ heated to 1000°C, spectral emittance 4=14443
 Al₂O₃, Ni centres, i.r. 2=16830
 Al₂O₃, ruby, Cr³⁺ line optical spectrum 0=20978
 Al₂O₃, sapphire, colour centre decay, light vs. γ -irradiation and untreated 4=30696
 Al₂O₃—Cr₂O₃ mixtures, optical absorpt. 2=15022
 Al₂O₃—Cr₂O₃, Cr content analysis 2=862
 Al₂O₃—Cr₂O₃, Cr³⁺ coloured crystals, absorption 0=4410
 α -Al₂O₃:Mn²⁺ 2=14712
 Al₂O₃:V, 0.4-1.2 μ 0=20991
 Al(OH)₃, i.r. 1=1171
 Al₂(SO₄)₃.6H₂O, rel. to H₂O molecular vibrations 2=14681
 AlSb, absorption edge, pressure effects, to 140 kbars 1=8986
 AlSb, i.r. lattice bands 2=16838
 AlSb, n-type, absorption, 0.7-38 μ 0=6184
 AlSb—GaSb alloys 0=12079
 AlVO₄ glass, i.r., and structure 4=10626
 Am³⁺ in LaCl₃ 2=2232
 Am³⁺(5f⁶) in LaCl₃ 1=19991
 Ar films, and Xe impurity states, 10°K 4=1721
 Ar, u.v. absorpt., 20°-50°K meas. 3=2998
 As, in Si, absorption 2=23557
 As₂O₃, absorption in Schumann u.v. region 1=17893
 As₂S₃, long-wavelength edge absorption 4=17553
 As₂S₃, reflection, u.v., maxima 4=7109
 As₂S₃—As₂Se₃ glasses, i.r. absorption rel. to composition 2=18845
 As₂Se₃, absorption in films 2=18692
 As₂Se₃-type glasses, far i.r. 3=10930-1
 Au, i.r. absorption 1=3844
 Au (III) tetrahalo complexes, charge transfer spectra 2=4244
 Au—Ni thin films, i.r. absorpt. 3=8580
 B, in Si, compensated, i.r., vibr. absorpt. 4=4274
 B in Si, i.r. absorpt. impurity lines, width and temp. depend. 4=28673
 BaSO₄, AlAsO₄ glass, i.r., and structure 4=10626
 BCl₃, i.r. spectrum 1=7713
 BF₃, i.r., at 83°K 0=2940
 BF₃—B₂O₃, i.r. absorption spectrum 4=22847
 B₂F₄, i.r. spectrum 4=21187
 BN heated to 1000°C, spectral emittance 4=14443
 B₂O₃, glassy, i.r. absorption 1=5346
 B₂O₃, infrared reflection 1=11379
 B₂O₃, vitreous, i.r. spectra, interpretation 4=7112
 BPO₄, AlPO₄ glass, i.r., and structure 4=10626
 BVO₄ glass, i.r., and structure 4=10626
 Ba nitrate, i.r. absorpt. 2=6580
 BaAl₂O₄, i.r. absorption 2=2239
 BaF₂, coloration, rel. to Mollwo relation 3=2837
 BaF₂ doped with Sm²⁺, absorpt. spectrum 4=17582
 BaF₂, Er³⁺ absorption 3=3000
 BaF₂, Yb³⁺ absorption 3=3000
 BaF₂:Ho,Er, absorption of Ho²⁺ and Er²⁺ 4=13038
 BaF₂:Sm²⁺, spectra analysis 2=14717
 BaF₂:Sm²⁺, vibronic, model rel. to transitions away from k = 0 4=13085
 BaN₃, u.v. absorption meas. 3=25450
 Ba (NO₃)₂, i.r., overtone and combination bands, rel. to NO₃⁻ vibrations 4=10163
 BaO films, absorption bands 2=16818
 Ba(OH)₂, octahydrated, i.r. 1=1171
 BaO—TiO₂—P₂O₅, u.v. absorption 0=11773
 BaTiO₃, absorption 2=2224
 BaTiO₃, BaTiO₃(75%)SrTiO₃(30%), i.r., 670-15 cm⁻¹, absorpt. 3=23064
 BaTiO₃, effect of added Co 4=30807
 BaTiO₃, i.r. absorption 2=14682
 BaTiO₃, i.r., rel. to lattice dynamics 2=20918
 BaTiO₃, oscill., 45°-140°C, rel. to dielec. permeability 4=30677
 BaTiO₃, i.r. reflection, 2-1000 μ , 45° to 140°C 4=1722
 Be, K-emission band meas. 3=8605
 BeO, absorption in Schumann u.v. region 1=17893
 Bi, absorption bands in 3-36 μ spectral region 1=5812
 Bi, far i.r., zero-field and magneto-optical studies 1=1147

Spectra—contd

inorganic solids—contd

- Bi, far u.v. absorpt. edge, assignment to d-band transitions 4=15446
 Bi halides, in pressed alkali halide disks 0=8001
 Bi₂O₃, absorption in Schumann u.v. region 1=17893
 Bi₂Te₃, i.r. absorption by free carriers 1=1146
 Br₂ mol. crystals, far i.r., at 77°K 4=20445
 CBr₄, vibration spectra 3=15677
 (CH₃)₄N₂Cr₂O₇, electronic absorpt. spectrum 3=15671
 C₂N₂¹⁶, polycrystalline, i. r. spectrum, intermolecular coupling 4=28211
 CO, i.r. 1=14600
 CO, i.r. 3=1693
 CO, i.r., as solid and in solid matrices 1=14601
 CO, 1-0, 2-0, 3-0 bands 3=17572
 CO, in solid N₂ and Ar, O-2 transition 4=25638
 CO₂ molec. crystals, far i.r. spectra 4=20446
 COS molec. crystals, far i.r. spectra 4=20446
 CS₂, absorption bands 3=17999
 CS₂, i. r., absorption 4=10202
 Ca fluorophosphate, Mn²⁺ absorpt. 3=13168
 Ca halophosphates, colour centres meas. 4=22626
 Ca halophosphate phosphors, excitation and absorption 1=6200
 CaAl₂O₄, i.r. absorption 2=2239
 CaBr₂, impurities, crystals and frozen solutions 4=1733
 CaCO₃, calcite, crystal field effects 0=524
 CaF₂, colouration, rel. to Mollwo relation 3=2837
 CaF₂, coloured monocystals 1=14329
 CaF₂, dispersion meas. in far i.r. 2=8537
 CaF₂ doped with Sm²⁺, absorpt. spectrum 4=17582
 CaF₂, Er²⁺ absorption 3=3000
 CaF₂, i.r. absorption 0=10040
 CaF₂, optical, "piezospectroscopic" effects 2=23559
 CaF₂, pure and doped, coloured by electrons at 2.5 MeV 0=20836-7
 CaF₂, synthetic and natural 0=11759
 CaF₂, Yb³⁺ absorption 0=11938
 CaF₂, Yb²⁺ absorption 3=3000
 CaF₂, Y-doped, coloured by X-rays 3=8593
 CaF₂:Eu³⁺, line luminescence 0=9909
 CaF₂(Eu²⁺), Zeeman and uniaxial stress spectra 3=10943
 CaF₂:Ho, absorption, rel. to impurity ion behaviour 3=8710
 CaF₂:Ho,Er, absorption of Ho²⁺ and Er²⁺ 4=13038
 CaF₂:Nd³⁺ 3=13167
 CaF₂:Sm, rel. to colour centres and laser action 2=12589
 CaF₂:Sm, 200-800 mμ, rel. to radiations effects on Sm³⁺ 2=12597
 CaF₂:Sm²⁺, absorption, Zeeman effect 3=18026
 CaF₂:Sm²⁺, spectra analysis 2=14717
 CaF₂:Sm³⁺, line luminescence 0=9909
 CaF₂:Tm²⁺, energy-level scheme 2=18833
 CaF₂:Tm²⁺, Zeeman effect of 1.116μ line 4=26183
 CaF₂:U³⁺, absorption and emission, 2.1 to 2.5 microns 4=7113
 CaF₂:U⁴⁺, rel. to e. s. r. 2=23870
 CaF₂:Y²⁺(4d¹) 3=15516
 CaF₂:Yb³⁺, absorption, high-resolution study 2=16828
 CaF₂:Zn²⁺Si₂O₆, i.r. absorption spectra 1=14610
 CaI₂, crystalline films 4=2065
 CaI₂, impurities, crystals and frozen solutions 4=1733
 CaMgSi₂O₆, i.r. absorption spectra 1=14610
 CaMoO₄, i.r. reflection, lattice vibr. 4=25841
 CaMoO₄, Tm³⁺ and Ho³⁺, energy transfer from Er³⁺ 4=7180
 CaO, after neutron irradi. 3=13169
 CaO, 14.5 μ-200 mμ absorption meas. 4=7120
 Ca(OH)₂, i.r. 1=1171
 Ca(OH)₂, lattice vib. spectra 4=3973
 CaSO₄·2H₂O, reflection, vibration states 3=23038
 CaTiO₃, i.r. reflection and transmission 4=26184
 CaWO₄, i.r. reflection, lattice vibr. 4=25841
 CaWO₄:Er³⁺ 2=23546
 Cd films, u.v. absorption 3=11318
 CdF₂, free-carrier effects 2=14551
 CdF₂, single crystals, before and after X-irradiation 0=2823
 CdF₂ single crystals, pure and rare-earth doped, 0.2-15 μ 3=3003
 CdF₂:Ce, ²F_{7/2} ← ²F_{5/2} transition of Ce³⁺ 0=13698
 CdF₂:Eu³⁺, rel. to Eu crystal states 2=10588

Spectra—contd

inorganic solids—contd

- CdF₂:Nd, i.r. absorption 0=13698
 CdF₂:Pr, i.r. absorption 0=13698
 Cd_xHg_{1-x}Te solid solution, i.r. absorption, rel. to composition 3=17997
 CdI₂ and CdI₂·PbI₂, absorption in vis. and near u.v. region 0=10037
 CdI₂, crystalline films 4=2065
 CdIn₂Te₄, transmission, 0.75-2.5 μ meas. 4=7121
 CdO films, doped and undoped 3=25359
 CdO, i.r. absorption 0=11752
 CdS(Ag) emission bands 1=19978
 CdS, absorpt. bands, dispersion shift 2=23565
 CdS, absorption edge, press. depend. 0=4408
 CdS, absorption edge, pressure effects, to 140 kbars 1=8986
 CdS, absorption edge shift, field-induced 4=13024
 CdS, absorption edge, temp. depend. 0=10039
 CdS, absorption, at low temps., mechanical working depend 0=18123
 CdS, absorption, 1-24 μ, meas. and theory 4=13025
 CdS, absorption, with polarized light and green-edge emission, rel. to pressure, 77°K 3=931
 CdS, absorption, 20°K 2=23543
 CdS, bound exciton complexes, props. 3=6651
 CdS crystal excitons 3=22689
 CdS crystals at low temp., effect of mechanical treatment 2=6571
 CdS, deformed, absorption bands, position 2=18847
 CdS, dispersion and exciton absorption band 3=18000
 CdS, exciton absorption 2=12596, 14671
 CdS, exciton lines, effect of formation and decay 2=8191
 CdS, exciton spectrum, fine structure and magneto-optical effects 1=7559
 CdS, films, absorption spectrum 1=14588
 CdS, films, absorption spectrum 1=17882
 CdS, fine structure of photoconductivity spectra 0=7955
 CdS, fund. absorption edge, shift by elec. fields 1=17880
 CdS, rel. to field emission spectrum 3=16972
 CdS, i.r. absorption of ion impurities 1=11380
 CdS, i.r. absorption, polarization effects 2=8533
 CdS i.r. emittance rel. to absorption processes, 323° to 473°K 3=10961
 CdS, large crystals, rel. to defects 3=17704
 CdS layers, band in absorption spectrum 1=3837
 CdS, layers, fundamental absorption edge 1=3842
 CdS layers, 0.4-18 μ, impurity effects 3=20469
 CdS, mag. field effect on exciton absorption 1=19971
 CdS, magneto-optic absorption 2=23527
 CdS, multiphonon i.r. absorption 4=7116
 CdS, optical absorption, 4-2°K, and excitons 3=8594
 CdS, optical observation of exciton 4=1441
 CdS, optically active phonon processes 4=17560
 CdS, phonon peaks in i.r. absorption 3=10947
 CdS, polarized reflection, at 4.2 and 77°K, exciton spectrum 0=2943
 CdS, polycrystalline films, reflection, effect of substrate heat-treatment 2=4134
 CdS polycrystals, visible absorption, effect of temp. 2=4132-4
 CdS, reflection, dispersion effect 3=15652
 CdS, reflection peaks near exciton line 4=1705
 CdS, reflection spectrum 0=6185
 CdS, reflection, of wurtzite structure 3=8583
 CdS, review 1=2436
 CdS, sharp lines rel. to bound excitons 3=10630
 CdS, at 20°K and 1750 atm 2=7094
 CdS type crystals, transmission, i.r. 2=21253
 CdS, u.v. refl., polarization effects 4=4279
 CdS, u.v. reflection spectrum 4=26180
 CdS, zincblende-type, absorpt. band edge, thermal depend. 4=17557
 CdS_xCdSe_{1-x} mixed crystals, fine structure 2=6552, 10596
 CdS_xCdSe_{1-x}, 20°K 1=1104
 CdS_xZnS_{1-x} mixed crystals, fine structure 2=6552, 10596
 CdSb, absorption, rel. to band structure 3=10811
 CdSb, absorption, temp. variation 2=4033
 CdSb, i.r. absorption, pleochroism 3=923
 CdSb, i.r. absorption with polarized radiation 2=23415
 CdSb, transmission to beyond 30 μ 2=23373
 CdSe, abs. and reflection, at 77° and 4°K 0=13692

Spectra—contd

inorganic solids—contd

- CdSe, absorption edge, pressure effects, to 140 kbars 1=8986
 CdSe, absorption, exciton structure interpretation 4=20248
 CdSe, doped with Ga, Burstein effect 3=915
 CdSe, exciton line and lattice defects 3=6652
 CdSe, excitons, Zeeman effects rel. to structure 2=10359
 CdSe films 0=18113
 CdSe, reflection and absorption, Zeeman structure 1=17474
 CdSe, reflection, of wurtzite structure 3=8583
 CdSnAs₂, i.r. absorption 1=17723
 CdTe, absorption 2=14679
 CdTe, absorption edge, pressure effects, to 140 kbars 1=8986
 CdTe, absorption, rel. to acceptor states 4=4145
 CdTe, fundamental reflectivity 3=17979
 CdTe, reflection, 20-400 μ , 90°-300°K 1=14578
 CeMg nitrate, far i.r. meas. 4=4254
 CeZn nitrate, far i.r. meas. 4=4254
 Cf³⁺(5f⁹) in LaCl₃ 2=2248
 Cl₂ mol. crystals, far i.r., at 77°K 4=20445
 Cl₂O₇, i.r. absorption 2=16527
 Co-doped oxides 2=4142
 CoBr₂, absorption, crystal-field spectra of d³, d⁷ ions 3=25453
 CoBr₂·6H₂O, low temp. optical absorption 0=16051
 [Co(CN)₆]³⁻ stretching vibrations in KCl and NaCl 2=8516
 CoCl₂, absorption, crystal-field spectra of d³, d⁷ ions 3=25453
 CoCl₂·6H₂O, low temp. optical absorption 0=16051
 CoCl₄²⁻ in crystalline environments 3=20472
 CoF₂, antiferromagnetic resonance in far i.r. 3=15930
 CoF₂, i.r. absorption, effect of antiferromag. ordering 3=15673
 CoFe₈³⁺, in various salts, electron (d-d) absorption, Jahn-Teller effects 1=3831
 [Co(NH₃)₆]Cl₃, absorption, ligand field bands 2=18825
 CoO, optical absorption, above and below Neel temp. 0=1725
 CoO, 200-1000 m μ 0=20977
 Co(II) cpds. 0=4413-14
 Co(III) hexammine salts 2=8514
 CoSO₄·7H₂O, i.r. absorption, 350-4000 cm⁻¹ 4=22880
 CoSO₄·7H₂O, SO₄²⁻ ion bands 2=4155
 CoWO₄, absorption, crystal-field spectra of d³, d⁷ ions 3=25453
 Co²⁺ in KCl crystals, optical absorpt. spectrum, crystalline field theory 4=7128
 Co²⁺ in LiF and KMgF₃ 3=20043
 Co²⁺ salts, i.r. absorption from L.S. splittings 0=1732
 Co²⁺ in sulphate media 2=17463
 Co²⁺ in tetrahedral sites in crystals 2=14673
 Cr cpds., X-ray emission, chemical-bond effects 3=23086
 Cr ions in crystals, fine lines 2=4141
 Cr, transmission in vac. u.v. plasma freq. and M₂, band 0=20981
 Cr²⁺, in chloride and sulphate hydrates 3=23066
 Cr(III) complexes in rigid glass, meas. 4=22920
 Cr³⁺, in crystals and glasses, absorption bands 0=10041
 Cr³⁺ ions in crystals, molecular orbital theory 3=13163
 Cr³⁺, in ruby 0=20979
 CrBr₃, absorption, rel. to mag. props. 3=15656
 Cr in K₃CrO₈ and K₃NbO₈-K₃CrO₈ 3=3166
 Cr₂O₃, Cr³⁺ lines, exchange splitting 3=15672
 CrO₂, vibrational spectrum 4=10169
 CrO₃, vibrational spectrum 4=10169
 Cr₂O₃ and ruby, comparison of crystal fields 3=15675
 Cr₂O₃, solid soln. in In₂O₃ 2=21248
 Cr₂O₃, vibrational spectrum 4=10169
 Cr₂(SO₄)₃·nH₂O, i.r. absorption, hydration study 1=17897
 CsBr, colloid absorpt. band at 1050 m μ 3=25451
 CsBr, dispersion meas. in far i.r. 2=8537
 CsBr, F-band structure 0=7894
 Cs₂CoCl₆, no i.r. absorption from L.S. splittings 0=1732
 CsF, absorption, after X-irradiation, 295, 80, 18°K 3=15676
 CsF, F band peak energy calc. 4=30586
 CsF, i.r. lattice refl., Kramers-Kronig analysis 4=1737
 CsI 2=2249

DBr molecular crystals, far i.r., at 77°K 4=20444
DCl molecular crystals, far i.r., at 77°K 4=20444
Dy chloride and nitrate, absorption, 58 and 4.2°K 0=16054
Dy salts, i.r. 2=4156
DyCl₃, hexagonal 1=19974
Er chloride, u.v. absorpt., Er^{3+} ion energy levels 2=14680
Er ethyl sulphate, u.v. absorpt., Er^{3+} ion energy levels 2=14680
Er ferrite, absorption, (15400 cm^{-1}), 4°-293°K 1=10100
Er ferrite garnet, absorption, near i.r. 3=20475
Er, visible, rel. to 4f shell transitions 3=13182
 Er^{3+} 0=6179
 Er^{3+} in YGa garnet, rel. to crystal potential 3=13172
 Er^{3+} in CaF_2 matrix, absorpt. and emission 4=20454
 Er^{3+} in crystalline salts 1=10099
 Er^{3+} in LaCl_3 , orbital calc. 4=4259
 Er^{3+} in LaF_3 , u.v. absorption 4=28684
 Er^{3+} in Y_2O_3 , single crystals, absorpt. spectrum 4=22856
 ErCl_3 , absorption 2=14678
 ErCl_3 1=12493
 $\text{ErCl}_3 \cdot 6\text{H}_2\text{O}$, spectra and Zeeman effect at low temps. 1=1165
 $(\text{Er}, \text{Gd})_2\text{O}_3$, visible, term analysis, 20°K and 90°K 2=10606
 $(\text{Er}, \text{La})_2\text{O}_3$, visible, term analysis, at 20°K 2=10605
 $\text{Er}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$, spectra and Zeeman effect at low temps. 1=1165
 $(\text{Er}, \text{Y})_2\text{O}_3$, rel. to Er ions interact. 3=10565
 $(\text{Er}, \text{Y})_2\text{O}_3$, visible, term analysis, 20° and 90°K 2=10606
Eu (trivalent) salts, u.v. absorption 3=10944
 Eu^{2+} in alkali halides, absorpt. and fluoresc. 4=15611
 Eu^{3+} in silicate glasses, and Eu—O interaction 4=10174
 Eu^{2+} and Gd^{3+} in CaF_2 0=18126
 Eu^{3+} in LaCl_3 3=15683
 $\text{EuCl}_3 \cdot 6\text{H}_2\text{O}$, absorption, $^7\text{F}_0 - ^5\text{D}_0$ transition 4=7130
F'-centre absorption, polaron theory 1=14581
F, cryst. at 4°K, absorpt. and fluoresc. 2=18826
Fe oxide glasses, absorption 4=2137
 Fe^{2+} in cubic fields, theory and expts. 0=10228-9
 Fe^{2+} in cubic crystal field, optical spectrum and ground-state splitting 4=20463
 FeAl_2O_4 — MgAl_2O_4 mixed crystals 4=20514
 $\text{Fe}(\text{CO})_5$, far i.r. spectrum 4=26201
 Fe_2O_3 , α -phase, vibrational, 2-200 μ 22=21252
 Fe_2O_3 , absorption, at low-temp. transition 4=4510
 $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$, SO_4^{2-} ion bands 2=4155
 FeSiF_6 , low-temp., rel. to Jahn-Teller effect 2=8522
Ga, oxide anodic films, i.r. absorpt. 4=23566
GaAs, absorpt. edge, var. with compensation, meas. 4=30681
GaAs, absorption 2=14679
GaAs, absorption edge rel. to electric field 1=17729
GaAs, absorption edge, press. depend. 0=4408

inorganic solids—contd

- GaAs, absorption edge rel. to temp. 1=19970
GaAs, absorpt. and recombination spectrum, with view to laser prod. 4=28688
GaAs, emission line narrowing, rel. to exciton binding 3=15659
GaAs, films, absorption 1=20668
GaAs, n and p-type, i.r. absorption edge 4=10175
GaAs, n-type, transmission rel. to irradiation and annealing 2=23387
GaAs, phonon peaks in i.r. absorption 3=10947
GaAs, recombination, effect of doping 3=20476
GaAs, recombination radiations, 77-300°K, diode 3=17990
GaAs, reflection, 2 to 5 eV 3=925
GaAs, reflectance, for 1.5-25 eV photons 3=8584
GaAs, semiconducting diodes, 2·1°K, donor-acceptor absorpt. 3=25458
GaAs, 30-40 μ , lattice absorption bands 1=6212
GaAs—InAs alloy, visible and u.v. reflectivity spectra 4=26190
GaAs, P_{1-x} diodes, emission from junctions 4=7183
GaP, absorption edge, press. depend. 0=4408
GaP, absorption, fine structure 2=10600
GaP, and crystal excitons, bound, 77, 4°K 4=154 62
GaP, effect of high press., rel. to band structure 4=20243
GaP, 8 to 12 μ absorption, rel. to 3-phonon combination bands 3=20085
GaP, emission and absorption near band edge 3=10949
GaP, lines due to excitons bound to defects 3=25253
GaP, 1-4 μ absorption band, origin 0=16055
GaP, p-type, absorption measurements 0=20916
GaP, reflectance, for 1.5-25 eV photons 3=8584
GaP—GaAs, i.r. absorpt., p,n-type material 3=20477-8
GaS absorption, 4° to 300°K, rel. to photon energy 3=10950
GaS, GaSe single crystals, absorption edges, temp. var. 4=28687
GaS i.r., rel. to phonon processes and selection rules 4=28357
GaSb, absorption 2=14679
GaSb, absorption edge, press. depend. 0=4408
GaSb, absorption edge, pressure effects, to 140 kbars 1=8986
GaSb, i.r., effect of carriers 1=17733
GaSb, recombination emission, rel. to exciton and impurity absorption and emission 3=10948
GaSb, reflection, 2 to 5 eV 3=925
GaSb—InSb alloys, i.r. absorption, temp. depend. of optical energy gap 1=18996
GaSb—InSb alloy, visible and u.v. reflectivity spectra 4=26190
GaSe absorption, 4° to 300°K, rel. to photon energy 3=10950
GaSe, films, oriented, exciton, absorpt. reflect., emission 4=1730
GaTe absorption, 4° to 300°K, rel. to photon energy 3=10950
GaTe, optical absorption edge, rel. to temp. 3=3007
 Gd^{3+} in Gd salts rel. to spin-orbit interaction 2=12593
Ge, absorption edge broadening 3=10951
Ge, absorption at $\lambda = 1.3-13 \mu$, temp. depend. 2=10607
Ge, absorption near fund. edge 3=10954
Ge, absorption 1-10 eV 0=8005
Ge, As-doped, heavily, emission and absorption 2=23561
Ge, with As and P donors, (1s \rightarrow np) absorption-band shift and splitting 2=23327
Ge containing O, i.r. absorpt. band, dominant, stress-induced dichroism 4=28485
Ge, direct energy gap, pressure depend. 1=17447
Ge, with dissolved O_2 , 11.7 μ absorption 1=3662
Ge, electron irradiated, i.r. emission, radiative recomb. 0=20984
Ge, effect of phonons 2=14689
Ge, far-i.r., 7.5°K meas 4=26197
Ge, films, absorption and reflection spectra 1=17872
Ge films, 12-60 $\text{m}\mu$, absorption, from 0.4-0.7 μ 3=10953
Ge, free-electron i.r. absorption, 77° to 373°K 3=10925
Ge, frustrated total internal reflection, surface levels 3=2989
Ge, frustrated total internal reflection, surface study 0=10030

Si, free-carrier i.r. absorption, 1.5-30 μ, 80°-550°K 2=23574
 Si, fund. absorption edge, effect of h.f. elec. field 1=19972
 Si, fund. absorption edge, effect of h.f. elec. field 2=4139
 Si, heavily doped, absorpt., energy depend. 4=26198
 Si, i.r. absorpt., rel. to vibr. peaks 4=17346
 Si, i.r. absorption bands (1.8-9.14 μ) neutron or electron irradi. 2=23570
 Si, i.r. absorption of defects, rel. to irradiation 3=23076
 Si, i.r. absorption edge, fine structure 1=6210
 Si, i.r., broadening, due to B doping, mechanisms 3=23080
 Si, i.r., due to free charge carriers 0=16071
 Si i.r. emittance rel. to absorption processes, 323° to 473°K 3=10961
 Si, i.r., interpretation 1=1169
 Si, intrinsic low-temp. emission, theory of intensity maxima 0=9871
 Si, intrinsic absorption, heavy doping effect 3=15688
 Si, irradi., A-centre absorption 1=3657
 Si, n and p doped, i.r. absorption 3=935
 Si, n- and p-type, i.r. absorption rel. to neutron-irradi. 3=3018
 Si, n-type, i.r. absorption, by electron scattering 0=18129
 Si, neutron irradi., i.r. absorpt. spectrum 4=9836
 Si, p-type, neutron irradi., 1-10 μ 0=651
 Si, phonon absorption bands 3=23044
 Si, phonon broadening of impurity lines 4=4276
 Si, radiation field interaction with lattice vibr. at critical points of Brillouin zone 4=22895
 Si, recombination radiation in high elec. fields 1=2410
 Si, reflectance, for 1.5-25 eV photons 3=8584
 Si, single phonon absorption bands 2=16598
 Si, two-phonon indirect transitions 2=23350
 Si, 2-7 μ, anomalous absorpt. coeff. 1=1152
 Si, u.v. reflection, rel. to strong doping 3=18007
 SiC, absorption edge and u.v. spectrum 3=20485
 β-SiC, absorption, 2.3-2.9 eV 0=16062
 SiC, cubic, interband absorption, phonon energy deriv. 4=10218
 SiC, 15R, absorption edge, rel. to exciton transitions 4=7157
 SiC heated to 1000°C, spectral emittance 4=14443
 SiC, lattice absorption bands 1=11372
 SiC, p-n junction recomb. radiation 2=4044, 6476
 SiC, 6H and 4H polytypes, absorption 2=23562
 SiO on Pt and Inconel, heated to 1000°C, spectral emittance 4=14443
 SiO₂, doped, absorpt. bands prod. by X-ray irradi., bleaching 4=15499
 SiO₂ glass, 96%, "small pore", near i.r. 4=22889
 SiO₂, high-pressure polymorphs, rel. to co-ord. 4=1744
 SiO₂, quartz, infrared emission 1=8998
 Sm, visible, rel. to 4f shell transitions 3=13182
 Sm³⁺ in alkali halide crystals, absorpt., 300, 77°K 3=23079
 Sm³⁺ in alkali-halide single crystals, 4.2°K 4=22887
 SmCl₃ 3=3016
 SmCl₃, 150 and 250 μ absorption bands 4=26214
 SmFe garnet, far i.r. absorption 3=15680
 SmMg nitrate 1=2443
 Sn, far u.v. absorpt. edge, assignment to d-band transitions 4=15446
 SnBr₄, SnI₄, absorption edge, press. depend. 0=4407
 SnI₄, far i.r. absorpt. 3=8604
 SnO, absorption in Schumann u.v. region 1=17893
 SnO₂, absorption in Schumann u.v. region 1=17893
 [Sn(OH)₆]²⁻·M²⁺, (M=Zn, Cd, Co, Ni, Cu, Na), i.r., and 2-ion structure 4=10196
 SnS, i.r. absorption 1=17760
 SnS, p-type, reflection spectrum analysis 2=2217
 Sr nitrate, i.r. absorpt. 2=6580
 SrF₂, colouration, rel. to Mollwo relation 3=2837
 SrF₂ doped with Sm³⁺, absorpt. spectrum 4=17582
 SrF₂, Er³⁺ absorption 3=3000
 SrF₂, Y-doped, coloured by X-rays 3=8593
 SrF₂: Ho, Er, absorption of Ho³⁺ and Er³⁺ 4=13038
 SrF₂: Nd 3=20482
 SrF₂:Sm³⁺ 2=16815
 SrF₂:Sm³⁺, absorption, Zeeman effect 3=18026
 SrF₂:Sm³⁺, spectra analysis 2=14717

Spectra—contd

inorganic solids—contd

- SrF₂:Sm²⁺, vibronic model rel. to transitions away from k = 0 4=13085
 SrF₂:U⁴⁺, rel. to e.s.r. 2=23708
 SrN₈, u.v. absorption meas. 3=25450
 Sr(NO₃)₂, i.r., overtone and combination bands, rel. to NO₃⁻ vibrations 4=10163
 Sr(OH)₂, octahydrated, i.r. 1=1171
 Sr(OH)₂.8H₂O, absorption, rel. to O—H bond 1=7717
 SrTiO₃, oscill., 45°–140°C, rel. to dielec. permeability 4=30677
 SrTiO₃, i.r. reflection and transmission 4=26184
 SrTiO₃, i.r. reflection, 2–100μ, 45° to 140°C 4=1722
 SrTiO₃, i.r., 870–15 cm⁻¹, absorpt. 3=23064
 Ta oxide, anodic films, absorbance index 2=698
 Ta₂O₅, absorption 1=12498
 Ta₂O₅, absorption in Schumann u.v. region 1=17893
 Tb oxides, reflectance 1=7705
 Tb³⁺ in LaCl₃ and YCl₃ 3=15689
 Te, i.r. absorption, hole band structure 1=5048
 Te, i.r. absorption, in mag. field 1=12495
 Te, i.r. absorption, polarization depend., theory 0=6127
 Te, u.v. absorption 1=7709
 TeBr, absorption, local electron centres 1=11229
 TeCl, absorption, local electron centres 1=11229
 TeI, absorption, local electron centres 1=11229
 TeO₂, cryst. and glassy states 2=16819
 TeS, u.v. absorption 1=3841
 TiO, diffuse reflectance, in visible and near u.v. 3=23040
 Ti—O system, i.r. 3=20491
 TiO₂, diffuse reflectance, in visible and near u.v. 3=23040
 TiO₂, non-stoichiometric, reflectance 4=10197
 TiO₂ powders, u.v. absorption 4=26223
 TiO₂:Cu, absorpt. bands 3=25564
 Ti₂O₃, diffuse reflectance, in visible and near u.v. 3=23040
 Ti X-ray absorption spectrum 1=7720
 TlBr—NH₄Br system, reflection spectra 0=13714
 TlCl, absorpt. and reflectivity spectra 3=3023
 Tm ethyl sulphate 1=6209
 U fluorides, pentavalent, near i.r. absorption 3=18011
 U⁴⁺, in crystals 0=18130
 U⁴⁺ in octahedral coord. complexes, meas. 4=22900
 UCl₄, absorption, at liq. He temp. 2=14676
 UF₄, 2000A–8 μ, U⁴⁺ absorption 0=1731
 UF₄ and UF₆, effect of pressure 1=3834
 UO₂, i.r. absorption 2=6581
 UO₃, i.r. absorption 2=6581
 UO₂ Cl₂.2H₂O, u.v. absorpt. 4=10198
 U₃O₈, i.r. absorption 2=6581
 U₃O₈, spectral line intensity, carrier effect 4=26224
 V complexes, rel. to magnetic properties 4=10247
 V corundum, polarized i.r. absorption 1=3846
 V—O system, i.r. 3=20491
 V₂O₅, absorption 1=12498
 V₂O₅, non-stoichiometric, reflectance 4=10197
 VSO₄.7H₂O, absorption, 9000–35000 cm⁻¹ 1=2448
 Xe, trapped in Ar, Kr at low temps. 4=7160
 Xe, u.v. absorpt., 20°–50°K meas. 3=2998
 Xe, vac. u.v. absorption, at 4.2°K 0=13699
 Y garnet ferrites, i.r. absorption 2=685
 Y garnet, 1–6 μ transmission spectrum 1=7704
 YAl garnet, Pr-doped, absorption 3=23072
 YFe garnet, exchange splitting 0=6186
 YGa garnet:Cu²⁺, absorption 1=14609
 Y—Ga garnet, Ni-doped 1=17887
 Y(Gd)Cl₃.6H₂O, u.v. absorption 3=10945
 YH₃ and YD₃, i.r. 3=17658
 Y₂O₃:Eu, absorpt., excitation and fluorescence spectra 4=10221
 YbCl₃.6H₂O 1=19977
 YbFe garnet, far-i.r. 2=12713
 YbFe garnet, in mag. field, anisotropy of exchange 2=23566
 YbFe garnet, far-i.r. exchange resonance 1=14612
 YbFe garnet, ferrimagnetic resonance in far i.r. 3=15930
 YbFe garnet, Yb—Fe exchange interaction 1=8996
 Yb³⁺ in Y Ga garnet 1=2442
 Yb³⁺ in YAl and YGa garnets 4=1354
 Zn-blende materials, absorption near fund. edge 3=10954
 Zn-blende type semiconductors, fundamental reflectivity 1=17762
 Zn rhodanide, Pb activated, absorption and luminescence spectra 4=28739

Spectra — contd

inorganic solids — contd

- Zn₂Cd_{1-x}Sb_x, i.r. absorption, pleochroism 3=923
 Zn₂Cd_{1-x}Sb_x solid solns, i.r. absorption with polarized radiation 2=23415
 ZnIn₂S₄, single crystals, i.r. absorpt. 4=28713
 ZnO 3=957
 ZnO, absorpt. bands, dispersion shift 2=23565
 ZnO, absorption edge, press. depend. 0=4408
 ZnO, Cu²⁺ impurity, rel. to wavefunctions 4=4042
 ZnO, diffusion reflectance, visible and near u.v. 3=13190
 ZnO, exciton spectrum, from u.v. absorption and reflection 1=19982
 ZnO, higher order i.r. absorpt., 5–33μ 4=28714
 ZnO, i.r. absorption 0=8002
 ZnO, i.r. absorption, calc. 1=14607
 ZnO, i.r. reflection spectra 0=11767
 ZnO powder, effect of adsorbed CO₂ 2=6582
 ZnO₂, diffusion reflectance, visible and near u.v. 3=13190
 ZnO:Cu²⁺, absorption 1=14609
 ZnS 0=13700
 ZnS, absorption, rel. to elec. vector orient. 3=10970
 ZnS, absorption edge, press. depend. 0=4408
 ZnS, absorption, 220–600 mμ, 110–500°K 0=10048
 ZnS crystals, refl., temp. depend., 300–370mμ, 77°K–room temp. 4=26226
 ZnS, Cu and Ag activated, u.v. absorption 0=6161
 ZnS, effect of u.v. irradi. in different gases 3=10969
 ZnS, Fe²⁺ absorption in 0=10229
 ZnS, rel. to impurities 3=20528
 ZnS lattice absorption, 8° to 420°K 3=10967
 ZnS, optically active phonon processes 4=17560
 ZnS, reflection, for wurtzite structure 3=8583
 ZnS, u.v. refl., polarization effects 4=4279
 ZnS, u.v. and visible absorption at 4.2°K, rel. to excitons 2=14672
 ZnS (wurtzite), i.r. absorption, calc. 1=14606
 ZnS(Ag) emission bands 1=19978
 ZnS—CdS, Cu and Ag activated, u.v. absorption 0=6161
 ZnS:Cu, excitation and quenching of luminescence 1=10112
 ZnS:Cu, prep. by neutron irradi. of ZnS 3=13207
 ZnS:In crystals, yellow and green emissions under u.v. excitation 4=7189
 ZnS : Mn, absorpt. fine struct. and phonon coupling 4=22903
 ZnS:MnS, rel. to exchange-coupled Mn²⁺, 4.2°–300°K 4=7162
 ZnS : Tm³⁺ and : Ho³⁺, energy terms meas. 4=13089
 ZnSO₄.7H₂O, i.r. absorption, 350–4000 cm⁻¹ 4=22880
 ZnSb, absorpt. edge, polarization 11 to each crystal axis 4=22802
 ZnSb, p-type, absorption edge meas. 4=12919
 ZnSe, absorption 2=14679
 ZnSe, absorption edge, press. depend. 0=4408
 ZnSe, effect of oxygen 2=18867
 ZnSe, exciton absorption 2=18827
 ZnSe, layers, fundamental absorption edge 1=3842
 ZnSe, u.v. and visible, absorption, at 4.2°K, rel. to excitons 2=14672
 (ZnSe)_x—(CdSe)_y, diffuse reflection spectra 1=12363
 ZnTe, absorption 2=14679
 ZnTe, absorption edge, press. depend. 0=4408
 ZnTe, fundamental reflectivity 3=17979
 ZnTe, optical edge absorption 3=10968
 ZnTe, p-type, i.r. rel. to photon energy 2=21251
 ZnTe, reflection, rel. to band model 3=25467
 ZnTe, reflection peaks near exciton line 4=1705
 ZnTe, sharp lines rel. to bound excitons 3=10630
 Zr, oxide anodic films, i.r. absorpt. 4=23566
 ZrO₂, absorption in Schumann u.v. region 1=17893
 ZrO₂ heated to 1000°C, spectral emittance 4=14443
 ZrO₂, spectral line intensity, carrier effect 4=26224

 chrysene, powders and solutions, at 77°K 1=10114
 cis-butene-2 u.v. absorption cross-sections 3=1932
 cis-1, 2-dichloroethylene, microwave 1=8834
 coal vitrains, reflection spectra 0=11760
 complex mols., absorption, theory 2=16505
 complex mols., electronic absorption, adiabatic approx. theory 2=14261
 complex mols. in soln., absorption rel. to luminescence 2=17475
 complex mols. spectral classif. 2=16506
 complex systems, band characterization 2=18444
 complexes, trigonal, optical activity, model and data analysis 4=12419
 condensed medium, correcting for universal effective field 3=25077
 condensed medium, effect of internal field, models 4=3831
 condensed phases, motion and moment analysis, dipole-allowed 4=6542
 Condon loci geometry, from quantum viewpoint 4=3830
 conference on quantum mechanics, Sanibel Island (1963) 4=6449
 coronene, and mono- and divalent ions, electronic spectra, correlations 0=20648
 coronene, quasi-linear, true line-width 4=25699
 crystal spectra of very weak transitions 1=14592-3

Spectra—contd

organic molecules and substances—contd

- crystals, π -electron, triplet exciton interactions 3=25492
 crystals, isotopically disordered, absorption 1=7527-8
 cyameluric acid derivatives, aq. solns., u.v. 2=17466
 cyanides, complex, Raman 1=17333
 cyanine dyes, pressure effects 2=22988
 cyanoacetylene, rotational, in excited bending vibr. states 4=9735
 cyanogen, rotational analysis of 3000 Å absorpt. system 3=22582
 cyclic ethers, vac. u.v. absorption 3=15365
 cyclohexane, electron impact spectra 4=12394
 cyclopentane u.v. absorption cross-sections 3=1932
 DCN in org. solvents, vibrational absorption bands, freq. shifts and intensities 0=10669-70
 decaborane, near u.v., rel. to electronic spectrum 2=14300
 diamine-quinone complexes, optical absorpt. edges 4=26229
 1, 6-diaminopyrene solid complexes 4=13062
 diatomic, symmetric-top, unresolved bands, mol. consts. det. 3=10482
 diazenes 2=6185
 diazenes, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
 diazomethane, perpendicular bending modes meas. 4=1290
 diazomethane, vacuum u.v. absorpt. 4=22401
 dibenzene chromium, u.v. 2=2003
 dibenzyl, absorption spectrum 4=10205
 dibenzyl, effect of second impurity 2=16865
 dibenzyl-stilbene absorption, 4.2° and 20.4°K 4=17587
 1, 3-dienic silicohydrocarbons, vibr. spectra and struct. 4=30458
 diethyl ether, vacuum u.v. 4=3891
 9, 10-dihydroanthracene containing anthracene impurity 0=16066
 2, 2'-dihydroxy-1, 1' naphthalidiazine (lumogen), emission, absorpt. and excitation spectra 4=13099
 diketene 1=11121
 dimethylacetylene, perpendicular vibrational bands, internal rotation fine structure, theory 4=25701
 3-dimethylamino-6-aminophthalimide, collision stabilization 2=14260
 2, 6-dimethylnaphthalene, polarized absorption 0=18132
 2, 6-dimethylnaphthalene solution, absorption 4=5188
 2, 5-dimethylpyrazine, solvent effects on $n \rightarrow \pi^*$ transitions 0=15742
 dimethylsulphoxide, (CD)₃SO, rot. 4=22404
 dimethyl ether, vac. u.v. 3=12851
 dioxane, vac. u.v. 2=8104
 diphenyl, electron transitions, branched electron gas model 4=1992
 9, 10-diphenylanthracene, structural absorption, temp. depend. 4=30452
 diphenylene, in naphthalene 0=18131
 diphenylbutadiene, absorption spectrum 4=10205
 1, 4-diphenylbutadiene-1, 3, structural absorption, temp. depend. 4=30452
 2, 5-diphenyloxazole solns., rel. to concn. 3=1701
 diphenylpolyenes, absorption spectrum 4=10205
 distyrylbenzene derivatives in soln., absorpt. spectra 4=18209
 di-tetramethyl ammonium uranium hexachloride 3=8343
 dithioloxalato complexes, aqueous solns. 4=8212
 durene 2=12594
 dye films and solns., osc. strengths, overlap and luminescence quenching 4=11200
 dye solns., absorpt., and luminescence, diff. 4=14171
 dye solns., reflection, adsorption effects 4=16119
 dye solutions, absorption spectra 1=15891
 dyes, colour shift by electric field 1=6004
 effect of paramagnetic molecules on spin-forbidden transitions 1=14015
 electron scatt. meas. 4=3828
 electron spectra, rel. to optical props. of solvent 2=22940
 electronic, band intensity and position, solvent influence 4=6517
 electronic band systems, estimation of $\Delta\epsilon_e$ 1=14057
 electronic spectra, effect of solvents 0=15739

 eosine solns. in mono- and PMMA 2=9281
 eosine, yellow, in glycerine and polymethylmethacrylate, reflection symmetry 2=19566
 erbium ethyl sulphate, 0.9-1.1 μ , 77° 4°K 4=10173
 ethane, continuous absorpt. spectrum 4=25690
 ethane, electron impact spectra 4=12394
 ethane-type mols., perpendicular vibrational bands, internal rotation fine structure, theory 4=25701
 ethane u.v. absorption cross-sections 3=1932
 ethanol, O₂ u.v., absorption bands 2=5020
 ethers, vinyl alkyl, vibr. spectra 2=16548
 ethyl bromide, u.v. absorption in gas and solid 1=855
 ethyl iodide, u.v. absorption in gas and solid 1=855
 O-ethylaniline vapour, near u.v. absorpt. 4=17303
 ethylene, continuous absorpt. spectrum 4=25690
 ethylene, electron impact spectra 4=12394
 ethylene, electron scatt. meas., agreement with u.v. 4=3828
 ethylene, lowest triplet states 1=850
 ethylene u.v. absorption cross-sections 3=1932
 europium benzoylacetate soln., ¹⁵²D₀ → ⁷F₂, spectrum 4=30461
 exciton absorption in crystals, effect of deformation and mag. field 2=10598
 exciton lines, enhancement in elec. field 2=10594
 far u.v., theory and expt., review 2=14284
 ferrihaemoprotein hydroxides, correl. of mag. and spectrosc. props. 4=20145
 ferrocene 1=12290
 ferrocene 2=6183
 ferrocene and ferricinium ion, effect of pressure 1=11089
 fluorescein, absorption spectra, rel. to solute concentration 1=15887
 fluorescein cation, absorption 1=14013
 fluorescein, solns., absorption, effect of pH medium 2=19565
 fluorescein, solns. in mono- and PMMA 2=9281
 fluorescein solutions 4=29637
 fluorescein, u.v., visible and i.r., by quantum chemistry 3=2647
 fluoroacetylene, rotational, in excited bending vibr. states 4=9735
 O-fluoroasinoles vapour, near u.v. absorpt. 4=17304
 α and β -fluoronaphthalenes, u.v. absorption 0=5956
 forbidden character of allowed electronic transitions 0=15747-8
 forbidden transitions, effect of mol. vibr., calc. 2=12341
 formaldehyde, mag. dipole transition 3=12852
 formaldehyde, magnetic h.f.s. 1=12281
 formaldehyde, singlet-triplet transitions, mag. rotation 1=14038
 formaldehyde, 3000 Å absorption, mag. dipole charac. and rotatory power 3=728
 formyl fluoride 0=15740
 Franck-Condon locus deriv. 2=18445
 gases selectively excited in Fe afterglow meas. 4=12385
 gases, vibrational absorption band intensities, temp. dependence 1=12928
 glycine and addition cpds., i.r. and Raman spectra 4=22907
 (glycine)₃.H₂SO₄ rel. to dielec. dispersion 2=16768
 glyoxal, singlet-triplet transitions, mag. rotation 1=14038
 guanidine Cr sulphate hexahydrate, polarized light absorpt., 1.7°, 4°, 20°K 3=13192
 hexachloroacetone, u.v. absorption spectra 1=8846
 hexadeutero benzene, u.v. Rydberg series, derivation of ionization potentials 1=7478
 hexaethyldisiloxane, i.r. rel. to temp. 2=17467
 hexafluoroacetone, u.v. absorption spectra 1=8846
 hexa-m-phenylene radical anion 4=25731
 n-hexane, glow emission, analysis of four regions 1=14044
 holmium ethyl sulphate, optical absorpt. 3=8600
 hydrocarbon-quinone complexes 2=8669
 hydrocarbons, alternat. and mono- and divalent ions, electronic spectra, correlations 0=20648
 hydrocarbons, aromatic, in boric acid glasses, photo-ionization study 0=21290
 hydrocarbons, aromatic, glow emission, analysis of four regions 1=14044

Spectra—contd

organic molecules and substances—contd

- hydrocarbons, aromatic polynuclear, solvent shifts in paraffin hydrocarbons 0=16707
 hydrocarbons, conjugated, nonalternant, electronic spectra, calc. by limited configuration interaction method 4=20087
 hydrocarbons, electronic interaction 0=11530
 hydrocarbons, unsat., Raman and electronic abs. spectra 3=15319
 imidazole, electrophilic substances present, u.v. spectrum 4=15370
 impurities, in crystals, electron transition frequency 2=23567
 infrared, induced electric moments 1=7469
 iodine solns., u.v. and visible absorption peaks 0=16705
 isopentane, dispersion curves 3=17592
 isoprene polymerizing with Li, Na, K, in solns. 4=25796
 isotopic analysis 2=23987
 Keynon-Banfield radical, in methanol soln. 2=14584
 liquids, electronic absorpt. rel. to Raman spectrum 4=21135
 liquids, i.r. absorption lines rel. to temp. 2=9279
 liquids, i.r. reflection, rel. to optical constants 1=7698
 liquids, vibration absorpt. bands, intensity, temp. depend. 3=21376
 long-chain hydrocarbons, torsional vibrations 1=19627-8
 ketones, n- π^* u.v. absorpt. and i.r. CO band, correl. 0=7791
 measurement of absorpt. spectra of optically-excited species, 10⁻⁷ sec lifetime 4=2842
 mesonaphthodianthrene photo-oxide 0=21289
 metal coordination cpds., polarized crystal spectra 1=19975
 methane, absorption, 2470-3200 cm⁻¹ 0=15735
 methane, rel. to C-H bond moment 2=12339
 methane, continuous absorpt. spectrum. 4=25690
 methane, electron impact spectra 4=12394
 methane, solid, vac. u.v. absorption 0=13696
 methane, test of theoretical absorpt. band model approx. 4=9743
 methanol and alkali and alkaline earth halides in methanol, absorption 4=2683
 methanol, NO u.v. absorption bands 2=5020
 methanol, O₂ u.v. absorption bands 2=5020
 methyl alcohol, in acetonitrile, O-H bond 3=8285
 methyl bromide, unresolved bands, mol. consts. det. 3=10482
 methyl iodide, u.v. absorption in gas and solid 1=855
 methyl orange dyes on silica and silica-alumina gels, absorption, recording meth. 2=19705
 methyl red in solid polystyrene, Stark effect 2=14664
 3-methylaminophthalimide, effect of medium 3=1703
 methylcyclohexane and benzene, oxygen and CCl₄ effects 2=14674
 methylcyclohexane, fluorinated, dispersion curves 3=17591
 methylene blue and green liquid crystals 4=24220
 methylene-blue, polarization measurements of absorption spectrum 1=11099
 methylene, spin-spin interaction 3=17602
 molecular crystals, i.r., atomic vibration study 2=699
 molecules, rotational spectra, h.f.s. theory 2=12313
 monoalkylbenzene, absorption 2700 Å, rel. to substituent radicals, 20°K 4=7141
 monohalogen benzenes, glow discharge spectra 1=16286
 mononitrophenols adsorbed in solution and solid surfaces, reflectance 4=25711
 naphthacene, in dibenzyl and diphenyl, impurity conc. depend. 1=11374
 naphthacene in organic crystals, absorption 2=6568
 naphthacene, solvent shifts 2=21910
 naphthacene, in tolan, stilbene and p- ditolyl, 20°K 1=11375
 naphthacene vapour, absorption and fluoresc. 4=1300
 naphthalene, absorption bands, oscillator forces 2=23541
 naphthalene, absorption bands, various props. 2=18837
 naphthalene, band spectra, triplet-triplet transition 2=3015
 naphthalene derivatives, absorption and phosphorescence spectra 0=5949
 naphthalene and deuterionaphthalenes, vibr. spectra 4=30465
 naphthalene, and dihydroxy derivatives, absorption, comparison 2=20855

Spectra—contd

organic molecules and substances—contd

- naphthalene, electronic structure invest. 2=22992
 naphthalene h-8 and d-8 2=16817
 naphthalene, with methylnaphthalene and naphthols, temp. depend. 0=21003
 naphthalene and octodeuterated naphthalene, absorption 2=6566
 naphthalene, self-absorption band, 20-290°K 2=8526
 naphthalene, shifts, rel. to solubility in compressed nonpolar gases 4=6633
 naphthalene, solid, absorption spectrum 2=12595
 naphthalene, solid, shock excitation, CN, C₂ and CH bands 1=2310
 naphthalene, solutions, changes on addition of ferric acetylacetonate 3=15359
 naphthalene, solvent shifts 0=16707
 naphthalene, solvent shifts 2=21910
 naphthalene, term scheme 4=20473
 naphthalene, thermally stressed films, absorption, 20°K 4=15606
 naphthalene, 3200 Å system at 4°K 1=14592
 naphthalene, u.v. 3200-2200 Å 3=934
 naphthalene vapour, absorption bands, at 3200 Å 1=8843-4
 naphthalene vapour, u.v. emission, r.f. excited 1=7476
 naphthalenes, D-substituted, rel. to Rashba effect 4=1714
 naphthalenes, fluorinated, electronic shifts 0=5957
 naphthols, hydrogen bonding and electronic spectra 1=17329
 naphthols, oscillator strengths 2=18470
 β-naphthylamine, non-radiative transitions 1=6034
 nickelocene 1=12290
 nickelocene 2=6183
 nitrobenzene, electronic, SCF-MO calc. 1=14064
 nitromethane, molecular orbital calc. 0=15712
 novomethylene blue liquid crystals 4=24220
 octacyanide complexes 3=725
 n-octadecane, dispersion curves 3=17592
 octamethyltrisiloxane, liquid and crystalline, i.r. rel. to temperature 3=14169
 octodeuteronaphthalene, thionaphthene doped, 20.4-77°K 4=4316
 organophosphors, absorpt. spectra 3=20492
 1,3,4-oxadiazole in polystyrene, absorption 2=1160
 oxadiazoles, absorption, rel. to 1-methylnaphthalene 3=18815
 oxalyl chloride, u.v. absorption 2=14289
 oxazine dye crystals, absorption 1=14595-6
 oxazoles, absorption, rel. to 1-methylnaphthalene 3=18815
 2,2'-paracyclophane, electronic spectrum 3=4773
 n-paraffin, rel. to C-H bond moment 2=12339
 n-paraffins, crystalline, vibrational spectra, methylene rocking and wagging modes 0=13697
 para-nitrosodimethylaniline, freq. depend. of scatt. intensity in electronic absorpt. band 4=25713
 pentacene-pyrene mixed crystals, emission props. 4=30692
 n-pentane, dispersion curves 3=17592
 n-pentane u.v. absorption cross-sections 3=1932
 perfluorobenzene, near-u.v. absorpt., 690°-1900°K 4=3887
 n-perfluoroheptane, dispersion curves 3=17591
 perylene, lowest electronic transition, strong exciton coupling 4=20249
 phenanthrene, quasilinear phosphoresc. spectra 4=15374
 phenanthrene, solvent shifts 0=16707
 phenanthrene, solvent shifts 2=21910
 phenazine, absorption, 77° to 4.2°K in n→π* transition region 2=10601
 phenol, under flash photolysis 0=6413
 phenol, hydrogen bonding and electronic spectra 1=17329
 phenoxy radical in nitrogen matrix, rel. to photolysis 3=3403
 p-phenylenediamine, rel. to electronic structure calc. 2=8115
 phenylpropionic acid and derivs. C≡C, C=O bands 4=25714
 pheophytin 1=5053
 pheophytin a, monomolecular films 4=3942
 pheophytin solutions 2=15601
 phthalimide derivs., in liq. soln., rel. to interacts. 2=18472
 phthalimide, u.v., in alkaline solns 4=9759
 phthalimides and dyes, electronic-vibr. transition 2=14291

Spectra—contd

organic molecules and substances—contd

- phthallic acid, powder, reflection, rel. to absorbed layer 3=23062
 phthalocyanine complexes 2=18751
 phthalocyanine crystals, absorption 2=16825, 18829
 phthalocyanine crystals, polarization 3=20495-6
 phthalocyanine, frozen crystalline solution, emission and absorption 4=7163
 phthalocyanine, metal-free single crystals 3=10971
 phthalocyanines, rel. to degrees of association 3=18013
 π-electron systems 1=19646
 plastic scintillator, absorption spectrum 1=7726
 polyacene mono- and dinegative ions, absorpt. spectra 4=20093
 polyacenes, self-consistent field calc. 4=15375
 polyacenes, triplet → singlet transitions, polarization 2=20857
 polyacrylonitrile-AgNO₃ complex, i. r. 4=12509
 polyatomic, electronic spectra of solutions 2=14294
 polyenes, substituted, in various solvents 3=23891
 polyethylene, absorption, rel. to electron irradi. 4=1416
 polyethylene, crystalline vibrational spectra 2=23905
 polyethylene, i.r., b_{1u}, methylene wagging and twisting 0=15792
 polymer solutions, idealized relaxation spect. 1=15884
 polymerized methacrylic acid adsorption on glass, i. r. 4=7728
 polymers and hydrated monomers, i.r., rel. to intermolec. mechanics 4=20142
 polymers, i. r., rel. to oxidation 4=4697
 polynitroalkanes, vibrational spectra, analysis 4=9760
 polynucleotide, helical, double-stranded, exciton bands 4=9799
 polyphenyls, absorption spectrum 4=10205
 polytetrafluoroethylene, infrared transmittance and emittance 1=8999
 polyvinyl chloride, colour change on electron bombardment 1=10103
 polyvinylene, absorption bands 4=3951
 POPOP, solvent effect, dipole moments 3=25127
 porphin complexes, Kuhn electron gas model, ring form 0=9814
 porphyrin 1=5053
 porphyrin charge-transfer complexes with sym-trinitrobenzene 3=2651
 porphyrins 3=25129
 porphyrins, theory 0=20658
 phosgene, vacuum u.v. absorption 1=3548
 phosphors, pressure effects 1=20019
 phthalocyanines, absorption 1=7707
 phthalocyanines, absorption 1=11361
 pressure broadening, quantum-mech. impact theory 2=12305
 pressure shifts from solvent data 1=8125
 propane u.v. absorption cross-sections 3=1932
 propylene u.v. absorption cross-sections 3=1932
 propylene, vac. u.v. 2=6178
 protoporphyrin, absorption 1=7707
 protoporphyrin, absorption 1=11361
 purines, single crystals, polarized absorption spectra 3=25131
 pyrazine, n → π* transitions, excitation transfer splitting 1=12292
 pyrazine 2=6176
 pyrazine, elec. dipole nature of 3700 band 4=20092
 pyrazine, ground-triplet transitions and mixing 3=22588
 pyrazine, solvent effects in n → π* transitions 0=15742
 pyrazine, vibr., calc. and study 4=22411
 pyrene, absorpt. spectra at 20° and 4°K 4=10235
 pyrene in fluorene lattice, and polarization of first two singlet states 4=22410
 pyrene, polarization of first two electronic transitions 0=15755
 pyrene, solutions, changes on addition of ferric acetylacetonate 3=15359
 pyrene-tetracyanoethylene complex, polarized absorption 4=22909
 pyridazine, i. r. solution spectra, solvent shift 1=8123
 pyridazine, n → π* transitions, excitation transfer splitting 1=12292

Spectra—contd

organic molecules and substances—contd

- pyridine and deuteropyridines, vibr. spectra, calc. and interpretation 4=9761
 pyridine, ground-triplet transitions and mixing 3=22588
 pyridine, 1500-2000A symmetry reduction 2=6176
 pyridine, u.v. absorption in different solvents 0=6804
 pyridine, u.v. Rydberg series, derivation of ionization potentials 1=7478
 pyrimidine, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
 pyrimidine, 1500-2000A symmetry reduction 2=6176
 pyrimidines, single crystals, polarized absorption spectra 3=25131
 quasilinear, obtained at low temp. and in paraffin solid solutions 3=18012
 quinoxaline 2, 3 dithiol chelates with Ni, Co and Pd, absorption spectra 0=20631
 Raman scattering tensor for vibrations of any class of crystal 1=14613
 rare-earth ethyl sulphates, crystal field splitting 2=20906
 relation to fluorescence, mirror-image relation 3=23892
 review, USSR work 0=9809
 rhodamine B, influence of solvent mixture of MAM or ethanol 3=21378
 rhodamine B and 6G in glycerine and in polymethyl methacrylate, reflection symmetry 2=19566
 rhodamine B and 6G, solns. in mono- and PMMA 2=9281
 riboflavin, on addition of amino-acids 3=8954
 rotational, with centrifugal distortion and torsional splitting, analysis tables 4=3834
 salicylaldehyde—ethylenediamine copper (II) complex 1=11373
 sample mounting for u.v., compacted disks with KCl 1=18593
 semiconductor dyes, long-wave absorption, singlet excitation state 0=13619
 simple molecules, theoretical computations 3=10500
 solids, impurity atom effects on vibrational absorption spectrum 1=10098
 solute, u.v., rel. to dielec. const. of solvent 2=17440, 19550
 solutions, absorption rel. to fluorescence spectra, exptal. support for formula 1=18411
 solutions, effect of solvent 2=15595
 solutions, triplet state absorption, external heavy-atom spin-orbital coupling 4=8214
 solvent shifts 2=21910
 spontaneous emission at absorption band wavelengths 1=12927
 stannohydrocarbons, ene-yne, vibrational 2=16547
 stilbene, absorption spectrum 4=10205
 stilbene, in CCl_4 and mol. vibr. 4=12510
 stilbene and derivs., absorpt. and fluoresc. 3=735
 stilbene in n-octane at liq. H_2 temp., absorption and luminescence 4=5187
 stilbene, in octane at liq. N temp. 2=23609
 stilbene, 1-17 μ absorption, frequencies and intensities 4=15607
 stilbene, π -electronic u.v. studies 3=25133
 stilbene, u.v., rel. to photoisomerization process 2=14675
 stilbene, p-monohalogen, u.v. 2=14675
 stilbene—tolan, absorption, 20°K 1=11376
 styrene polymerizing with Li, Na, K, in solns. 4=25796
 substituted benzenes, perturbation theory calc. 1=6031
 sym-trinitrobenzene 4=15361
 p-terphenyl solns., rel. to concn. 3=1701
 tetracene microcrystals, bands at 5330 and 5350 Å, evidence for surface excitons 1=6090
 tetracene—pyrene mixed crystals, emission props 4=30692
 tetrachloroethane, far i.r. 3=24031
 tetrachloroethane, i.r. reflection, rel. to optical constants 1=7698
 tetracyanoethylene complexes 2=4040
 tetracyanoquinodimethane, absorption peaks, rel. to pressure 4=30602
 tetracyclic hydrocarbons and their alkyl-substituted derivatives 3=15360
 tetrauterioallene, Raman and i.r., integrated intensities and polarizations 4=6609
 tetrahydrofuran, vac. u.v. 3=15365
 tetrahydropyran, vac. u.v. 3=15365

 tetramethyl-1,3-cyclobutanedione, u.v. 3=17606
 s-tetrazine, vibr., calc. and study 4=22411
 tetrolaldehyde, near u.v., analysis 2=14290
 thalidomide, u.v., in alkaline solns 4=9759
 thiazine dye crystals, absorption 1=14595-6
 thionaphthalene, near u.v., vapour 3=15368
 thionine violet liquid crystals 4=24220
 tolan, absorption spectrum 4=10205
 tolan, u.v. absorption 1=14056
 tolane, oscillator strengths from i.r. dispersion data 4=4282
 toluenes, halogen-substituted, singlet \rightarrow triplet absorption in near u.v. 1=14053
 trans-dichlorotetrammine Co III, tetragonal splittings 4=22399
 transition-metal pentacyanonitrosyl complexes 2=6570
 transitions, polarizations and assignment 1=17331
 s-triazine and trimethyl-s-triazine, singlet-triplet absorption 1=10126
 s-triazine, $n \rightarrow \pi^*$ absorption spectrum 1=17322
 tri-1-naphthylboron, intramolecular charge-transfer bands 1=19641
 trimethylene oxide, vac. u.v. 3=15365
 triphenylene, and mono- and divalent ions, electronic spectra, correlations 0=20648
 triphenylmethyl, absorption and fluoresc. spectra at 4.2°K 3=4976
 triplet state decay in isopentane solns. 4=11198
 triplet state perturbation due to one singlet state 2=20781
 triptycene, u.v. absorption, calc. 1=6023
 trisoxalatometallates, crystalline 0=16067
 tryptaflavine cation, absorption 1=14013
 tryptaflavine in gelatine, absorption spectrum 1=6866
 tryptaflavine in poly and monomethylmethacrylate, absorpt. 4=22416
 tryptaflavine solutions 4=29637
 u.v. absorption, temp. depend., H-bonding 0=5950
 as u.v. converters, for gas scintillation counters 2=1626
 unidentified emitter in reaction between N_2 and chlorinated hydrocarbons 1=20731
 uranyl acetate, absorption bands analysis 3=8282
 vacuum u.v. review 1=17323
 vibrational, calc. methods 4=6524
 vinyl chlorides, i.r. bands at 1.6, 1.1, and 0.8 μ 2=14280
 vitrine, ultra-thin sections, absorption of u.v. and visible light 0=20992
 weak absorption, meas. 1=8831
 Wurster salts, anomalous bathochromic shift 4=6639
 xylenes, proton frequency spectr. neutron diffr. meas. 4=28251
 ytterbium ethyl sulphate, 0.9-1.1 μ , 77°, 4°K 4=10173
 C_3 radical, in flash photolysis of diazomethane 4=6613
 CBr_4 , Cl_4 , absorption edge, press. depend. 0=4407
 CCl radical, emission spectrum 1=3546
 CCl_4 , i.r. reflection, rel. to optical constants 1=7698
 CCl_4 , infrared intensity and breadth calc. 1=9394
 CDCl_3 in non-polar—proton-acceptor solvent, rel. to H-bond formation 4=28208
 CD_3H , vibrational—rotational bands 0=7761
 CH, in acetylene— O_2 detonation 1=12677
 CH band, blackening in hollow cathode 3=19936
 C—H, (0,0) band, spin-doublet splittings 1=2332
 CH radical, $^2\Pi$ state, dissociation energy 4=12527
 CH_2 3=7328
 CH_2 u.v. Rydberg type band series 2=548
 CH_3 3=7328
 CH_3 radicals, recorded through flash-heated grids 0=17759
 CH_4 , absorption cross-sections, 600-170 Å 4=15272
 CH_4 , Jupiter high dispersion spectra 0=14397
 CH_4 , 1850 to 4000 Å, absorption 4=11249
 CH_4 , emission, excited by protons and H atoms 3=15338
 CH^+ , extension of $^1\Pi-^1\Sigma$ system 0=6551
 CH^+ ($^1\Pi-^1\Sigma$) cometary band, rot. temp. 3=25118
 CHCl_3 , absorption spectra 1=2757
 CHCl_3 , infrared intensity and breadth calc. 1=9394
 CHCl_3 , intense i.r. absorpt., 740-810 cm^{-1} 4=30455

 Pfund spectrograph, double-pass, rel. to solar research 4=20889
 photoelectric, for auroral spectra 0=8791
 photoelectric correlator for laser-beam analysis 3=9596
 photoelectric, with Fabry-Perot interferometer 0=3634
 photoelectric grating, for astron. use 3=9148
 photoelectric, with oscillating mirror scanning, 0.4-0.9 μ 0=14820
 photoelectric, scanning, Abel inversion, use of analogue computer, 3=14347
 photoelectric, use of spherical Fabry-Perot interferometer 0=16873
 photographic recording in vacuum u.v., review 3=21538
 plane grating, improvement of image quality 4=8415
 plane grating, stigmatic, from Zeiss 1=2864
 plane-grating type, giving a flat spectrum 1=9476
 plane-grating vacuum type, for far i.r., bolometer detector 1=2862
 polarimeter, also for monochromatic meas. 4=24395
 polarization spectrofluorimeter, automatic recording 4=14401
 polarizing interferometer, high luminosity, low resolving power 0=19417
 polarizing, ultra high vacuum system 4=14225
 power leveller for K band, milliwatt range 4=8928
 prism, calibration using computer interpolation 1=4463
 prism-, converted to grating-spectrometer 2=19713
 prism spectrograph, for i.r. atmospheric radiation 0=8419
 prism type, with 2 polarizing components, intensity meas. 1=12990
 quartz Cornu prism type, for far u.v. 0=14822
 quartz, with photoelectric attachment, for spectrochem. anal. 0=14828
 Raman direct-recording 0=5161
 for Raman spectra recording 3=24033
 for Raman spectra study 0=3620
 rapid scan, for plasma 4=27315
 recording spectrograph, for quartz transmission range 3=24035
 reflectometer, meas. of direct spectral reflectances at normal incidence, 0.2-2.5 μ 4=14363
 reflectometer modification, for u.v. reflectivity meas., at 4°K 4=14364
 resolution improvement, i.r. Perkin Elmer 221 4=21296
 resolving power, improvement, by suppression of intermediate image 0=14825
 resolving power rel. to integral transmission 2=107
 with rotating-disk scanning 0=16860
 single-beam, scanning distortions 0=10776
 for solar eruption spectra study, λ 3550-9000 Å 0=18768
 solar, Lyman- α , dissecting, satellite-borne 4=10939
 solar radiation in far u.v. 3=23682
 solar rotation meas. 2=4711
 solar spectrograph, scatt. light elim. 2=9046
 solar spectrum effect during long exposure 1=9479
 spectral diagram reduction to standard size by photographic method 1=10596
 spectrofluorimeter, energy-recording type 1=2865
 spectrogram, broad line, meas., by scanner comparator 3=16315
 spectrograph, time-resolved, for triggered light source use 1=9477
 spectroradiometer, wide-angle, 420-1100 nm 3=21542

Spectrometers — contd

 microdensitometer, nonrecording 4=16236
 microphotometer, automatic recording 1=11839
 microscope, measuring, photoelec. setting device 2=11484
 mirrors, front faced Al, conversion factor anomalies 4=21299
 modulator, for removal of continuous-background 4=21298
 monochromator, high-resolution, for multi-wavelength simultaneous observations 1=8229
 monochromators, substitution of diffraction gratings, for prisms 4=8430
 optical cell for Raman spectra at medium pres. 3=24034
 optical filter selection, for grating spectrometers 0=1032
 photoelectric detection, of Raman spectra 0=3618
 photoelectric recording attachment, for Soviet instrument 3=21552
 photographic films, u.v., far, low fogging 3=24064
 photomultiplier attachment, with 4 exit slits, for quartz spectrograph 0=14828
 polythene cell for infrared 2=15731
 predisperser for grating spectrographs 3=24026
 prism, reflection, for autocollimation alignment 3=21527
 prism system for fast spectrographs 2=22039
 prisms, fused silica, inhomogeneity compensation 3=21528
 pulse discharge radiation recorder, with 10^{-8} sec time resolution 4=315
 Raman high-pressure gas cell 0=6932
 Raman low temp. apparatus 0=12484
 for Raman spectrometer 2=1265
 raster illuminating device, with cylindrical lenses 0=3615
 receiver for spectra lasting 10^{-7} sec. 1=18597
 reflectometer, absolute, for use with Cary 14 spectro-photometer, at low temps. 4=11339
 servo-method for spectral energy distributions 1=12988
 shutter, fast e.m. 4=21300
 shutter, high speed 0=6935
 shutter, mechanical, for extremely short exposure times 0=16862
 shutter for 1μ sec exposures 1=9478
 shutter, 2μ s 4=8426
 slit drive, automatic, for i.r. 0=156
 spectral photographs, use of interferometric photometry 4=14357
 sun-tracking head 3=21550
 time resolu. by rotating mirror camera in 2000-7000 Å 4=8425
 tracking systems, for double-beam i.r. instruments, anal. 1=4466
 window, AgCl cavity, for i.r. liquid cells 3=16779
 Be monitor, with intermittent elec. arc 1=1454

Spectrometers, radiofrequency—

amplifier, parametric, as first stage of mag. res. spectrometer 3=24485
 atomic beam mag. reson. apparatus 2=18242
 for atomic short-lived states, fine structure det. 0=17708-9
 autodyne, 30 Mc/s for direct nuc. mag. dispersion signals by frequency discrimination 4=16676
 automatic frequency control 4=18644
 backward-wave oscillators used as radiation sources 1=9691
 beam maser and cavity absorption spectrometers, sensitivities compared 1=3074
 beam maser spectrometer, constr. and operation 1=16594
 with bidirectional square-wave freq. modulation 2=1609
 Boltzmann interferometer for plasma study, 0.1-10 mm 3=9957
 carcinotron application 0=9807
 cathode follower amplitude control 4=18645
 cavity, for e.s.r. meas., at high temp. 1=12023
 cavity, variable coupling reflection 1=10802
 coaxial bridge, high-sensitivity 3=7724
 crystal mount, universal 2=1614
 for cyclotron radiation of H ions 2=19861
 detector sensitivity, props. of crystal diodes and barretters 1=1981
 e.s.r. det. of no. of free electrons contributing to signal 1=16596
 e.s.r. and double reson. travelling wave helix, use 2=17976
 e.s.r., with h.f. field modulation 4=21662

Spectrometers, radiofrequency—contd

e.s.r., h.f. modulation of d.c. mag. field 1=13191
 e.s.r., with homodyne balanced mixer detection 1=4736
 e.s.r., long cavities for aqueous samples 4=3191, 3193
 e.s.r., 1.2 cm 4=19247
 e.s.r., resonant-cavity and travelling-wave types 3=516
 for e.s.r. signals up to 1.1 Mc/s 1=16599
 e.s.r., slow sweep generator 2=11811
 e.s.r., source-frequency fluctuation compensation 1=9693
 e.s.r., superheterodyne pulse spectrometer 3=7725
 e.s.r. 3 cm, with 3×10^{16} ΔH unpaired spin noise-level equiv. 3=24486
 Fabry-Perot interferometer used 3=21984
 ferromagnetic resonance, microwave, recording, permeability 4=783
 gases, expt. and analysis technique 2=20785
 for gases, at medium pressures 0=19951
 generator, square-wave, high voltage 1=10664
 grating 0=1224
 high frequency modulation arrangement 1=16598
 high-power, amplitude modulated, frequency stabilized 1=13186
 high-resolution Stark-modulated instrument 2=5494
 high-temperature designs 4=12459
 induction, superheterodyne 1=10803
 integrated line intensity meas. 0=5428
 klystron, phase-stabilized system 2=3176
 for line-width measurement 1=5603
 line width measurement by triple modulation method 1=9692
 mag. resonance, appl. of semiconductor switch 1=4547
 magnetic spectrum analysers, 4 types 1=19047
 marginal oscillator type, 100-300 Mc/s 2=1610
 maser 3=12354
 maser, gas, three-level 1=12026
 minimum detectable signal change, independence of detector type 1=16597
 molecular-beam mm-wave apparatus 2=18449
 n.m.r. absorption detector 1=382
 n.m.r., amplifier noise 1=2928
 n.m.r. apparatus at Louvain Laboratory 1=19050
 n.m.r. for broad lines in solids and liquids 1=19051
 for n.m.r. in crystals 4=17689
 n.m.r., high resolution 0=3865-6, 5431, 11066
 n.m.r., high-resolution 4=24873
 n.m.r. in liquids, weak field 1=1612
 n.m.r., for organic cpds. structures 2=20171
 n.m.r. pulse apparatus 1=1977
 n.m.r., simple r.f. phase detector 2=9726
 n.m.r. transistorized, with frequency mod. 0=11064
 n.q.r. apparatus for freq. ~ 1 Mc/s 1=9695
 n.q.r., superregenerative, feedback coherence control 4=19249
 for nucl. quadrupole Zeeman spectra 0=17123
 nuclear resonance pulsed spectrometer for solids 4=17688
 paramag. resonance, bridge analysis and applications 0=19952
 paramag. resonance, broadband mm wave 0=9225
 paramagnetic resonance, at zero magnetic field 1=9694
 parametric spectrograph for quadrupole resonance 1=12025
 piezoelectric coupling detection in powders 3=24504
 plasma, microwave energy detector 2=5497
 Pound-Watkins, frequency stabilization, appl. to n.m.r. 1=3073
 precision Zeeman modulation 0=3869
 pulsed X-band e.p.r. 2=3177
 r.f. spectrograph with tuned circuit 2=5498
 radioastronomical, 21cm 3=16430
 recording spectrograph for absorption and refract. index studies of gases 1=8395
 self-quenched superregenerative, side-band suppression 0=5429
 signals, distorted by linear apparatus correction 2=4907
 spectrograph for e.s.r. 2=3179
 spectrograph for NMR meas. in ferromagnetics 1=16603
 spherical Luneberg lens 1=18566
 spin echo, for nuclear relax. study in liqs. 4=16127

Spectrometers, radiofrequency—contd

for spin-lattice relax. times meas., adiabatic passage technique 0=9223

for spin-lattice relaxation meas. 2=20172

Stark cavity type 0=491

Stark cavity type, "antimodulation" intensity meas. 0=15176

Stark waveguide 4=30069

superheterodyne spectrometer, for 9 Gc/s 1=5604

superheterodyne spectrometer, 9300 Mc/s 1=4735

technique for studying diamagnetism of gaseous

plasma 1=7074

3-cm, with klystron noise compensation 2=3178

tube and parametric, band-width and sensitivity 3=24484

for 2.5-5 mm wavelengths 0=1227

using maser techniques, sensitivity 1=1980

variable frequency, v.h.f. 0=10249

video, sensitivity improvement and noise reduction 1=16595

Zeeman, for cm wavelengths. 3=21983

Ge, n-type, 34 kMc/s detector 1=16608

NH₃ cell, direct absorption, near 23.86 Gc/s 3=3837

Spectrophotometers

See also Colorimeters.

absorption curve recorder 2=7358

absorption, for petrographic sections of

powders 0=8792

for absorption spectra of crystals in polarized light 2=17613

adapter for automatic meas. 2=17624

Asagio observatory, calibration by Kienle step-filter 2=6971

astronomical, pulse-counting, dual-channel 3=9145

atomic absorption technique device 3=24025

attachment for luminescence meas. with Soviet SF-4 instrument 2=22028

attachments for micro-absorption meas. 1=1821

for auroral studies 1=6634

Bauschad bomb 505, rel. to photodetector spectral response meas. 4=24370

Beckman IR-7, freq. reproducibility, accuracy (630-4000 cm⁻¹) 2=17611

burner, atomising, three capillary spray for spectrophotometry 4=24371

Cary-14, collaborative readings 0=160

cell holder, with Zeiss PMQ11 4=27319

concave grating, for 600-4500 Å 2=1266

double beam, for i.r. emission of gases 0=8794

double-beam microscope, assembly and performance 4=27320

double beam, for reflection coeff. meas. 0=5152

double beam, sensitivity and accuracy 4=14360

échelle, for solar u.v. meas. from satellite 2=13123

8-14 μ , for extra-terrestrial objects 3=21080

fast transmission spectra comparison with standard 1=2866

filter grating, i.r., design and props. 2=17610

flashing-light type for photosynthesis obs. 4=16234

furnaces for Cary 14 spectrophotometer 1=10595

grating, high resolution 0=16859

grating instrument, calibration for 240-600 m μ

fluorescence spectra 2=22027

grating, photoelectric 3=18996

grating, for Schumann u.v. range 0=3632

grating, Wood diffraction anomalies 2=17623

gratings, polarization of diffracted light 2=22056

Hardy, use as spectroradiometer 2=15733

head for microspectrophotometer 4=16235

high-resolution atomic-beam instrument 1=6954

i.r. 3=18990

i.r. analysers, process control 1=12986

infrared, calibration with rotating mirrors 2=9392

infrared, double-beam automatic recording 4=14358

i.r., double-beam, distortions, due to recording system 0=10777

i.r., extraneous radiation effects on accuracy 4=2835

infrared, freq. reproduction and accuracy 2=22026

i.r., fiducial wavenumber marking system 3=7342

i.r., linearity testing 4=8416

i.r., optical null double-beam double-pass system 4=8414

i.r., photometric calibration 4=8413

infrared spectrophotometer 2=5167

i.r., ultrarapid-scan 0=16856

Spectrophotometers—contd

in integrated intensity measurement, of i.r. bands 4=29753

Jobin-Yvon, with microscope attachment, u.v. to i.r. 0=14824

logarithmic, 0.2-0.7 μ 1=5345

luminescence, a.g.c. amplifier to correct for light source varns. 3=5605

metals, reflectivity meas., adaptation 2=5168

microdensitometer for continuous scanning of angularly-orientated spectral lines 4=2838

microscope-spectrophotometer 0=3595, 6929

microspectrophotometers with CdSe cells 3=24024

modification, Beckman DK-2R, for light source, spectral distrib., meas. 3=18991

moving specimen intensity modulation for improved sensitivity and accuracy 3=21551

oscillating Fabry-Perot, for rapid meas. of intensity 1=16081

photoelectric, for atm. spectra study 2=19231

photoelectric, construction and use 0=18588

photoelectric, high-dispersion 0=10761

photoelectric, for sky light meas., 0.3 to 1.0 μ 3=1448

photoelectric instrument for successive determ. of elements 4=7796

polarized-light attachment, for absorption meas. on crystals 2=1267

for polarized spectra recording, Beckman DK accessory 4=14370

portable spectro-radiometer for visible region 3=24030

prism-grating, transmittance, effect of polarization 4=16233

prism-grating, for universal use 4=8412

prism type, stray light determination 0=12485

for pulsed low-intensity sources 2=7357

Raman cell, for low temp. 4=29755

Raman, polarization compensator 2=105

recording apparatus, u.v.-i.r., review 1=4465

recording data on filing cards, for Perkin-Elmer

model 0=157

recording errors, optimal parameters 1=4457

recording spectrophotometer for 40-1200 μ 3=14351

reflection oximeter 0=8435

for reflection and transmission meas. at normal

incidence 4=10200

rocket-borne, far-u.v. 4=10940

rotary dispersion attachment, for visible and u.v. regions 4=29778

Russian, SF-4, attachment for luminescence spectra, 330-550 m μ 0=10762

SF-4, integrating sphere attachment, u.v. 2=106

scanning and integrating instrument for small objects 3=9595

solar, high-speed, photoelectric 2=925

for spectrochemical analysis, alloys, U.S.S.R., U.K., U.S.A., performance. 3=25848

for spectrochemical analysis Al alloys, multichannel, photoelectric, performance. 3=25850

for spectrochemical analysis, steel, multichannel, photoelectric, performance. 3=25849

spectrofluorimeter, double beam 3=3880

spectrofluorophosphorimeters 4=29754

spectrometer analysis of small samples, figure of merit 1=10299

spectropolarimeter, photoelectric 2=2902

specular reflectance attachment for Unicorn

SP 600 4=21302

stellar, integrating, description and operation 2=927

stellar spectra, continuous background det., effect of resolving power 1=15503

stellar spectrophotometric gradient, effect of resolving power 1=15504

stray-light determ., methods and materials used 4=8423

temperature-control system and remote stirring 1=233

for thermoluminescence, alkali halides, rapid scanning, automatic 3=18992

transmittance, NBS glass standards, recalibration 4=8420

u.v. cell for low temperatures 1=10594

u.v. recording micro, 2200-7000 Å, for tissue cell absorpt. 3=14349

u.v.-visible, photometric standard 3=1816

u.v., wavelength range extension 0=14823

ultra-violet vacuum, conversion to visible, density recording 3=18993

Spectrophotometers—contd

- ultraviolet with pulse lamp 4=14371
- vacuum, for solid state 2=2889
- for vacuum u.v. region 3=18994
- wavelength calibration, from crossover point of 2 filters 0=3624
- White i.r., accessory for pressure broadening study, i.r. active gases 0=8799
- X-ray, for simultaneous analysis of several elements 4=30009
- Optica CF4, adaption for spectral meas. over range of temp. 4=14366
- Ag sulphite photocell for near infrared range 1=9474
- Ho filter for wavelength scale checking 1=10591
- SF4, absorption cell, for meas. down to -130°C . 4=8428
- SF-4 spectrometer, optical density meas., stray radn. effects 4=27313
- VC1 vacuum quantumeter, use in determ. of S, P and C in low-alloy steels 4=7795

 Permalloy films, cathode-sputtered, props. 1=6324
 Permalloy films, coercive force variations 2=12660
 Permalloy films, rel. to structure and magnetic anisotropy 3=15819
 Permalloy source, broad, self-sustaining, for evaporation of ferromag. films 4=29182
 plasma, r.f. method 3=6883
 polycrystalline metals, by inert gas ions 100-1000 eV 1=18950
 pulse, in inert-gas glow discharges 3=24243
 quartz, cathode sputtering, by Kr ions 4=12825
 quartz, by Xe⁺ 1=3026
 review 3=7653
 review 4=8637
 satellites, as atmospheric ionization mechanism 2=4877
 single-crystal film semiconductor compound prepn., cathodic 4=4665
 single crystals, effective collision radius value 4=1546

Sputtering—contd

single crystals, rel. to incident particle directions 3=19374
 sputtering-ion pumps, Ti sheets for cathodes 4=21191
 surface cleaning efficiency 3=4203
 theory 0=12088
 theory, effect of collision focusing 4=25979
 thin β -ray sources, prep. 0=17516
 thin film, yield monitoring from thickness meas. 2=11724
 threshold, definition and criteria for exptal. threshold 1=8362
 time-of-flight mass spectrometer study 2=20053
 titanium ion pumps 1=18481
 transition metals for superconducting films, protected 4=18587
 vel. distrib. of sputtered atoms 4=19126
 velo. meas., atoms, time of flight 3=14681
 velocity of metal atoms ejected by ion beam 2=9649
 yield curves, maximum lattice-chain energy 1=7110
 yield meas. 3=14679
 yields of metals for A⁺ and Ne⁺ ions, 50-600 eV 1=4669
 yields, spectroscopic meas., thresholds rel. to displacement energies for 20 metals 0=12653
 yields, from var. metals, Hg⁺ bombard., angle of incid. depend. 0=1173
 yields, at very low bombard. energies 2=15966
 Ag films, inside electron microscope 3=451
 Ag films, Kr⁺, As⁺, Ne⁺ yields meas. 2=11724
 Ag, by inert-gas ions 1=13136
 Ag, by inert-gas ions 4=4105
 Ag, by ion beams, atomic collision sequences 1=14157
 Ag, by ions of inert gases 4=4105
 Ag, by light ions 0=10989
 Ag, single and polycrystals 0=3815
 Ag target, 45 keV ions, collection formula 2=3096
 Ag by A ions, etching patterns and orientation 2=6764
 Ag by Ar⁺ ions, 1-10 keV yields of single crystals 4=4103
 Ag, by Ar⁺ ions, 30-170 keV 4=22644
 Ag by Ar⁺ ions, 10-200 keV 3=7655
 Ag-Pd with A, He and Xe positive ions 0=12645
 Al, by Ar⁺, 1.2 MeV; preferential ejection 3=7656
 Al, by Hg, 500-3000 eV, energy distrib. of Al⁺ and impurity K⁺ 4=21583
 Al by Hg⁺ ions, energy distrib. of neutral and charged sputtering products 4=6904
 Al monocrystal, atomic ejection sequences by Ar⁺ bombardment, 50 keV 3=2845
 Al, by Zr ions, ~ 10 keV 3=4219
 Ar, re-emission of sorbed Ar 3=9518
 Ar⁺, N⁺, N₂⁺, incident on Cu and Al, momentum accommodation above sputtering threshold 4=19123
 Ar⁺, on 16 metals, full-plane threshold energies 3=22875
 Au, by A ions 1=4671
 Au by A⁺ and Kr⁺ ions, using radioactive tracers 2=3098
 Au, by Ar⁺ ions, directional ejection, effect of thermal motion 3=452
 Au, energy spectrum, rel. to thermal spikes investig. 3=8421
 Au, film formation 2=8880
 Au films, by inert gas ions meas. 3=10707
 Au, focused collision sequence energy, <110> 4=4096
 Au, under 43 keV, Xe⁺ ions, atom energy spectrum 2=17900
 Au, by ion beams, atomic collision sequences 1=14157
 Au targets, low-energy yield, guarding effects 3=22876
 Au, threshold energy to displace atom from lattice and subthreshold displacement 4=12827
 Au, by 20-100 eV He, Ne and A ions 2=13607
 Au by Ar, meas. of yield by replication 4=27582
 Be, Ni, Pt, by inert gas ions, rel. to mass ratio 4=19124
 C, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Cr, by A⁺ and Hg⁺ 0=12653
 Cr, under electron bombard., achieving ultra high vacuum 2=17518
 Cs, surface layer sorbed on Mo, rel. to secondary emission 4=5717
 Cu, angular dependence for single crystals 3=10705
 Cu, by A⁺ and H₂⁺, directed emission 0=10990
 Cu, by A⁺ ions, rel. to crystallographic direction 2=3094
 Cu by A⁺, Kr⁺, Ne⁺ of 300-2000 eV energies 1=9647
 Cu, by Ar⁺, Cu and Cu₂ emission, mass spectrometric study 4=14769

Sputtering—contd

Cu, Ar⁺-ion bombardment, 25-75 keV, focused recoil trajectories 3=2049
 Cu by Ar⁺ ions, 1-10 keV, yields of single crystals 4=4103
 Cu by Ar⁺ ions, 10-200 keV 3=7655
 Cu, by Ar⁺ ions, 30-170 keV 4=22644
 Cu by Ar⁺, 1-2 MeV; preferential ejection 3=7656
 Cu, by Ar⁺ and Ne⁺, temp. var. 4=10018
 Cu₂Au, with A, He and Xe positive ions 0=12645
 Cu, cathode, particle vel. meas., rel. to focusing energies 3=25315
 Cu cavity cathode, conical projections 4=16552
 Cu crystals, by Ne⁺, Ar⁺, Kr⁺, Xe⁺ ions, 100-1000 eV 3=4218
 Cu^{63,65} by Cs¹³³⁺ ions, isotopic abundance determ. 2=22925
 Cu, rel. to directions of incident Ar particles 3=19374
 Cu, by 80-1200 eV ions, energy distrib. 4=24754
 Cu, by energetic ions, surface study 2=1523
 Cu, by 5-25 keV ions 1=8363
 Cu, by H ions 2=7676
 Cu, by H ions 3=4218
 Cu, by H ions, up to 50 keV 0=9109
 Cu, by inert-gas ions 1=13136
 Cu, by ion beams, atomic collision sequences 1=14157
 Cu by ion bombardment, 40° to 900°K target temp. 4=20320
 Cu, mass analysis of emitted positive ions 2=7675
 Cu, on metals, hollow-cathode Ar discharge 3=16988
 Cu, by Ne⁺, Ar⁺, Cu⁺ ions, 5-20 keV 3=4217
 Cu and Ni by 27 eV, A ions 1=10745
 Cu and Ni by 27eV, A ions 1=11985
 Cu, in O and Ar, thin film prep. 4=23572
 Cu, (100) faces, by 15-30 keV Ar⁺, Ne⁺ ions 3=13020
 Cu, (100) and (111) faces deposit patterns 3=15522
 Cu, preferential atomic ejection directions, bombarded by Ar⁺ ions, 40 keV 4=4095
 Cu single crystal, ratio anisotropy 4=25983
 Cu single crystals, anisotropy 4=12823
 Cu single crystals, by deuterons, meas. 2=13609
 Cu, single crystals, at ion energy 50-350 eV, orientation depend. 0=19810
 Cu single crystals, temp. dependence 4=10017
 Cu, by Sn, Zr and Mg ions, ~ 10 keV 3=4219
 Cu (100) surface, by 27 keV Ar⁺ ions 3=10703
 Cu target, 45 keV ions, collection formula 2=3096
 Cu, threshold energy to displace atom from lattice and subthreshold displacement 4=12827
 Cu, by 20 keV Ar⁺ and Ne⁺, temp. var. 4=10018
 Cu, by 20 keV Ne⁺, Ar⁺ and Kr⁺ ang. depend. 4=17459
 Cu, by various ions at 5-25 KeV, calc. 1=11987
 Cu, by Xe⁺ ions, 25 to 60 keV 4=20321
 Cu₂O, films, deposition by sputtering of Cu in Ar and O 3=16138
 Cu₂O, films, growth structure, by electron diffr. 3=16139
 Fe, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Fe polycrystalline spheres, by Ne⁺, Ar⁺, Kr⁺, Xe⁺ ions, 100-1000 eV 3=4216
 GaAs, mol. mechanism and surface structure models 4=25985
 GaSb 4=30598
 Ge, deposit patterns 3=22877
 Ge, ejected atom distrib. 2=13608
 Ge, ejection patterns, 0-350° C 4=6903
 Ge, as etching technique 2=10959
 Ge surfaces, hillocks 3=24386
 K, by noble-gas ions, angular distrib. 1=11986
 K by rare gas ions 2=3093
 KCl, low-energy, K atom ang. distrib. 3=4215
 Li, absence of isotopic separation 2=227
 Mo, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Mo cathode, surface layer removal by Kr ions 4=27581
 Mo, by Cs⁺, spectrum, from ions dislodged by sputtered atoms from auxiliary target 3=12258
 Mo, in inert-gas glow discharges 1=16442
 Mo polycrystalline spheres, by Ne⁺, Ar⁺, Kr⁺, Xe⁺ ions, 100-1000 eV 3=4216
 Mo⁺ ions during Mo bombardment by Cs⁺ 2=1524
 Nb, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Nb films, gasfree, by asymmetric a. c. sputtering 4=5523

Sputtering—contd

Nb, in prod. of superconducting films 2=17720
 Nb, vapour-deposited superconductive films, use as getter in vacuum system 4=11481
 Ni, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Ni, (100) faces, by 15-30 keV Ar⁺, Ne⁺ ions 3=13020
 Ni, by Hg ions, energy distrib. of Ni atoms 4=14770
 Ni polycrystalline spheres, by Ne⁺, Ar⁺, Kr⁺, Xe⁺ ions, 100-1000 eV 3=4216
 PT, by inert gas ions 0=17043
 Pb, by A⁺ ions, rel. to crystallographic direction 2=3094
 Pb, by Ar⁺, 1-2 MeV; preferential ejection 3=7656
 Pt, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Pt, film formation 2=8880
 Re, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Si, by A ions 2=22279
 Si, by A⁺ ions, yield rel. to A⁺, 1=1930
 Si, with argon and CO₂ ions 1=8361
 Si, ejected atom distrib. 2=13608
 Si surfaces, with A ions 2=22279
 SiC by positive ions 3=4214
 Ta, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Ta films, rel. to resistance and temp. coeff. 4=20811
 Ta, in prod. of superconducting films 2=17720
 Ta target, 45 keV ions, collection formula 2=3096
 Ta, vapour-deposited superconductive films, use as getter in vacuum system 4=11481
 Ta and Mo, by 900-2150 eV Cs⁺ ions 0=9107
 Ti, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 Ti by D ions, 10 to 25 keV 3=449
 V, vapour-deposited superconductive films, use as getter in vacuum system 4=11481
 W, cathode sputtering ratio, under Cs bombard., energy depend. 4=24753
 W, effect of ambient gas at high temp. 3=14680
 W, guidance and collimation in discharge 2=9647
 W, surface vacancies, after α -irrad. 3=17775
 W, var. K ion energy, temp. 4=19127
 Zn, by Ar⁺, 1-2 MeV; preferential ejection 3=7656
 Zn, deposit patterns 3=22877
 Zn single crystals, anisotropy 4=12823
 Zn and W patterns, from 30 keV Ar ions 4=12828

Statistical mechanics — contd

lattice, plane Ising—Onsager dipole, partition function 3=21252

lattice point theory, generalized in hyperspace 3=3761

lattice systems, grand canonical ensemble, Monte Carlo calc. 3=16545

lifetime effects in condensed fermi systems 1=13037

light amplification, linear, and attenuation, quantum statistics 4=27275

linear colloids, order—disorder theory 3=3416

linear couplings, between even and odd variables, free energy with time reversal 1=79

linear system with arbitrary masses, frequency eqn. 4=8082

linked-cluster expansion for electron gas "toron" formalism 0=4276

linked-cluster expansions, appl. to nonspherical situations 0=14527

linked-pair expansions, Lee and Yang method 1=8075

Liouville eqn. for relativistic charged particle 4=8094

Liouville equation, Green's function 1=4274

Liouville's eqn., application to collisionless Boltzmann eqn. 0=16621

Liouville's eqn., asymptotic case, application 0=10615

Liouville's eqn., asymptotic case, study method 0=10614

Liouville's eqn., perturbation soln., time independent 0=18963

Liouville's eqn., and resolvent formalism 0=16619

Liouville's eqn., soln. 0=16620

Liouville's eqn., for weakly interacting gas 0=3509

liquid crystals, nematic phase, molecular-statistical theory 0=14625

liquid mixtures, associated 2=21896

liquid molecular interactions, cage model 1=11753

liquids, critical fluctuations and opalescence 0=14659

liquids, with molecular interaction 3=21314

long-range correlations in a closed system, appl. to nonuniform fluids 1=9345

Lorentz gas, Boltzmann elastic collision action on isotropic velocity 1=8079

Lorentz gas, transport eqns. 2=1085

macromolecular configurational changes and isomeric equilibria 1=10430

macromolecules in chains in velocity field 0=15793

macroscopic observables, ergodic theory 0=4954

macroscopic observables and generalized canonical ensembles 1=9331

magnetic ion systems, isolated and adiabatic susceptibilities 0=13724

magnetic lattice, disordered 0=18160

magnetic lattice, disordered, at low temps. 0=18161

magnetic resonance for strong exchange interact. 3=23214

many-body problem, conference, Hoboken (1957) 4=27090

many-body problem, degenerate phase in Bose-Einstein condensation 0=4948

many-body problem, formulation in terms of av. occupation no. in momentum space 0=3458

many-body problem, maximum linearization 4=27094

many-body problem, method of approach 1=72

many-body problem, review 0=3448

many-body problem, rotation about barycentre 2=9152

many-body problem, zero-temp. limit for dilute hard spheres 0=3457

many-body problems in solids 2=579

many-body system with square-well interaction 2=11299

many-body systems, analytical invariants 0=16612

many-body systems, perturb. theory techniques 3=1627

many-body systems, stochastic models 2=13272

many-body systems, trial wave-functions 3=14066

many-boson system, chem. potential and low-lying excit. 4=91

many-boson system, reaction matrix 1=18312

many-boson systems, perturbation theory 3=3768

many-boson systems, single and gen. condensation 3=1635

many-boson systems, weak-coupling expansion for ground-state energy 0=900

many-fermion perturb. series, divergence 3=21262

many-fermion system, exactly soluble model 3=23799

many-fermion system, graphical resummation 4=12101

many-fermion system, Green's functions 0=6697

many fermion system, zero-temp. props. 3=9370

many-fermion systems, degenerate problems, perturb. theory 3=9364

Statistical mechanics—contd

many-fermion systems, nonuniform, one-particle Green's function 3=5385

many-particle problem, redundant coords 2=17375

many-particle problems, congress, Utrecht (June 1960) 1=1707

many-particle problems, review 0=48

many-particle systems, of arbitrary spin, statistical weight 0=2137

many-particle systems, classical, coupling rule 2=11295

many-particle systems, classical, theorems 3=3759

many-particle systems, with linear interaction, time-dependent fluctuations 0=16625

many-particle systems, theory 0=896

many-particle systems, time Green functs., analytical props. 3=3765

Markov processes and Boltzmann's H-theorem 1=18292

masers, quantum, radiation field 3=12356

masers, three-level 1=16551

master eqn., generalized, t'-matrix expansion 3=11732

master eqn., global, deriv. 4=18104

master eqn., properties 2=2635

master eqn., with special transition probab. 3=11717

master equation, quantum, generality 4=24102

matrix method appl. to DNA transitions 0=20707

Mayer's fugacity series, cluster integrals, mutual cancellation 4=8103

Maxwell-Boltzmann law generalizations 4=79

Maxwell equations, macroscopic, derivation from field operators 1=8372

Mayer diagrams, equilibrium props. 1=5205

measurement theory, irreversibility 0=4950

mechanics and thermodynamics, foundations, conference 0=14523

Mellin transforms, applications 1=11715

meson cloud, hydrodynamical model 0=9290

metals, electron-phonon interaction 0=11592

metals, fluctuation and conductivity theory 1=10661

metastable states in strongly coupled quantum systems with continuous spectra 1=8081

micelles, ionic and nonionic 4=7790

micro- and macromeasurements 4=27089

microcanonical ensemble 4=29540

mixture of particles, reduced distrib. function 3=14048

mixtures, Ising square lattice, interaction parameter 1=12812

mixtures, "one fluid" theory, var. property 4=14067

model system, comparison with original perturbation theory, expectation values 3=18737

molecular chaos and Kirkwood superposition hypothesis 0=18971

molecular collisions 4=6662

molecular dynamics, mixture of hard spheres 4=18093

molecular dynamics, small number of elastic spheres 0=18993

molecular friction const., calc. 1=10545

of molecular ions, equilibrium against dissociation 1=2353

molecular potential curves and energy surfaces for small nuclear separations 1=17377

molecule migration, in gas mixture 0=8560

molecules, isotope substituted 2=1082

molecules, nonspherical 4=5123

molecules, pressure broadening theory 2=3689

monatomic systems in external periodic potential field 1=8066-7

Monte-Carlo applications to statistical physics 1=5219

motion of a charged particle, classical treatment 1=9342

multicomponent fluids, double-index distrib. functions 4=21070

multicomponent system, binary collision method 3=5379

multicomponent systems, mol. Kerr effect 3=7249

multiple particle prod. using information theory 4=3312

multiple scattering, by new expansion theorem 1=8072

N-body problem, one-dim., exactly soluble, with δ -function interactions 4=18086

N-dimensional spherical volume, redetermination 3=3761

n-pion wave function, symm. props. 4=15085

negative probability, physical meaning, applic. to particle theory 1=18295

Nernst heat theorem 3=1626

 wedge, edge near corner 4=5117
 wedges, thermoelastic problems 1=1716
 X-ray measurement 2=6712
 Ag-Zn alloys, shear stress values, critical resolved, rel. to temp. and comp. 4=28982
 Ag₃-Al, for prismatic slip, rel. to strain rate and temp. 4=30783
 AgMg, flow stress rel. to low-temp. and strain rate, Peierls' mechanism 4=30785
 Al alloys, for strength determ., theory and expt. 4=13380
 Cr, yield stress, effects of C, N, O and S 4=30770
 Cu films 3=11145
 Cu sheet surfaces, X-ray refl. obs. 4=26499
 KCl, shearing temperature range of quenching 3=11172

Stress effects

(Heading introduced in 1962)

- acousto-elastic effect, velo. meas., metallurgical appls. 3=23275
 alkali halides, O₂⁻ mols. alignment 2=14362
 alloys, magnetic structure and properties 3=8634
 on anisotropic defects in crystals 3=22695
 Armco ingot iron, blue-brittle 1=1308
 bar, cylindrical, plastic strain wave propag. 3=5484
 beam, deformation and primary creep 2=10759
 body-centred cubic crystal, moving edge dislocations 3=10654
 Brass, cumulative fatigue damage 4=28946
 α-brass, stress-corrosion process 3=11190
 Bravais crystal, phonon frequ. shifts 3=2717
 brittle solids, fracture stress rel. to grain size and residual strain, theory 4=10364
 colloids, coagulation under shear 2=8938
 creep, high-temp., activation energy 2=4326
 creep-resistant materials, thermal cycling effects 2=21447
 crystal dislocation displacement, b. c. c. crystals 4=17430
 and crystal dislocation velo. 4=12745
 crystal space groups reduction to subgroups 4=4514
 crystals, acoustic dispersion anomalies 4=6726
 crystals, homog. stress, small-ampl. sound waves 4=13368
 crystals, review 3=25626
 crystals, vacancy formation, rel. to internal stresses 3=22741
 crystals, vibrating, nonelasticity theory 2=4320
 cyclic, internal mechanism for fatigue 2=6755
 cyclic stress required for edge cracks propag., results for eight materials 4=30759
 dislocation helix or prismatic loop 3=8434
 dislocation vel. depend. on stress 3=13341
 dislocations in material, cross-section bounded by concentric ellipses 2=17383
 elastic wave generation by transient surface heating stresses 4=5275
 f. c. c. metal rel. to point defects 1=17523
 f. c. c. substitutional mixed crystals, rel. to deformation 4=10359
 ferromagnet, elastic, rel. to Barkhausen noise 3=3104
 ferromagnetic films, rel. to orientation 3=20598

Stress effects—contd

- fibres, energy storage, flexural and tensile 4=15681
 films bulged over circular openings 1=11728
 geological shear folding laminar models 4=23711
 glass, internal friction 2=23739
 glass, micropore growth 3=18365
 glass, silica, high-pressure densification, effects of shear 3=8919
 granular structure porosity, as for most random config. 4=17831
 graphite, pyrolytic, graphitization 4=20704
 graphite, on radiation-induced dimensional changes 4=25464
 graphite suspension, elec. noise spectrum shear rate, conc., particle size effect, time dependence 4=26765
 ice crystal etching 4=23317
 ice, effect on subsequent thermoluminesc. 3=13649
 on magnetic domain structure in Si steel 4=7256
 magnetic films, ripple origin in ferromag. films 4=26300
 magnetic hysteresis loops, asymm., creep 3=6705
 magnetic materials, for force meas. 4=7361
 magnetization, thermomagnetic, direction effects 2=4704
 metal crystals, vacancies, interactions with stress fields, theory 4=12728
 metal films, resistance—strain characteristics 3=22902
 metals, cold-worked, particle size and strain broadening separation, X-ray profiles 3=25754
 metals, cyclic, effect on internal stresses 3=13345
 metals, dislocations and fatigue crack propagation 4=13382
 metals, grain size effects 2=19000
 metals, pure, high-stress fatigue, initial stages of damage 4=7394
 metals, quenching stresses on vacancies 4=1462
 metals, vibratory 3=13377
 multidomain partially magnetized systems, susceptibility and magnetization effects 2=4705
 Nicaloi, ferromagnetic permeability, angle effects 4=13185
 nuclear spin diffusion, strain interruption 3=3186
 ordering alloys, strain ageing 3=8775
 oxide crystals, symm. splitting 3=25614
 paper, surface structure under rolling pressure 3=13553
 Permalloy, mag. initial susceptibility and elec. cond. 4=7282
 Permalloy magnetic films 4=13211
 plastic materials, strain rate rel. to temp., eqns 4=28918
 plastics, impact ductility 4=28919
 point defects, ordering, thermodynamic theory 4=6824
 polycaprolactam fibre film long range order 4=23618
 polycaprolactam, mol. mobility, n.m.r. obs. 4=23617
 polyethylene terephthalate, mol. mobility, n.m.r. obs. 4=23617
 polymer spherulites, lamellar twist 4=26581
 polymethyl methacrylate, β-relax., stress relax. and creep, activation energies, theory 4=28922
 polymethylmethacrylate in diphenyl solution, shear rel. to viscosity 3=16619
 polymethyl methacrylate, stretching, 100°-200°C rel. to birefringence 3=17982
 quartz, high transient stress, dielec. breakdown 2=12574
 in real (inhomogeneous) solids rel. to eqn. of state 2=3851, 8178
 relaxation estimation from creep 4=13376
 remanent magnetization 2=4706
 rock-salt struct. crystals, rel. to slip effect on strain-hardening 4=23105
 ruby, e.s.r., and spin-lattice interaction 4=23055
 rupture, apparatus for stress-rupture testing of filaments 4=17719
 rupture mechanics, conference, Southampton (April, 1961) 2=8745
 semiconductors, kink nucleation theory 3=17730
 semiconductors, many-valley, elastocaloric effect 3=4832
 shear, on viscosity, lubricating oils 3=9422
 silicate glass, static stress fatigue and strength 4=13446
 soil deformation by beam resting on it 3=5144
 solid solns., strain ageing, solute atom segreg. 3=5139-40
 solids, effects of ultrasound 4=10463
 solids, mechanical response to extreme e.m. radiation 2=11398
 steel, austenitic, stainless, Ti-stabilized; rel. to weld corrosion 3=3337
 steel, fatigue damage 3=25643

Stress effects—contd

- steel, mild, explosively loaded, Bauschinger effect 4=23215
 steel, Ni—Cr—Mo alloy, rel. to martensite transformation 3=3323
 steel, X-ray line profiles 4=23143
 steels, elastic consts. depend. on tensile stresses 3=3210
 strain-hardening debris mechanism 2=21010
 stress relaxation, activation energy, theory and expt. 4=28922
 on supercond. transitions of Ta, Sn 2=7518
 surface topography meas., use of Moiré patterns for isopachics 4=14007
 thermoelastic, in initially stressed bodies 2=4324
 tunnel diode, on excess current 4=11749
 water surfaces, wind-induced stresses 4=8155
 waves in solids, review 4=11279
 Ag—In, directional ordering, anelastic piezo-resistance 4=12847
 β -AgMg, low temp. flow-stress behaviour 4=23205
 Ag—Zn, directional ordering, anelastic piezo-resistance 4=12847
 Al, absorption, acoustic waves, u.s., time var., 15-200 Mc/s 3=22648
 Al, absorption, u.s., second harmonic, due to dislocations 4=9842
 Al alloy, X-ray line profiles 4=23143
 Al crystal surf. patterns, rel. to cyclic stresses 2=10785
 Al, cyclic, effect on internal stresses 3=13345
 Al, conductivity, elec., low temp. 4=22667
 Al, density change rel. to thermal fatigue 2=10772
 Al, fatigue investigation 3=18213
 Al, polycrystalline, crystal orientation under axial strain 2=6741
 Al, polycrystalline, and recovery effect on creep 4=13391
 Al, stress relax., creep and internal friction, activation energies 4=28922
 Al substructures, creep-resistant, recovery 4=23122
 Al superconducting film transition temp. 4=14517
 Al, tensile, dislocation arrangements 3=20754
 Al—Cu, Al—Mg, Al—Si alloys, hardening, strain-age 4=17722
 Al—Cu, deformation, ductile fracture 2=6750
 (Al, Cu, Mg) system, rel. to ductility 4=23129
 Al—Mg alloy, fatigue, superimposed at 1% of static, rel. to creep. 3=13365
 (Al, Mg) system, rel. to ductility 4=23129
 Au, fatigue investigation 3=18213
 Au, pure, void formation 3=13364
 BaTiO₃, dislocations under mechanical impulses 4=1495
 BaTiO₃, domain orientation, rel. to mechanical load 3=22995
 BaTiO₃, structure rel. to hydrostatic pressure up to 600 kg cm⁻² 3=3302
 Be—Cu (97.5%), hardening rate 4=23148
 C, elementary atomic layer diameter, 1000°—2000°C 4=29103
 CaCO₃, twinning dislocation movement 2=4364, 8769
 CaCO₃, twinning kinetics 3=3260
 CaF₂(Eu²⁺), uniaxial stress spectra 3=10943
 CaF₂, "piezospectroscopic" effect in optical spectra 2=23559
 CaF₂:Eu, piezospectroscopic splitting of 5735 Å band 2=16847
 CaF₂ (Sm²⁺) absorpt. spectrum 2=18830
 Cd, ductility, cyclic stress induced, and dislocation 4=10372
 Cd, polycryst., flow under simple shear 4=23130
 CdSe, exciton lines 3=6652
 Co, deformation twins, by tensile loading, -196°C 3=8800
 Co, magnetization 4=17647
 CoFe₂, antiferromagnetic reson., far i.r. 4=13302
 CsI crystals, kinking 2=6723
 Cu alloys, on precipitation 4=20701
 Cu, cold-drawn, tension effect on room-temp. creep 4=28945
 Cu, Cu¹, dislocations from cyclic strains 3=12984
 Cu, dislocation loops, prismatic 3=10671
 Cu, fatigue investigation 3=18213
 Cu, hardening of fractured specimen 4=28940
 Cu, internal energy increase 4=23144
 Cu, long-range back, nature 4=26505
 Cu, precipitation and dissolution, from cell interface migration 4=26549

Stress effects—contd

- Cu, recovery after unidirectional and reverse straining 4=28944
 Cu single crystals, neutron irradiated, effect of prestressing 4=13398
 Cu, work hardening under cyclic straining 3=20737
 Cu, X-ray line profiles 4=23143
 (Cu, Al) system, rel. to ductility 4=23129
 Cu₃Au crystals, strained, frictional stress on dislocations 4=26507
 Cu₃Au, ordered, strain hardening 3=16001
 Cu—Mn, directional ordering, anelastic piezo-resistance 4=12847
 Cu—Ni films, submicroporosity 3=23510
 CuO, absorption spectrum, blue region 3=4971
 Cu₂O, "piezospectroscopic" effect in long wave absorption edge 2=23559
 (Cu, Sn) system, rel. to ductility 4=23129
 Cu—Zn, directional ordering, anelastic piezo-resistance 4=12847
 Fe, b.c.c., ageing and fatigue limit 4=13417
 Fe, crystal dislocation substructure, effect of N, Mn 4=23161
 Fe, ferromagnetic permeability, angle effects 4=13185
 Fe, technical, strain-ageing meas. 4=13415
 Fe wires, small torsion, mag. anisotropy 3=20577
 Fe²⁺ e. s. r. in MgO 4=30736
 Fe—Ni alloys, on magnetic domains 4=10280
 Fe—3%Si, mag. domain structure, effect of compression 3=13263
 GaAs, piezoresistance coeffs. 2=23394
 Ge, acceptor binding energy, strain dependence 2=23343
 Ge, bond bending 4=28305
 p-Ge, breakdown characts. depend. at low temps. 4=22710
 Ge, breakdown, elec., 5.2°K 4=20365
 Ge donor spin-resonance lines 3=10792
 Ge, donor wave-functions 2=8340
 Ge, doped with P, e.s.r. line splitting 3=18131
 Ge, doped with Sb and Ga, piezothermal cond., liq. He temp. 3=10766
 Ge, elastocaloric effect, calc. 3=4832
 Ge, elec. conductivity changes 4=4150
 Ge, impurity cond. in n-type 2=8339
 Ge, magneto-optical effect rel. to strain, 77°K 2=23528
 Ge, magnetoresistance, p-type 4=10053
 Ge, n-type, degenerate, piezoresistance, valley splitting 3=10787
 Ge, n-type, effect of tension on impurity conduction 2=23341
 Ge, p—n junc., on characts. 4=22739
 Ge, p—n juncs., on I—V charact. 4=26072
 Ge p—n junctions, excess current 3=25378
 Ge, piezorefectance 2=18799
 Ge, Sb- and As-doped, conductivity, 1° to 300°K 3=22931
 Ge, Sb-doped, interband tunnelling 3=13095
 Ge, shallow donors, e. s. r. meas. 4=13318
 Ge, thermal cond. increase, 1.5-4.2°K 2=3854
 LiF: hexavalent U, spectral line, splitting 3=8619
 LiF, "piezospectroscopic" effect in optical spectra 2=23559
 LiF, piezospectroscopic splitting of 5698 Å bands 2=16847
 Mg grain boundary cavities, nucleation 3=17773
 Mg single crystals, prestrained, critical stress τ rel. to temp. in 82° to 320°K range 4=30780^B
 MgO, dislocations, rel. to neutron-irrad. 3=18185
 MgO, ²E state of V³⁺, splitting 3=23108
 MgO, rolling contact stresses, plastic deformation 3=23321
 Mn ferrites, effect on hysteresis loop 3=23189
 Mn²⁺ e. s. r. in MgO 4=30736
 Mo, grain boundary cavitation 4=20671
 Mo, stress state type, effect on ductile-to-brittle transition temp. 4=13427
 NaCl, absorption of u.s. 3=15491
 NaCl, CdCl₂-doped, strain ageing 3=16062
 NaCl—BaCl system, disloc. loops 3=17720
 Nb, on Lüders band velocity 4=23193
 Nb, point defects, tensile deform. 2=23151
 Nb₃Sn on Ni superconducting transition temps. 4=11476
 Nb₃Sn, thin surf. layers, rel. to superconductivity 3=1903
 Ni alloys, anhysteretic curves after demag. 3=11061

Stress effects—contd

- Ni containing Pb particles, dihedral angle 4=23533
 Ni, ferromagnetic permeability, angle effects 4=13185
 Ni, rate, effect on yield stress 4=4481
 Ni-steel, u.s. wave velocity 3=6471
 Ni, time decrease of reversible permeability 4=26318
 Ni wires, small torsion, mag. anisotropy 3=20577
 Ni—Cr films, strain sensitivity 3=23514
 Ni—Cr, on type of rupture 3=3239
 Ni—Fe alloys, ordering, strain ageing 3=8775
 Ni(79%)—Fe(17%)—Mo(4%), ferromagnetic permeability, angle effects 4=13185
 Pb, 1.4—77°K 1=12594
 PbS, rel. to electrical conductivity 3=10833
 PbSe, rel. to electrical conductivity 3=10833
 PbTe, rel. to electrical conductivity 3=10833
 SbSn system, rel. to ductility 4=23129
 Si, cond. and valence levels, general strain effects 4=4020
 Si-iron, magnetic texture 3=8663
 Si iron, tension, grain yielding 2=6724
 Si plate, X-ray transmitted diffraction intensity 3=23525
 Si, p—n junction, anisotropic 4=26074
 Si p—n jn., anisotropic, effect on current 4=28584
 Si, p—n junc., on characts. 4=22739
 Si, p—n junc., voltage breakdown lowered 4=22742
 Si reflection peak shift 4=20471
 Si transistor, current gain change 4=28603
 Si, uniaxial strain, on $J = \frac{1}{2}$ valence-band edge 3=4797
 Si, valence band structure and cyclotron res. 3=8414-15
 Si, X-ray diffr. intensity rel. to stress direction 2=21503
 3% Si—Fe, initial mag. curve, tension effects 3=25527
 Si—Fe, on mag. domain struct. 4=22994
 β -Sn, resistive stress for twin thickening 3=25659
 T(Al, Mg, Zn) system, rel. to ductility 4=23129
 Ta, point defects, tensile deform. 2=23151
 Ta—O, directional ordering, anelastic piezo-resistance 4=12847
 Ti alloys, β , phase transform., to martensitic α 4=17771
 W—Co alloys, brittle fracture and surface micro-hardness 2=23780
 Zn, cyclic, ductility and fracture 2=21428
 Zn, discontinuous yielding after prestrain 2=6738
 Zn, fatigued by direct stress 4=7466
 Zn, size effects and microstructure changes 4=13657
 Zn, work hardening and fracture 3=18200
